Draft Status

• Draft 1.1 is ready for review and incorporates
  • The restructuring discussed during comment resolution.
  • Contribution for Clause 4.1.1, Control loop operation (now clause 6.1.1).
  • Contributions for Time synchronization and “hot/cold swap”
  • Contribution for a proposed management model.

• The following comment resolutions are not reflected in this draft:

• Awaiting contributions for Traffic Types, security and Quantities/Parameters/Data Sheets
Management Contribution

- The editor has attempted to replicate the content and intent of the contribution but has changed terminology to reflect existing IEEE 802.1 standards. Any misrepresentation of the original contribution is unintentional.
Management Contribution
Management Contribution

- The Topology Discover Engine (TDE) - The topology discovery engine is responsible for the topology discovery and bridge/end station identification.

- The Industrial Automation Path Establishment Entity (IA-PE) – This entity is responsible for the establishment and control of explicit paths through the network.

- The Best Management Entity (BME) - The BME is responsible for the management of the active IA-ME. If multiple IA-ME are detected, one is selected.

- The Query Stream Server (QSS) – The QSS is a network management engine server responsible for:
  - the handling of Query Path requests
  - the forwarding of Query Path requests to its CUC
  - the establishment of the path

- Together with the CNC and CUC, these entities comprise the IA-ME (Industrial Automation Management Entity).
Management Contribution

• Arguably, the TDE and the IA-PE could be considered part of the CNC since Qcc implies that the CNC has an understanding of paths and topology.

• Likewise, the QSS could be considered an extension of the CUC.

• For the purpose of this draft, the editor has attempted, to the extent practical, to maintain the partitioning proposed by the original contributor while expressing the model in terms familiar to reader of IEEE 802 standards.
• With over 600 comments, comment resolutions were sometime contradictory.
  • Disposition of a later comment in conflict w/ disposition of an earlier comment.
  • Comment Disposition rendered meaningless by the restructuring.
  • Comment disposition addressed, sometimes obliquely, by a subsequent contribution.
  • Frankly, I may have missed some things.

• The editor has reconciled these contradictions to the best of his ability.

• Any omission of a resolution is inadvertent and will be resolved on subsequent ballots.
Restructuring
