

DMTF Management Standards for Edge Virtual Bridging (EVB) and Network Port Profiles

Hemal Shah, Associate Technical Director, Broadcom Corporation
DMTF Platform Management Sub-Committee Chair
March, 2011

Agenda

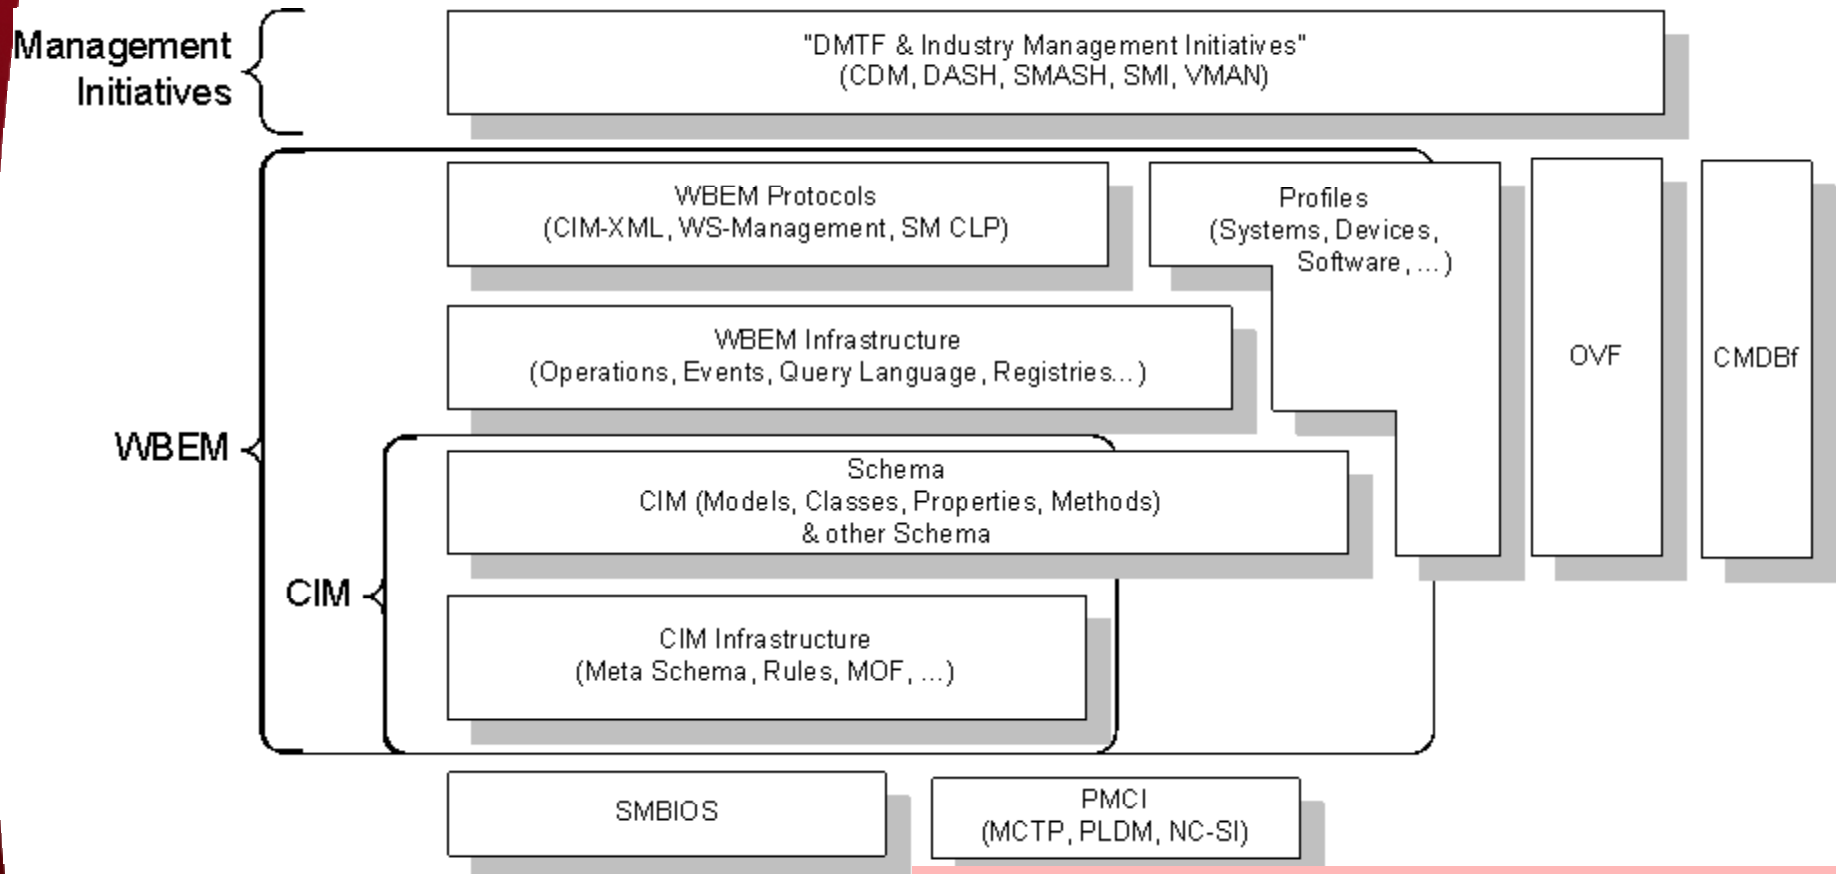

- DMTF Overview
- IEEE/DMTF Areas of Collaboration
- DMTF Standards for EVB Management and Network Port Profiles
- VM Lifecycle Management
- Open Virtualization Format (OVF)
- Network Port Profiles
- CIM Profiles for Virtual Networking

Distributed Management Task Force (DMTF)

- Develops management standards for enterprise and Internet environments
- Formed in 1992
- More than 4,000 active participants
 - from nearly 200 organizations in over 40 countries
- 3 Major committees and 25+ Working Groups/Forums
 - Committees: Technical, Marketing, Interoperability...
- Over a dozen Alliance Partners
 - SNIA, OGF/GGF, NGN, TMF, TCG, OASIS, etc.
- Developed standards & initiatives
 - CIM, CIM-XML, SMBIOS, CDM, ASF, SMASH, DASH, WS-Management...

