5.1 Approximate number of people expected to be actively involved in the development of this project: 20
5.2.a. Scope of the complete standard: This standard specifies Bridges that interconnect individual Local Area Networks (LANs), each supporting the IEEE 802 Media Access Control (MAC) service using a different or identical media access control method, to provide Bridged Networks and Virtual LANs (VLANs).

5.2.b. Scope of the Proposed changes: Correction of technical and editorial errors identified by the IEEE 802.1 maintenance activity, documented at http://www.ieee802.org/1/maint.html.

5.3 Is the completion of this standard dependent upon the completion of another standard: 
5.4 Purpose: Bridges, as specified by this standard, allow the compatible interconnection of information technology equipment attached to separate individual LANs.

5.5 Need for the Project: The IEEE 802.1 maintenance activity has identified a small number of corrections to the base text that are needed in order to correct technical and/or editorial errors in the existing text. The corrigendum will correct these errors.

5.6 Stakeholders for the Standard: Manufacturers, distributors, and users of LAN equipment and services.
