

Requirements for VLANs

802.1 Interim Meeting
October 1995

David Cullerot
Cabletron Systems, Inc.

1

What do customers expect from VLANs?

- Simplification of user adds, moves and changes
- Plug & play ease of use
- Broadcast scoping/containment
- Operation independent of network protocols (multi-protocol support)
- Operation independent of LAN technologies and topologies
- Flexibility (ie. user, server or router interface in 1 or more VLANs)
- Full compatibility with their existing network adapters, hubs, bridges, routers and switches
- Provide migration to emerging technologies (ie. LAN switching, ATM)

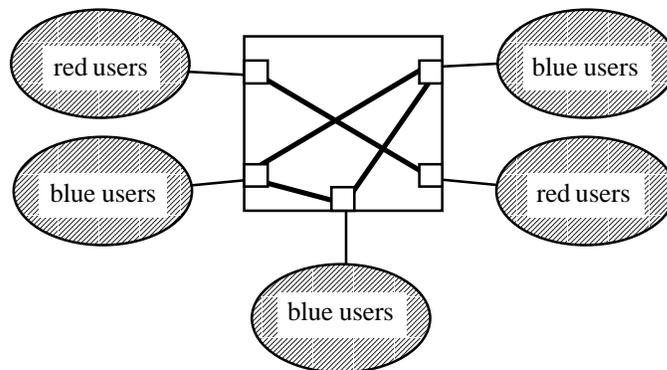

2

Types of VLANs

- Port Assigned VLANs (PVC-like)
 - Relatively static environment
 - Not ‘user oriented’
 - Tagging oriented or Directory via MAC wildcarding on port
- MAC Address Assigned VLANs (SVC-like)
 - Dynamically changing environment
 - User oriented assignment
 - Allows for user mobility
 - Flexibility
 - Directory oriented

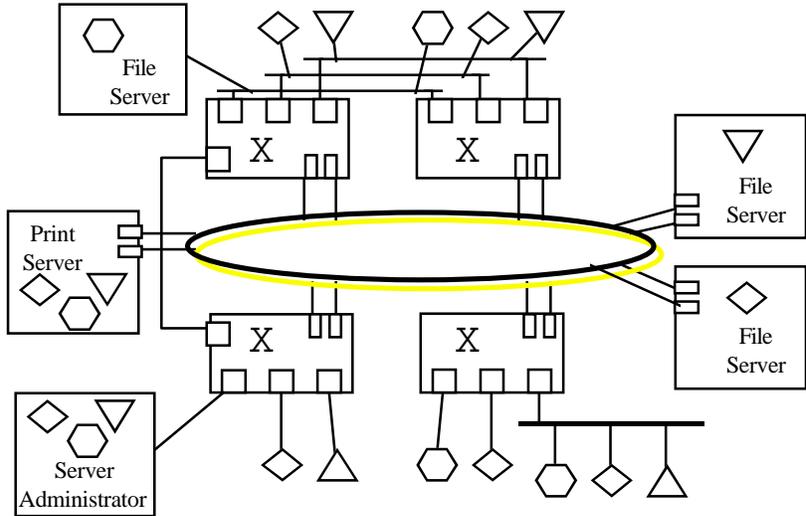

3

Port Assigned VLANs

4

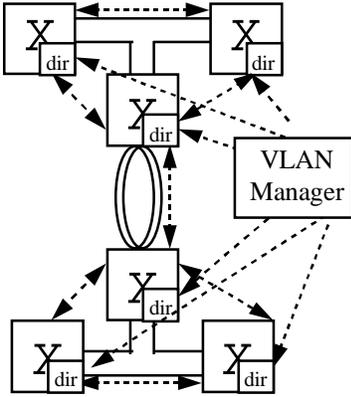

MAC Address Assigned VLANs

5

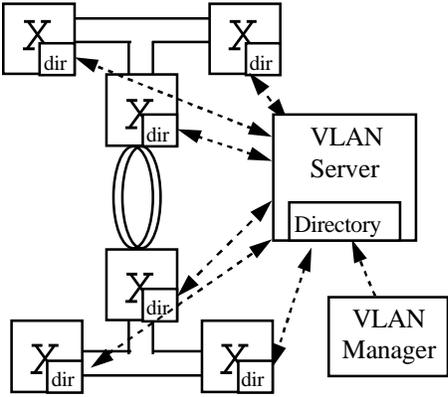

VLAN Directory

Distributed Peer-to-peer

- Simplicity for network provider

Distributed Server-to-client

- Scalability for network provider