DMTF Technology Diagram

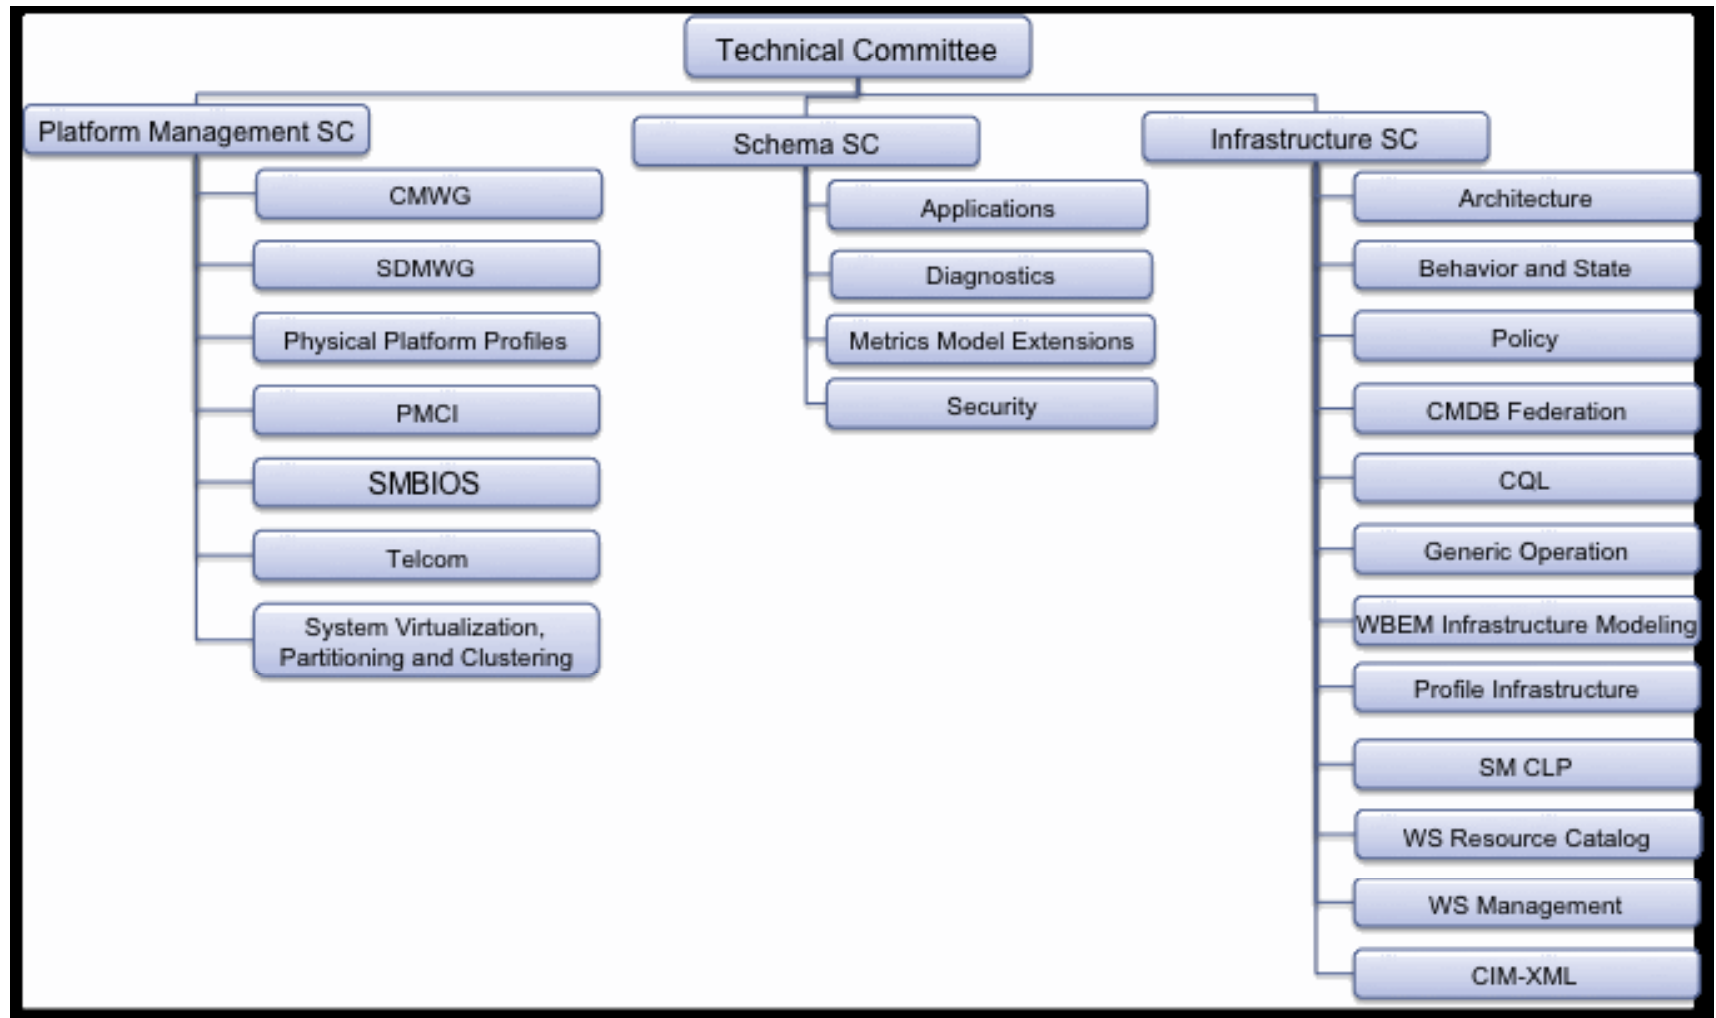

CIM – Common Information Model
WBEM – Web Based Enterprise Management
OVF – Open Virtualization Format
MOF – Managed Object Format
WS-Man – Web Services Based Management

DASH – Desktop and Mobile Architecture for System Hardware
SMASH – System Management Architecture for Server Hardware
SMI – Storage Management Initiative
CDM – Common Diagnostics Model
VMAN – Virtualization Management

DMTF Technical Committee Organization

<http://www.dmtf.org/about/working-groups>

Platform Management Sub-Committee Overview

- **Cloud Management Working Group (CMWG)**
 - Focuses on management interfaces between cloud service/consumer and cloud provider
- **Physical Platform Profiles (PPP) WG**
 - Defines platform independent, interoperable, industry standard management data models, profiles and registries for the aspects of managing the physical aspects of platforms
- **System Virtualization, Partitioning, and Clustering (SVPC) WG**
 - Defines platform independent, interoperable, industry standard management data models, profiles, formats and registries for the aspects of managing the virtualization aspects of platforms
- **Server, Desktop, and Mobile Working Group (SDMWG)**
 - Defines platform independent, interoperable, industry standard specifications for the management of server, desktop, and mobile platforms (owns DASH and SMASH wrapper specifications)
- **Platform Management Components Intercommunications (PMCI) WG**
 - Defines specifications for the "Inside the box" communication between components within the platform management subsystem
- **SMBIOS WG**
 - Defines SMBIOS specifications for low level platform asset information
- **Telco WG**
 - Defines specifications for the management of telecommunications systems, services, and applications

IEEE/DMTF Collaboration Areas

- **Network Port Profiles - SVPC WG**
 - Network Port Profile XML Schema
 - OVF Extensions for Network Port Profiles

