

IEEE 802.1 Maintenance Interim

Initially held via Phone conference, continued in Hawaii

Hawaii

March 6 & March 14, 2012

3/6 - Minutes

1. The chair read the patent policy and made the call for patents. There were no responses to the call for patents
2. General items
 - a. Paul is finished after March. Will assist in training on maintenance process
 - b. Q-Cor-2 would like to go to WG ballot after the Hawaii meeting, so we will close the door on all new items going into this draft after the meeting.
 - c. The current plenary maintenance meeting is scheduled for Tuesday night, but with the light schedules in DCB and Interworking, we will target a day meeting.
3. Review of status:
 - a. 6 new maintenance items since January
 - b. Sponsor ballots for Qbg, aq are likely to go to RevCom after next meeting closing several items.
 - c. Another TG ballot for Q-cor-2 was completed and several comments were addressed.
4. New items were discussed in detail (see slides and web-site for details). Several from Maarten will be considered for a future revision of Q and may require significant restructuring, but only to add clarifications.
5. Open items were reviewed and updated. See the slides and web-site for details and discussion.
6. A few text proposals will be reviewed at the plenary.

3/14 - Minutes

1. The chair reminded the TG of the patent policy and made the call for patents. There were no responses to the call.
2. We continued process the status updates.
 - a. Anoop proposed text for 0021. The note was presented and agreed to as documented on the web-site. This may need some word smithing.
 - b. Steve Haddock proposal for 0025. The group agreed to insert a Note that clarifies that connection_identifier is a 1:1 mapping and not learning is implied.
 - c. Agreement on path for 0027. The group agreed to proceed with the current recommendation documented in the maintenance item itself
 - d. Ben Mack-Crane proposed text for 0029. The port creation text for the T-Component is much more complex than initially anticipated. The enumeration in the MIB is most

important so we will include that change and the T-Component creation sub-clause (trivial), but not add the port creation text.

- e. We agreed to leave 0023 and 0026 in the 'Received' state and Maarten will consider a future contribution to progress these or cause them to be withdrawn/rejected.
3. Tony resolved the ballot comments on the last TG ballot of Q-Cor-2
