Venue:

IEEE 802.16 Session #47, London, UK

Base Document:

IEEE C802.16j-07/150 http://dot16.org/CSUupload//upload/Relay_db/C80216j-07_150.pdf

Purpose:

This document is provided as input for the IEEE802.16j amendment.

Notice:

This document has been prepared to assist IEEE 802.16. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.

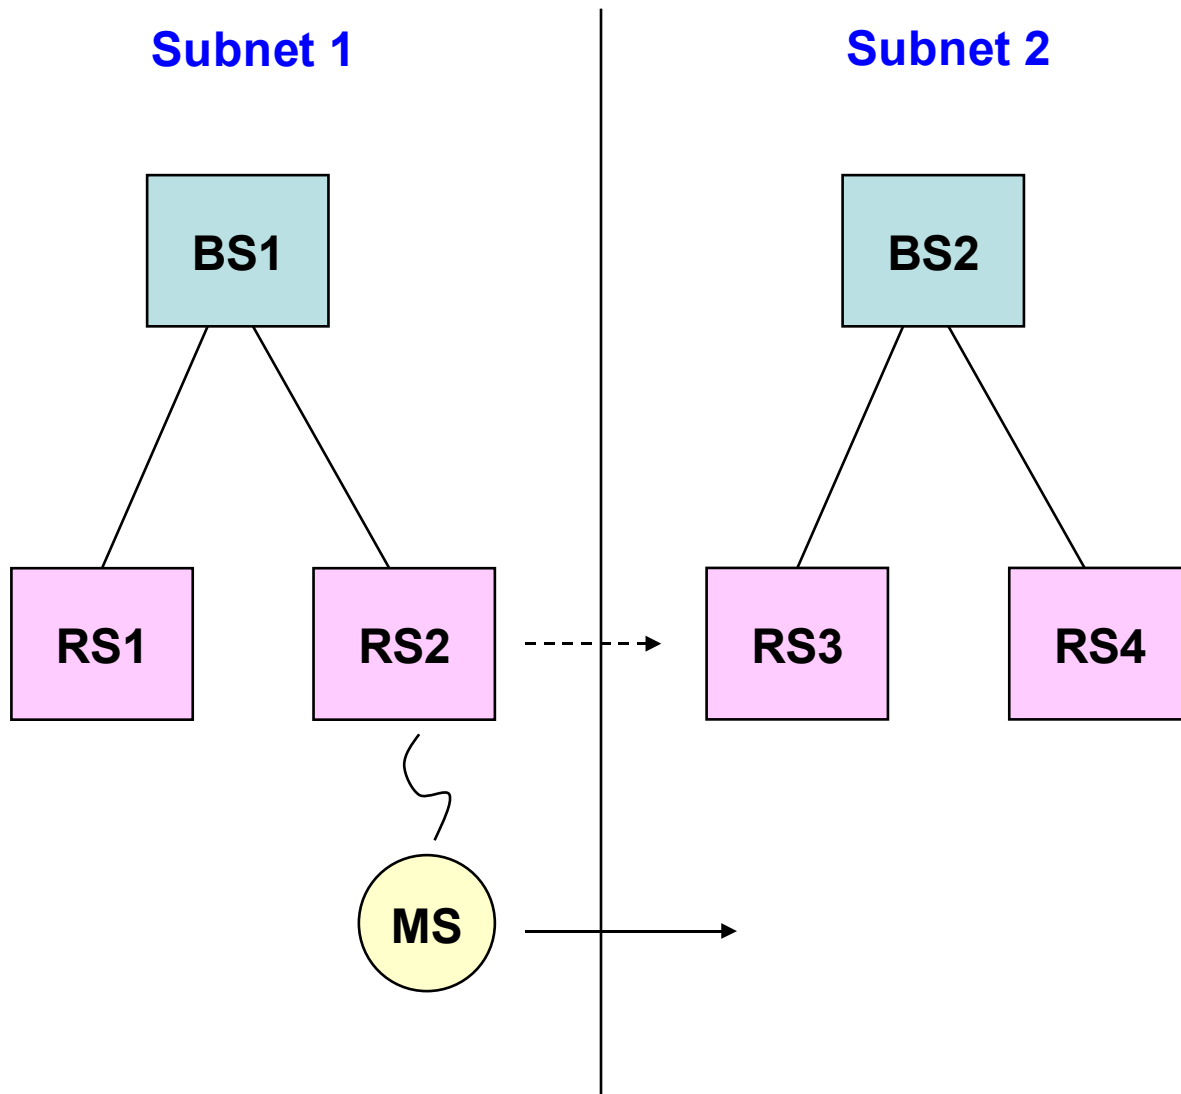

Release:

The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE's name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE's sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802.16.

IEEE 802.16 Patent Policy:

The contributor is familiar with the IEEE 802.16 Patent Policy and Procedures <<http://iee802.org/16/ipr/patents/policy.html>>, including the statement "IEEE standards may include the known use of patent(s), including patent applications, provided the IEEE receives assurance from the patent holder or applicant with respect to patents essential for compliance with both mandatory and optional portions of the standard." Early disclosure to the Working Group of patent information that might be relevant to the standard is essential to reduce the possibility for delays in the development process and increase the likelihood that the draft publication will be approved for publication. Please notify the Chair <<mailto:chair@wirelessman.org>> as early as possible, in written or electronic form, if patented technology (or technology under patent application) might be incorporated into a draft standard being developed within the IEEE 802.16 Working Group. The Chair will disclose this notification via the IEEE 802.16 web site <<http://iee802.org/16/ipr/patents/notices>>.