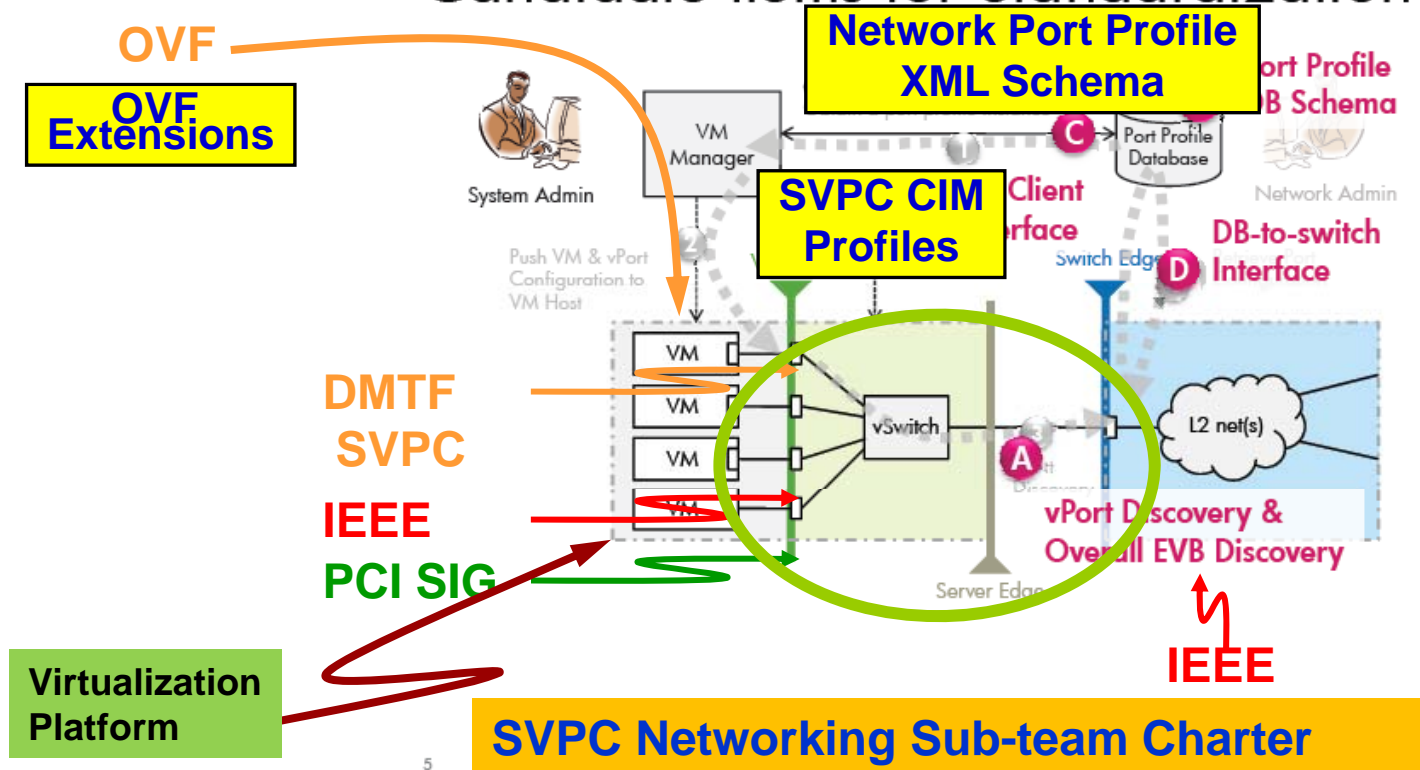

- **Edge Virtual Bridge (EVB) Management - SVPC WG**
 - CIM Schema Enhancements for EVB
 - CIM Profiles for EVB Management
 - Virtual Ethernet Switch and Ethernet Port Resource Virtualization Profiles

- **Data Center Ethernet (DCE) Management – PPP WG**
 - CIM Schema Enhancements for DCE
 - Priority-Based Flow Control (PFC) and Enhanced Transmission Selection (ETS) Initially
 - CIM Profiles for DCE Management
 - Ethernet Port and Data Center Ethernet Port Profiles

