Evaluation items for PHY

Following subjects should be taken into account

- Frame Error Rate
 - (we should establish data frame model for evaluation)
 - Power consumption
 - (including microwave section)
 - Hardware size
 - (e.g. gate number of baseband digital circuit)

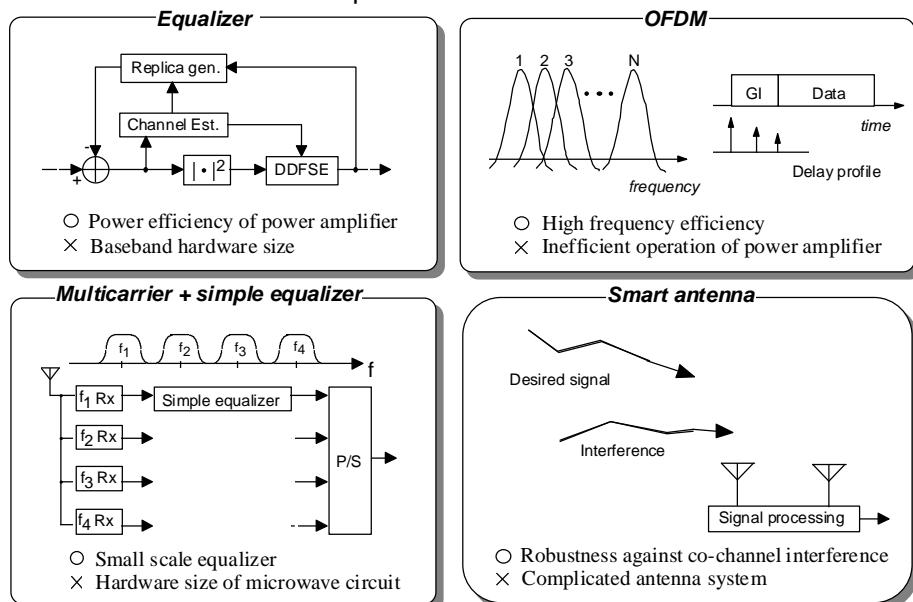

Examples of Multipath Channel Model

NTT

Multipath countermeasure

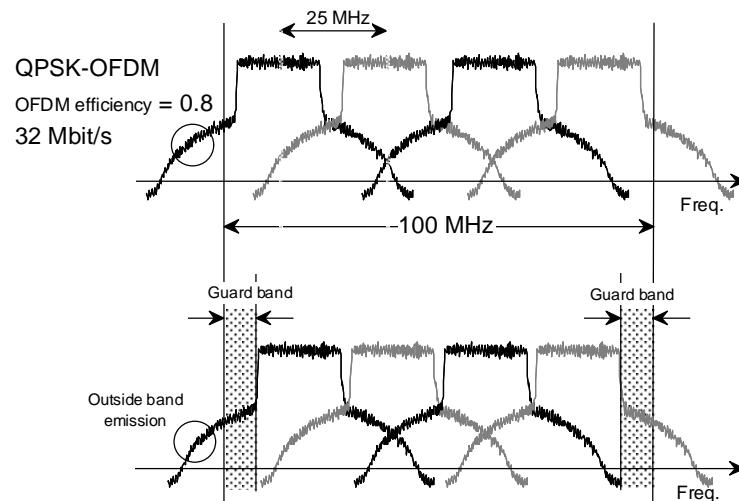

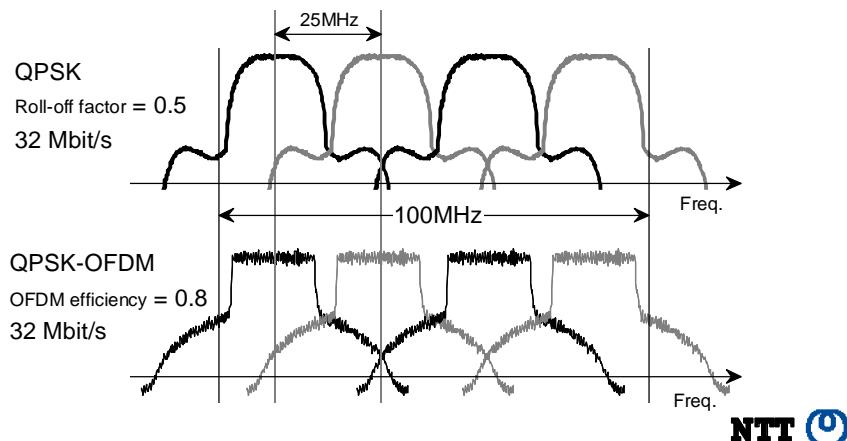