Problem Statements

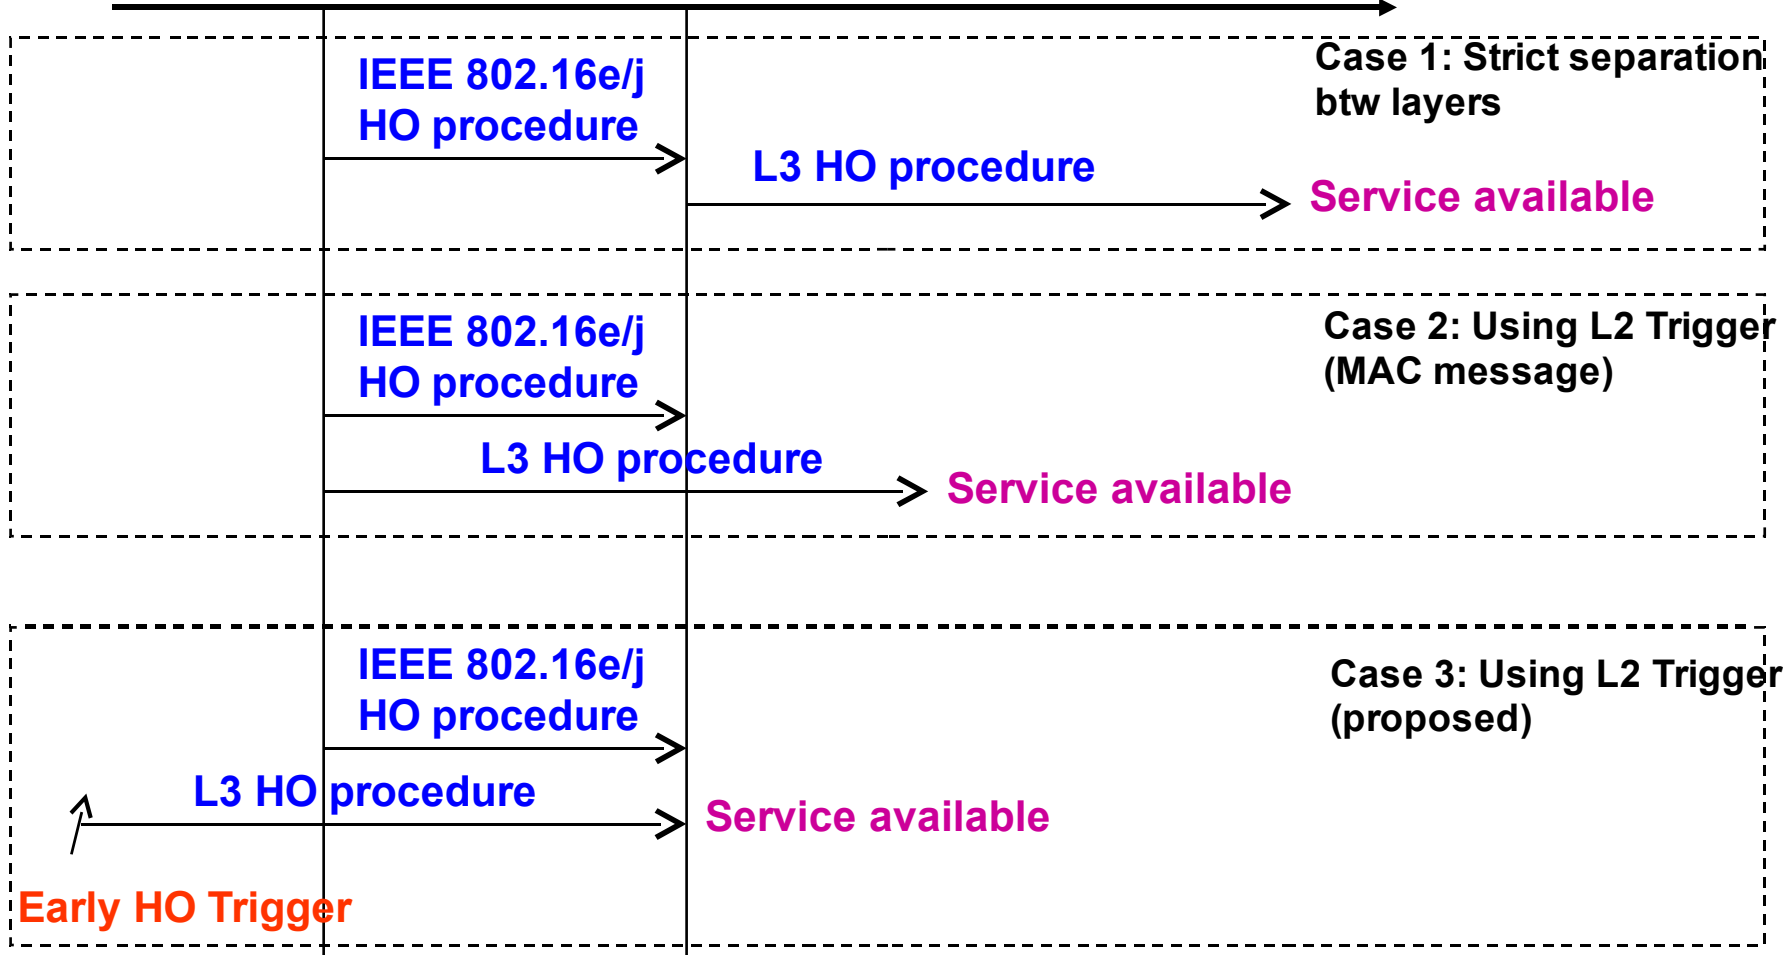

- With introducing RS
 - 7 HO cases can be considered [Intel]
 - Frequent HO
 - High HO latency
 - Multi-hop relay
 - Strict separation btw layers