DMTF Standards for EVB Management and Network Port Profiles

Candidate Items for Standardization

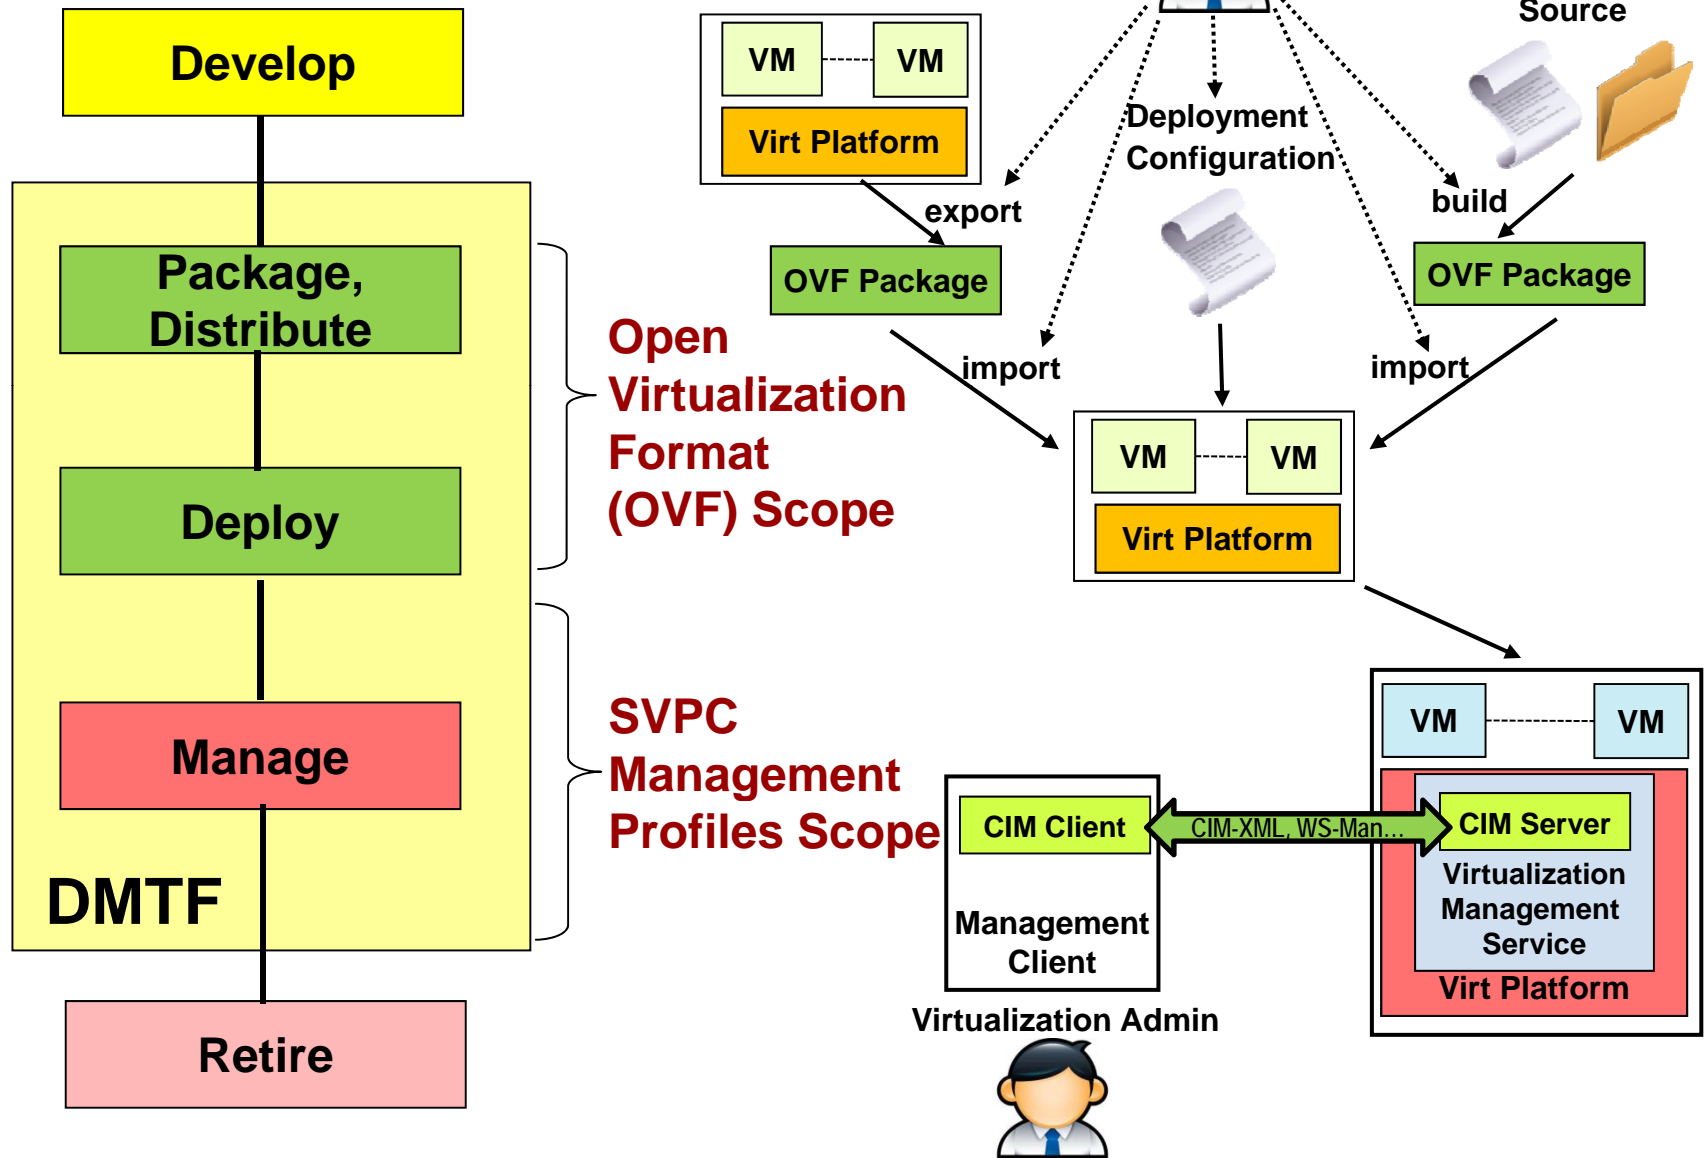

Virtualization Platform

SVPC Networking Sub-team Charter

1. GOAL 1: Define CIM-based data models to allow Management of Network and Storage Networking on the Virtualization Platform
2. GOAL 2: Define OVF extensions in support of Network and Storage Networking deployment on the Virtualization Platform
3. GOAL 3: Define Port Profile XML Schema, for describing VSI Network attributes

VM Lifecycle Management

Open Virtualization Format (OVF)

- OVF
 - A distribution format for VMs
 - Supports single VM & multiple VM configs
 - Optimized for distribution & simple automation
 - Vendor and platform independent
- An OVF package consists of
 - One OVF descriptor with extension .ovf
 - zero or one OVF manifest (w/ extension .mf)
 - zero or one OVF certificate (w/ extension .cert)
 - zero or more disk image files
 - zero or more additional resource files
 - such as ISO images

An OVF Example

```
<Envelope ...>...
  <VirtualSystemCollection>
    ... Description of VMs
    <VirtualSystem>
      ...Description of a VM
    </VirtualSystem>
  </VirtualSystemCollection>
</Envelope>
```

```
<VirtualHardware>
  <Info>...</Info> Description of system
  <System> ... </System>
  <Item> Description /Item>
  <Item> of CPU/Mem /Item>
</VirtualHardware>
```

```
<DiskSection>
  ... Description of Virtual Disks
  <Disk ovf:id="webDisk"
    ovf:fileRef="web"
    ovf:capacity="..." />
</DiskSection>
```

```
<DeploymentOptionSection>
  ... Description of Deployment
  configuration options
</DeploymentOptionSection>
```

```
<StartupSection>
  ... Description of
  startup sequence
</StartupSection>
```

```
<ProductSection>
  ... App Config
</ProductSection>
```

```
<EulaSection>
  .. Licensing Info
</EulaSection>
```

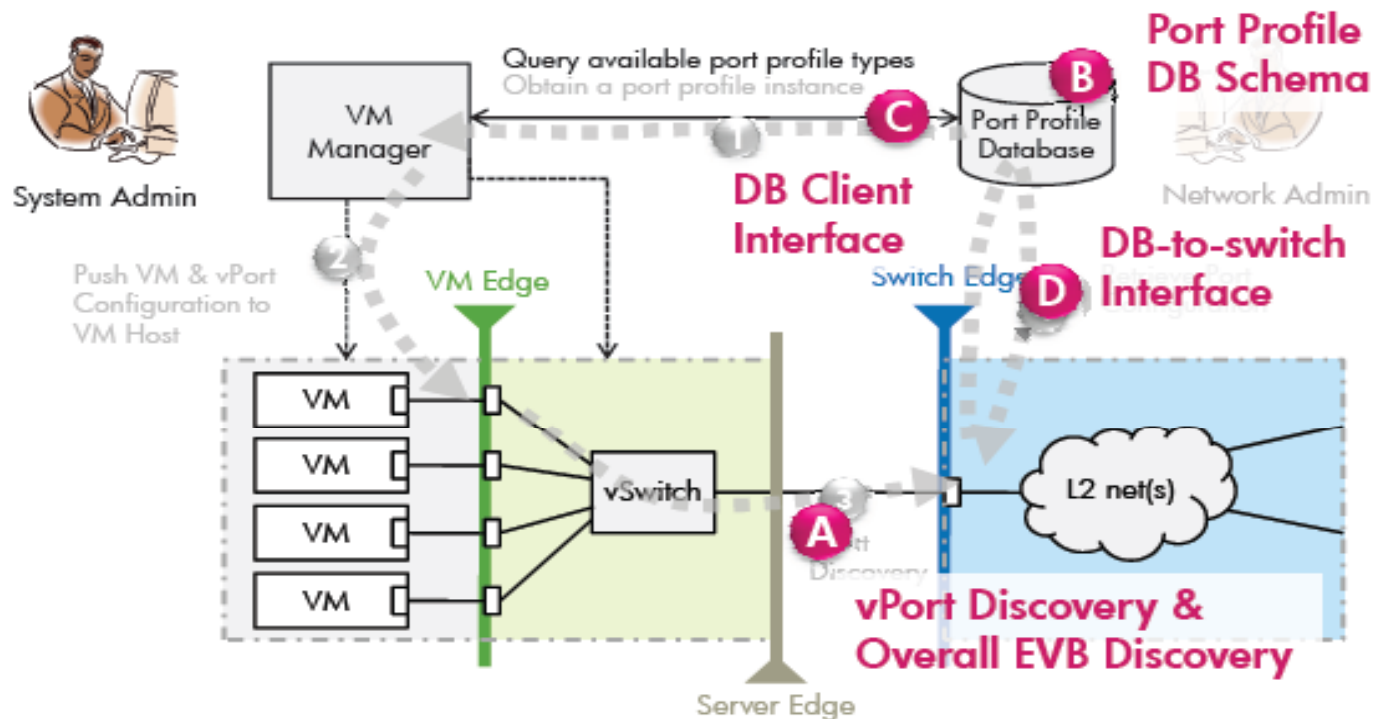

```
<NetworkSection>
  ... Description of
  VM connectivity
</NetworkSection>
```

