

802.1Qav Shaped traffic and MoCA™ Media Access Latency

Philippe Klein

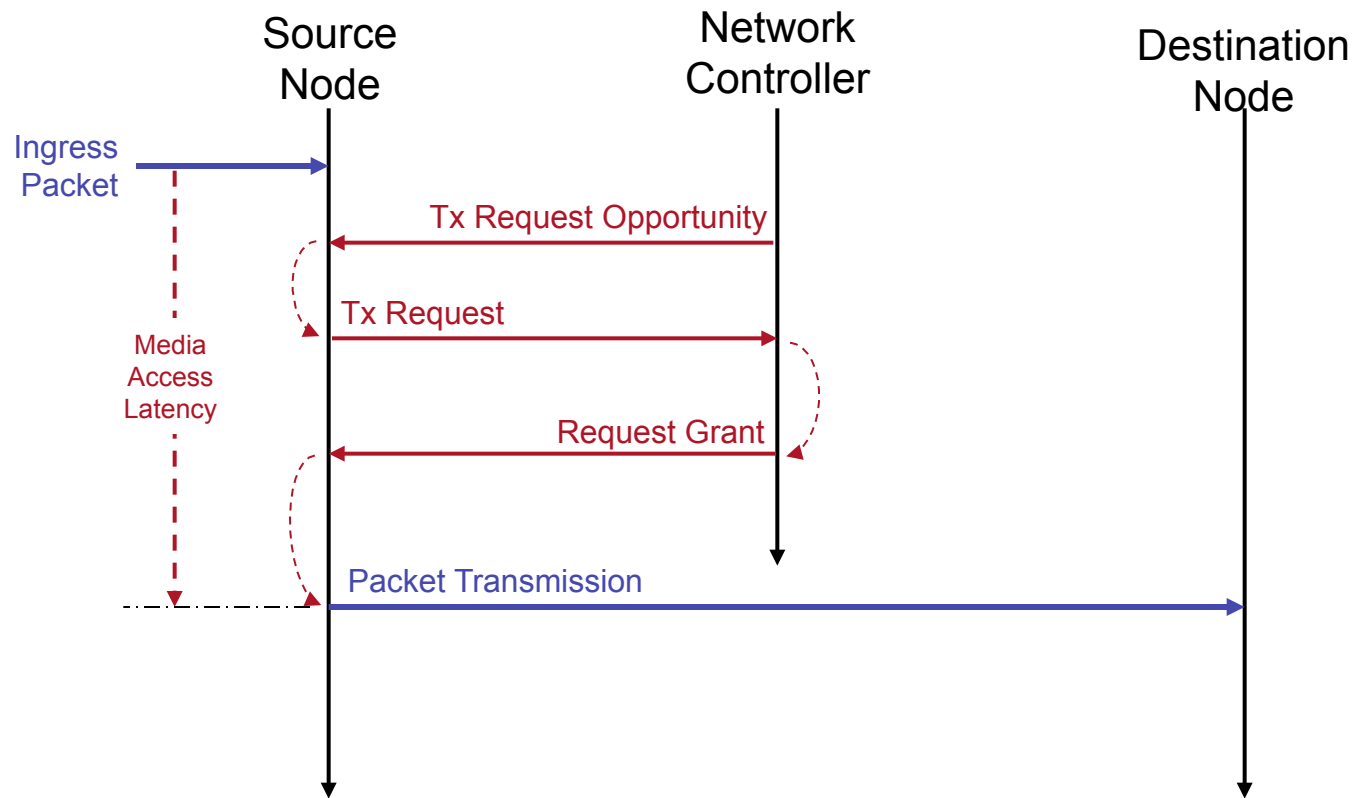

IEEE Interim Meeting – May 09 Pittsburg, PA

avb-phkl-qav-0905-v01

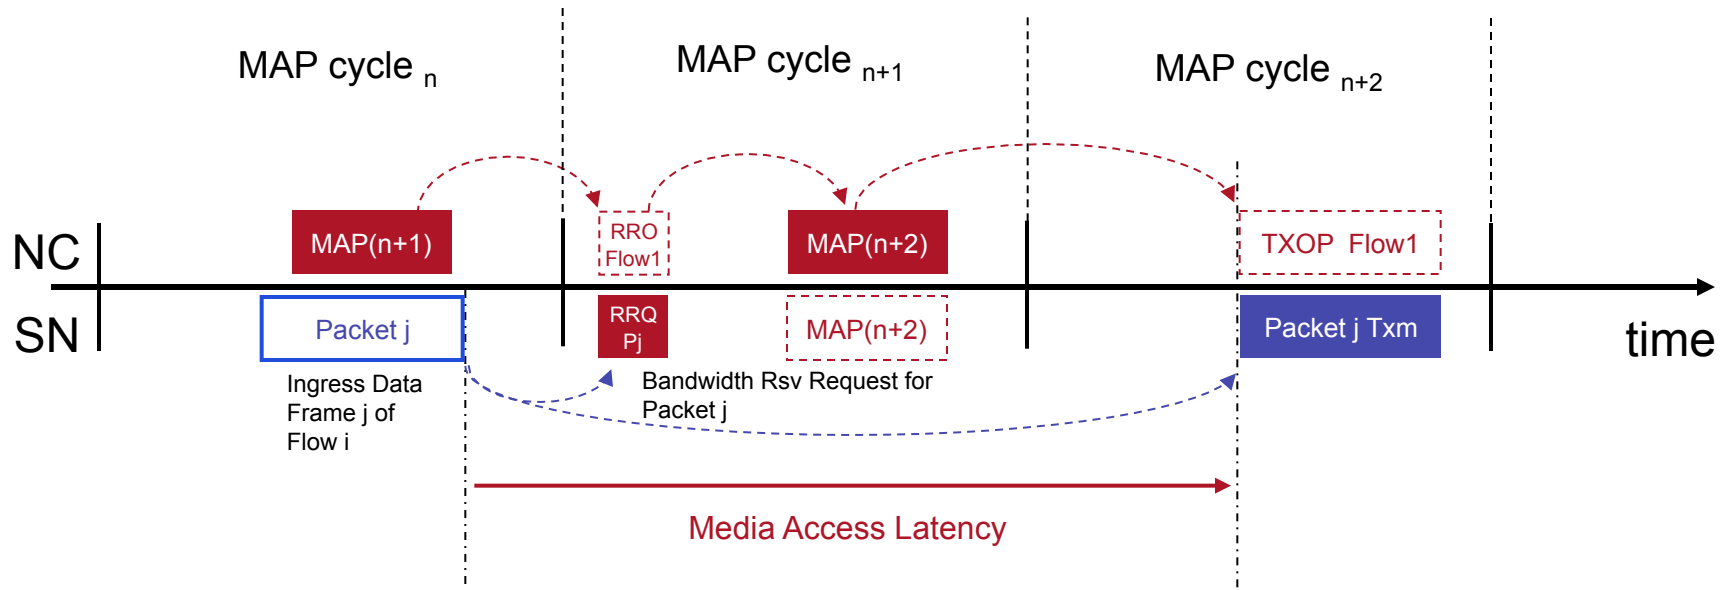

Abstract

- Does MoCA media access latency affects .Qav shaped traffic ?
 - *I guess not but let double check together*

MoCA Media Access

MoCA Solicited Media Access

- Worse case latency: 3 MAP cycles = 3 mS
- Could be “theoretically” reduced to 1mS with unsolicited or pre-requested TXOP based on the flow’s pQoS TSPEC (not currently specified in MoCA)