HO Latency

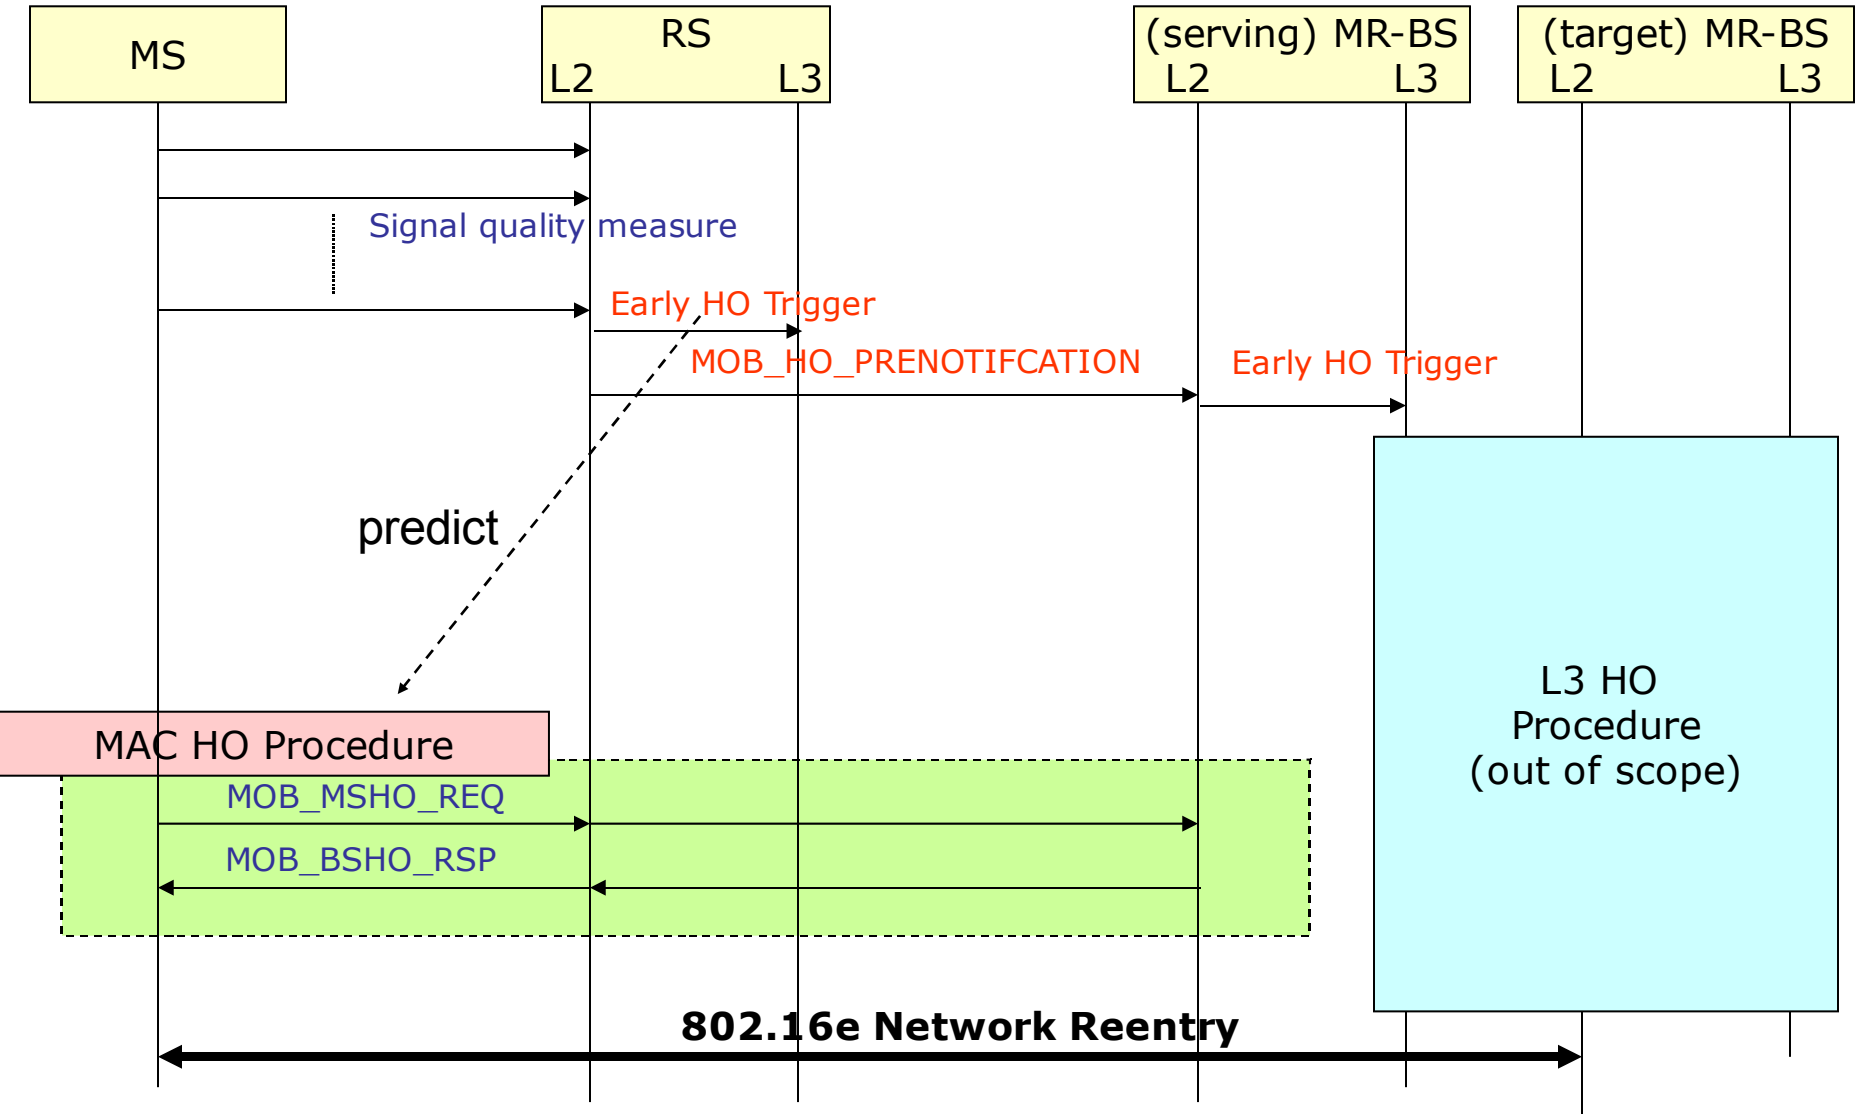

L2 HO Start

L2 HO End

Time

Proposed Message Flows

Summary

- Optional
- Key feature
 - To reduce total HO latency two things have been proposed:
 - Early HO Trigger event (local event inside RS)
 - MOB_HO-PRENOTIFICATION message (to inform MR-BS of early HO trigger occurring).
 - Trigger condition is out of scope.

Text Changes

- *[Insert new subclause 6.3.22.1.2.1]*
- **6.3.22.1.2.1 Handover Early Trigger**
- An early handover trigger, so called L2 trigger, is a signal of an L2 event and it is early notice of an upcoming change in the L2 point of attachment of the MS to the access network. An RS may generate early handover trigger event to accelerate corresponding L3 handover procedure so that total handover latency can be reduced. To support centralized MR network, early trigger event is transmitted to MR-BS by MOB_HO-PRENOTIFICATION message. Upon reception of the MOB_HO-PRENOTIFICATION message, the MR-BS shall start L3 handover procedure.
- *[Insert new subclause 6.3.2.3.xx]*
- **6.3.2.3.xx MOB_HO-PRENOTIFICATION message**
- The RS or MR-BS may transmit a MOB_HO-PRENOTIFICATION message when a handover is expected in the near future. This message may be generated prior to MOB_MSHO-REQ or MOB_BSHO-REQ message. The message shall be transmitted on the basic CID.