Network Port Profile

Life Cycle of Network Port Profile

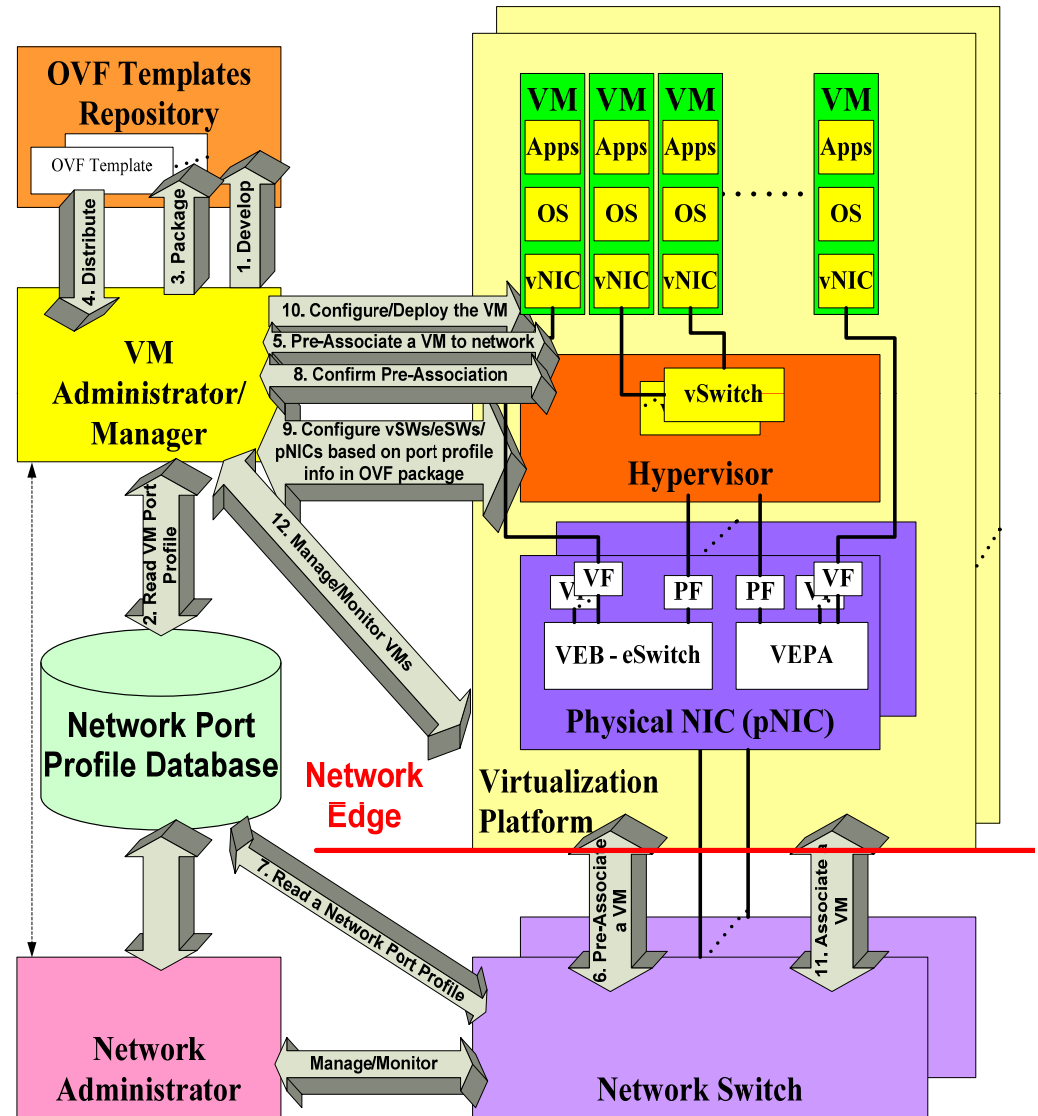

Network Port Profile

Refers to a set of network attributes that can be applied to one or more virtual machines