NTT

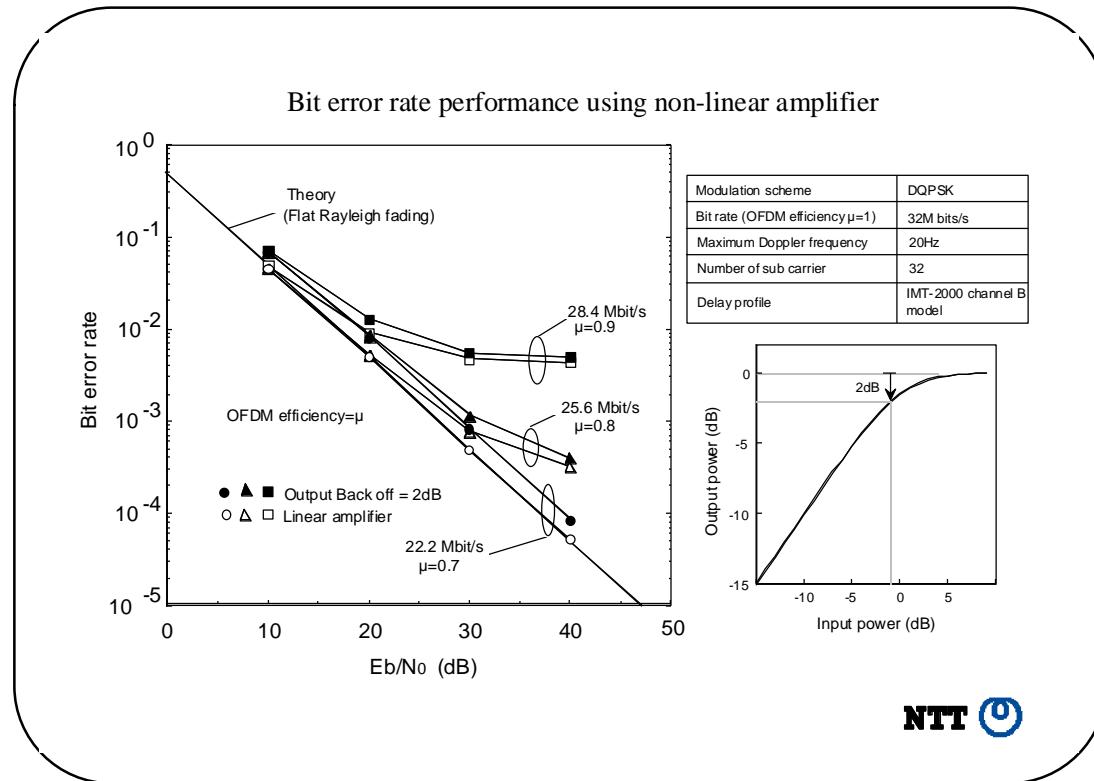

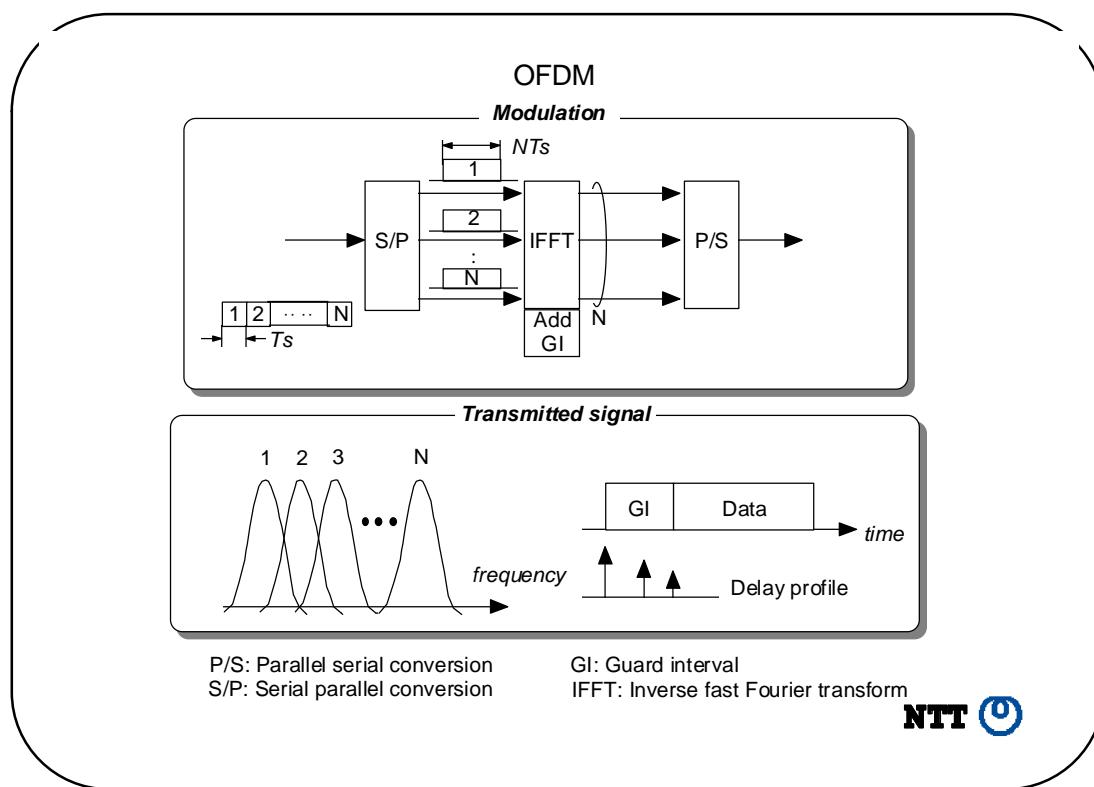

Examples of Frequency Allocation Plan

U-NII bands 5.15 - 5.25 GHz (100MHz)
 5.25 - 5.35 GHz (100MHz)
 5.725 - 5.825 GHz (100MHz)

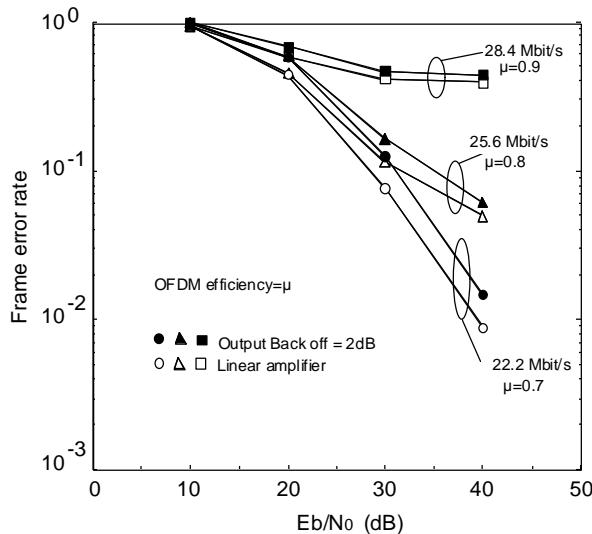

Four carriers in each 100 MHz band

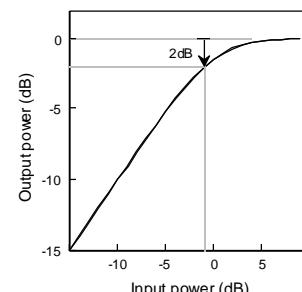

NTT (Logo)

Frame error rate performance using non-linear amplifier

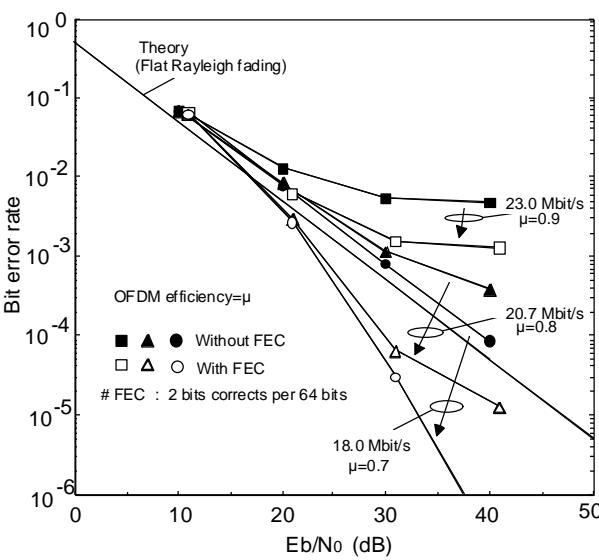

Modulation scheme	DQPSK
Bit rate (OFDM efficiency $\bar{\mu} = 1$)	32M bits/s
1 frame	448bits
Maximum Doppler frequency	20Hz
Number of sub carrier	32
Delay profile	IMT-2000 channel B model

NTT

Bit error rate performance of OFDM with forward error correction

Modulation scheme	DQPSK
Bit rate (OFDM efficiency $\bar{\mu} = 1$)	32 Mbit/s
1 frame	448 bits
Maximum Doppler frequency	20Hz
Number of sub carrier	32
Delay profile	IMT-2000 channel B model
Back off of power amp	2dB
