**5.1 Approximate number of people expected to be actively involved in the development of this project:** 40

**5.2 Scope:** This standard defines time-sensitive networking profiles for industrial automation. The profiles select features, options, configurations, defaults, protocols, and procedures of bridges, end stations, and LANs to build industrial automation networks.

**5.3 Is the completion of this standard dependent upon the completion of another standard:** Yes

**If yes please explain:** IEEE P802.1AS-Rev: This standard will use time synchronization being specified by IEEE P802.1AS-Rev.

**5.4 Purpose:** This document will not include a purpose clause.

**5.5 Need for the Project:** IEEE 802 standards address a very wide range of networking scenarios. Users and vendors of interoperable bridged time-sensitive networks for industrial automation need guidelines for the selection and the use of IEEE 802 standards and features in order to be able to deploy converged networks to simultaneously support operations technology traffic and other traffic.

**5.6 Stakeholders for the Standard:** Developers, providers, vendors, and users of networking services and components for industrial automation equipment. These components may include bridges, end stations, network interface cards, and integrated circuits.