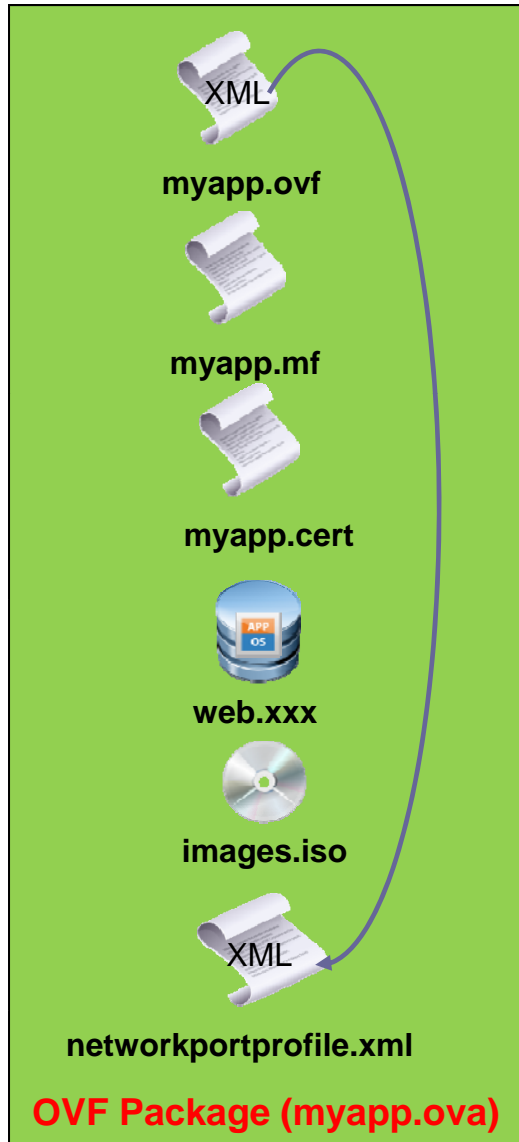

Network Port Profile Use Case

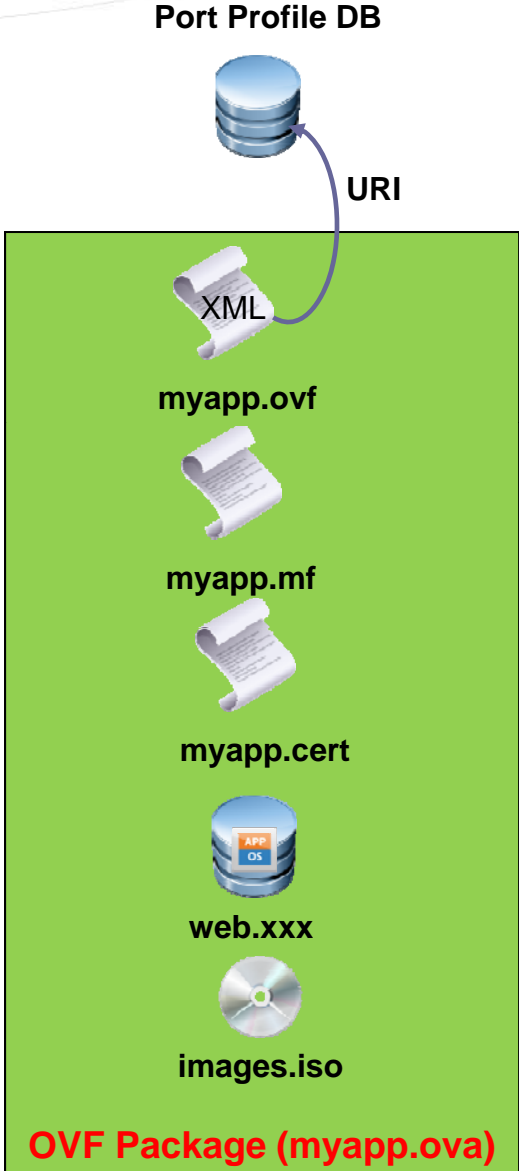

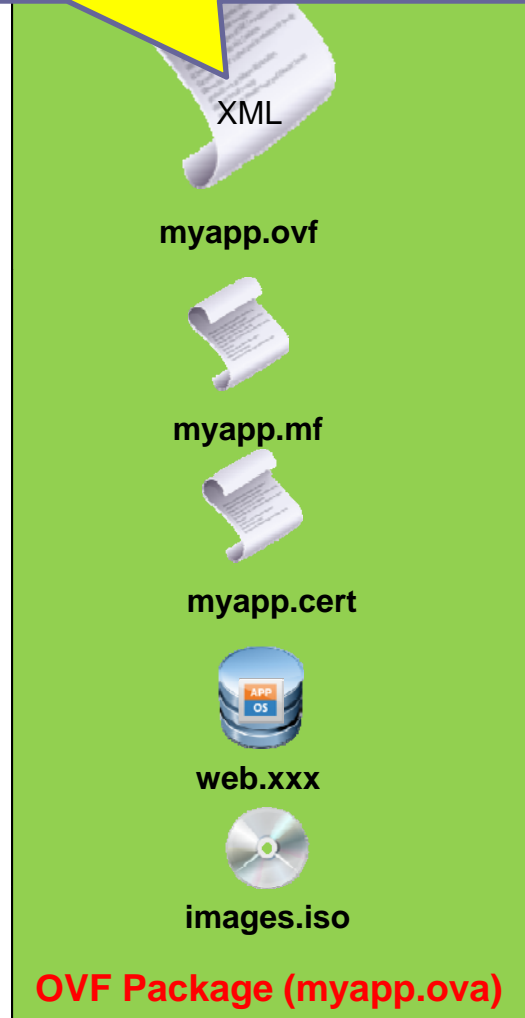

- Network Infrastructure is not pre-provisioned
- Network switch accesses port profile DB during VM deployment
- Network Port profile info is in the OVF package
- VM Admin understands port profile metadata and schema
- VM admin/Manager applies port profile config during VM deployment
- At the deployment time, VM Admin/Manager does not access Port Profile DB

Network Port Profile and OVF

```
.....  
<epasd:Address>00-16-8B-DB-00-5E</epasd:Address>  
<rasd:AllocationUnits>GigaBits per Second  
</rasd:AllocationUnits>  
<rasd:Reservation>1</rasd:Reservation>  
.....
```

Network Port Profile Schema Proposal

```
<xs:schema xmlns:ppns="http://schemas.dmtf.org/svpc/portprofile/1"
  xmlns:xs="http://www.w3.org/2001/XMLSchema"
  xmlns:cim="http://schemas.dmtf.org/wbem/wscim/1/common"
  xmlns:xml="http://www.w3.org/XML/1998/namespace"
  xmlns:rasd="http://schemas.dmtf.org/wbem/wscim/1/cim-schema/2/CIM_ResourceAllocationSettingData"
  xmlns:epasd="http://schemas.dmtf.org/wbem/wscim/1/cim-schema/2/CIM_EthernetPortAllocationSettingData"
  xmlns:ns1="http://schemas.dmtf.org/svpc/portprofile/1"
  targetNamespace="http://schemas.dmtf.org/svpc/portprofile/1" elementFormDefault="qualified" attributeFormDefault="qualified">
  <xs:import namespace="http://www.w3.org/XML/1998/namespace" schemaLocation="http://www.w3.org/2001/xml.xsd"/>
  <xs:import namespace="http://schemas.dmtf.org/wbem/wscim/1/common"
    schemaLocation="http://schemas.dmtf.org/wbem/wscim/1/common.xsd"/>
  <xs:import namespace="http://schemas.dmtf.org/wbem/wscim/1/cim-schema/2/CIM_ResourceAllocationSettingData"
    schemaLocation="http://schemas.dmtf.org/wbem/wscim/1/cim-schema/2.22.0/CIM_ResourceAllocationSettingData.xsd"/>
  <xs:import namespace="http://schemas.dmtf.org/wbem/wscim/1/cim-schema/2/CIM_EthernetPortAllocationSettingData"
    schemaLocation="http://schemas.dmtf.org/wbem/wscim/1/cim-schema/2.27.0/CIM_EthernetPortAllocationSettingData.xsd"/>
  .....
  <xs:element name="PortProfile">
    <xs:annotation>
      <xs:documentation>Root element of Port Profile </xs:documentation>
    </xs:annotation>
    <xs:complexType>
      <xs:sequence>
        <xs:element name="Item" type="epasd:CIM_EthernetPortAllocationSettingData_Type" minOccurs="0" maxOccurs="unbounded"/>
        <xs:any namespace="##other" processContents="lax" minOccurs="0" maxOccurs="unbounded"/>
      </xs:sequence>
    </xs:complexType>
  </xs:element>
</xs:schema>
```

Network Port Profile Examples

Bandwidth Reservation

```
<?xml version="1.0" encoding="UTF-8"?>
<ppns:PortProfile ...>
  <epasd:NetworkPortProfileID>http://www.dmtf.org/portporfiles</epasd:NetworkPortProfileID>
  <epasd:NetworkPortProfileIDType>2</epasd:NetworkPortProfileIDType>
  <epasd:Address>00-16-8B-DB-00-5E</epasd:Address>
  <rasd:AllocationUnits>GigaBits per Second</rasd:AllocationUnits>
  <rasd:Reservation>1</rasd:Reservation>
</ppns:PortProfile>
```

Allowed MAC/VLAN Pairs

```
<?xml version="1.0" encoding="UTF-8"?>
<ppns:PortProfile ....>
  <epasd:NetworkPortProfileID>http://www.dmtf.org/portporfiles</epasd:NetworkPortProfileID>
  <epasd:NetworkPortProfileIDType>2</epasd:NetworkPortProfileIDType>
  <epasd:AllowedToTransmitMACAddresses>00-16-8B-DB-00-5E</epasd:AllowedToTransmitMACAddresses>
  <epasd:AllowedToTransmitMACAddresses>00-17-8B-DA-00-5E</epasd:AllowedToTransmitMACAddresses>
  <epasd:AllowedToTransmitVLANs> 5 </epasd:AllowedToTransmitVLANs>
  <epasd:AllowedToTransmitVLANs> 7 </epasd:AllowedToTransmitVLANs>
</ppns:PortProfile>
```

Note: MAC/VLAN Pairs are represented as indexed arrays.

Allowed Priorities

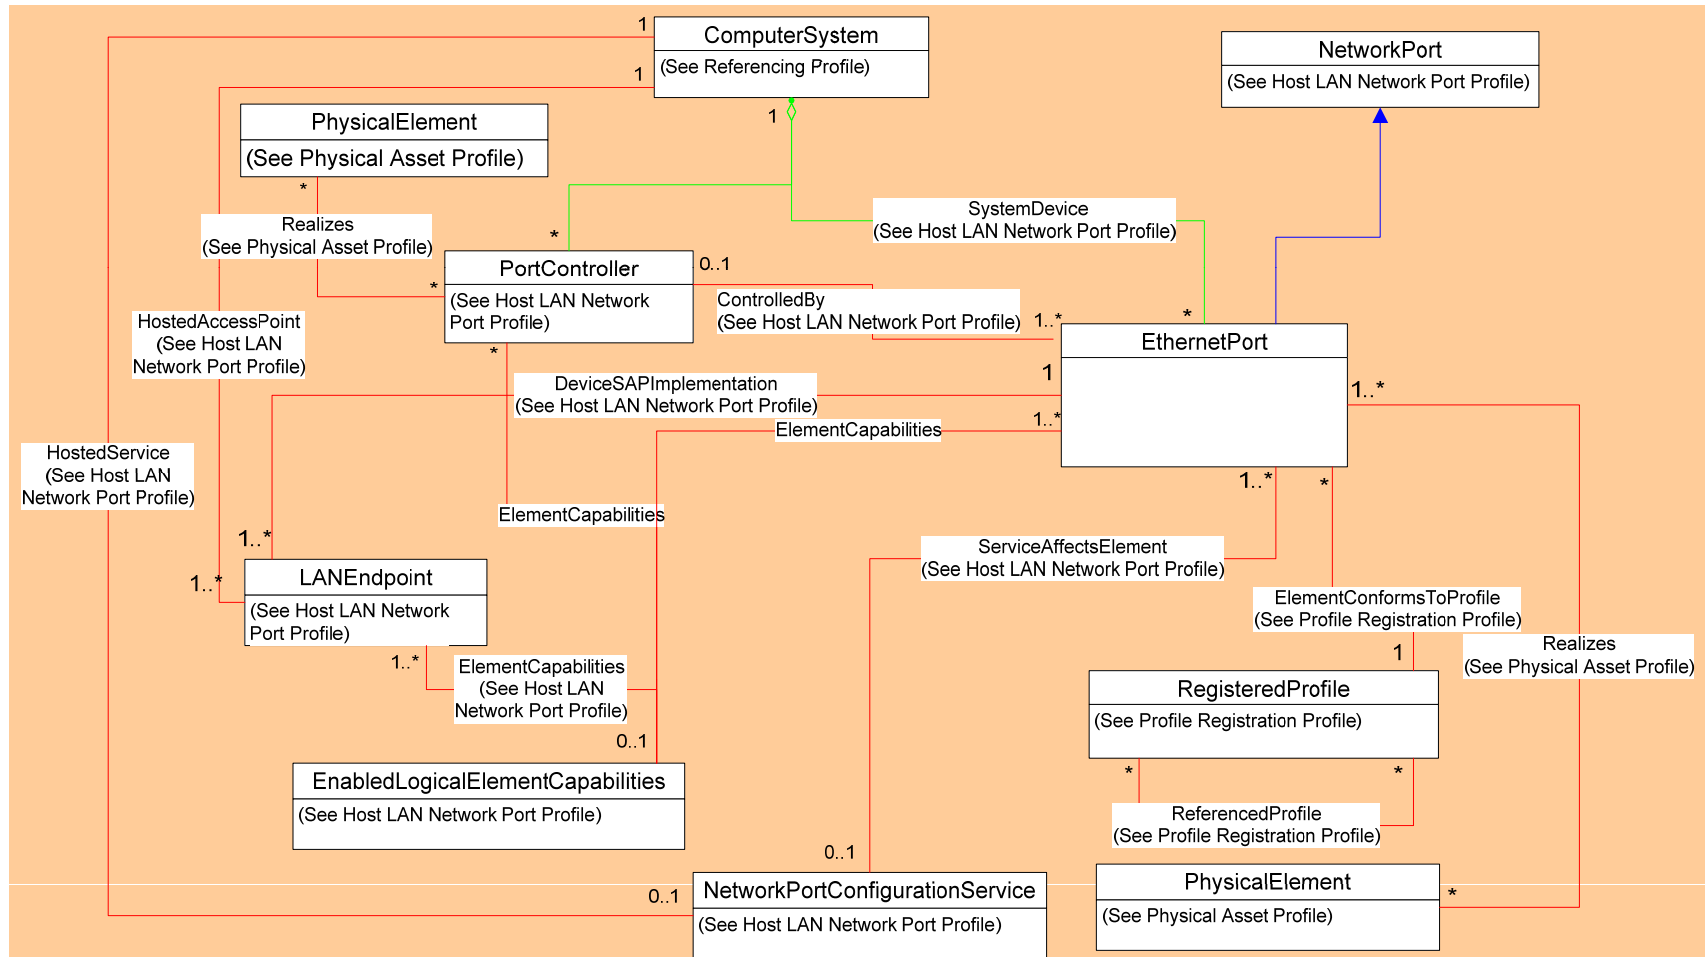

```
<?xml version="1.0" encoding="UTF-8"?>
<ppns:PortProfile....>
  <epasd:NetworkPortProfileID>http://www.dmtf.org/portporfiles</epasd:NetworkPortProfileID>
  <epasd:NetworkPortProfileIDType>2</epasd:NetworkPortProfileIDType>
  <epasd:AllowedPriorities>3</epasd:AllowedPriorities>
  <epasd:AllowedPriorities>5</epasd:AllowedPriorities>
</ppns:PortProfile>
```

Management Profiles for EVB/DCB Proposal

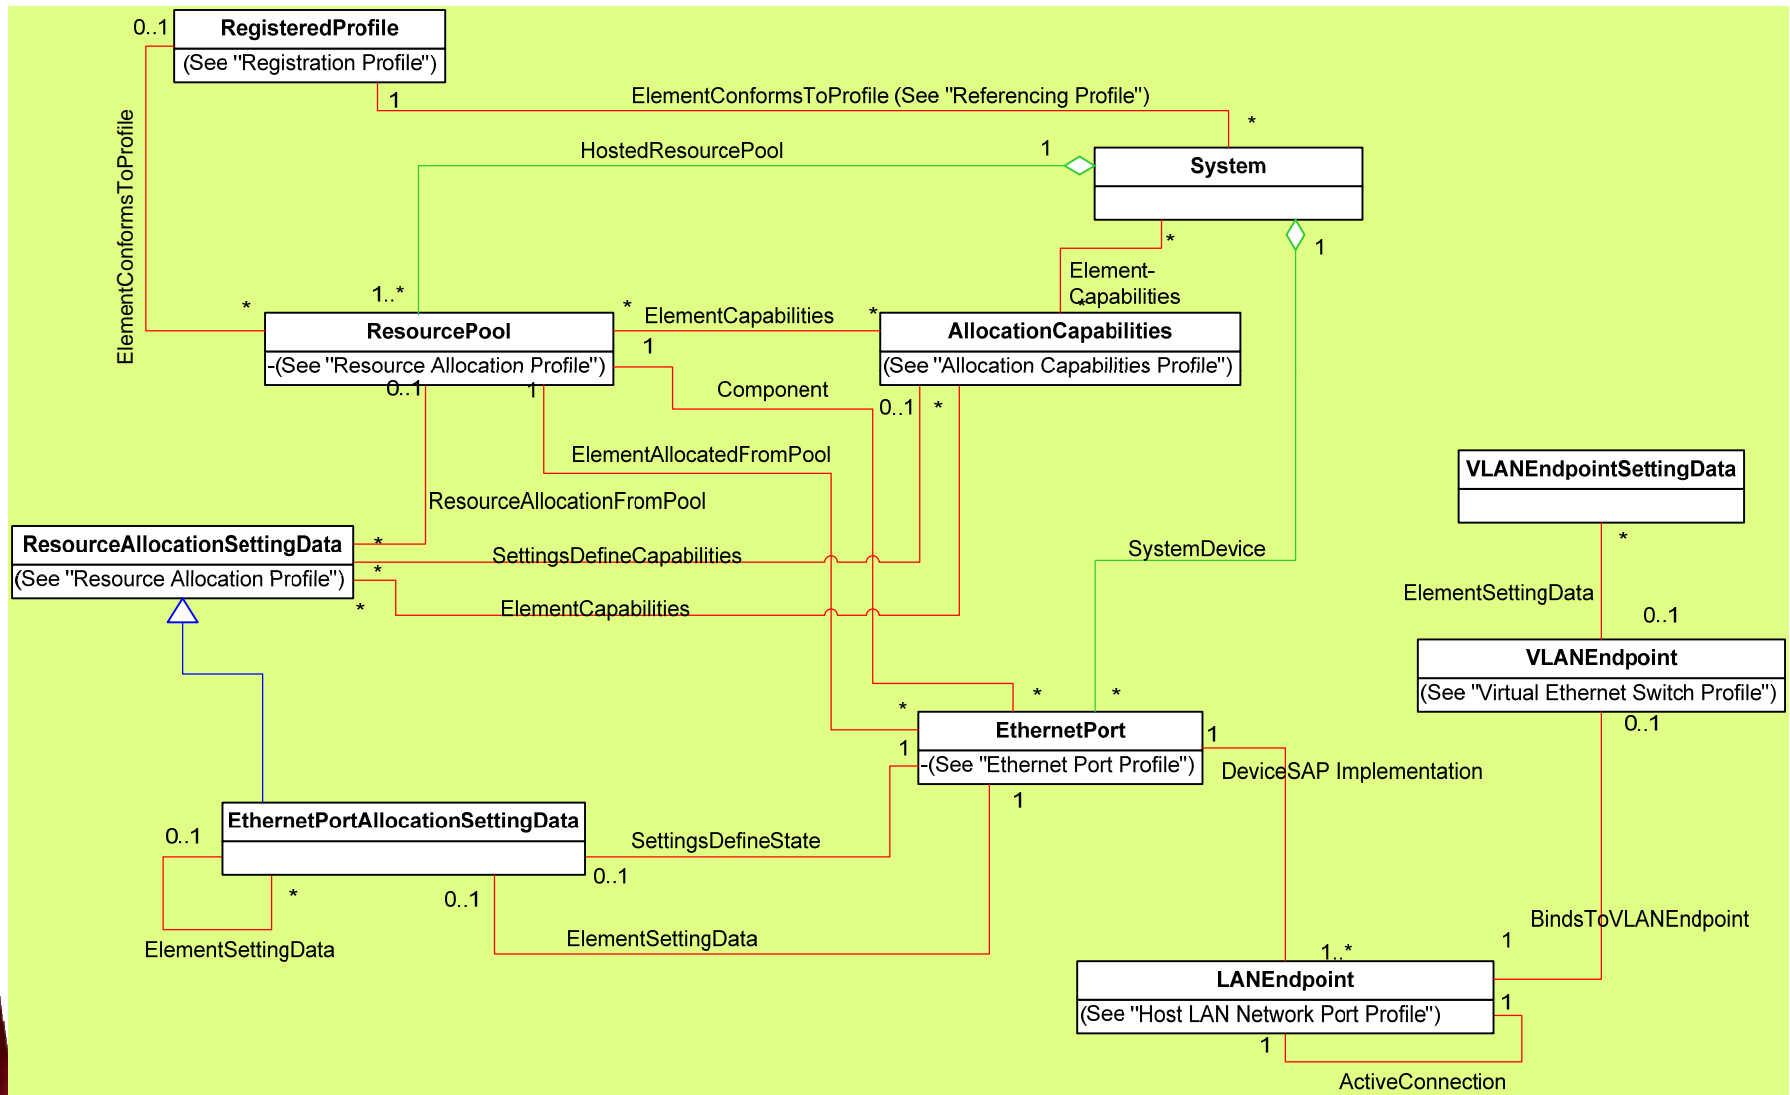

- **Models Ethernet Port Resource Virtualization/Virtual Ethernet Switch**
- **Specifically, covers**
 - Ethernet adapters (vNIC) – each adapter modeled as an Ethernet Port
 - Virtual Ethernet Switch and switch settings
 - Ethernet switch ports (vSwitch)
 - Connections between vNIC and vSwitch Ports
 - VLANs
 - Port characteristics, settings (MAC, speed, duplex..), statistics...
- **Already Published CIM Profiles**
 - DSP1014 Ethernet Port Profile
 - DSP1050 Ethernet Port Resource Virtualization Profile
 - DSP1097 Virtual Ethernet Switch Profile
