Venue:

IEEE 802.16 Session #47, London, UK

Base Document:

None

Purpose:

To help develop the deployment scenarios for 802.16m

Notice:

This document has been prepared to assist IEEE 802.16. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.

Release:

The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE's name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE's sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802.16.

IEEE 802.16 Patent Policy:

The contributor is familiar with the IEEE 802.16 Patent Policy and Procedures <<http://ieee802.org/16/ipr/patents/policy.html>>, including the statement "IEEE standards may include the known use of patent(s), including patent applications, provided the IEEE receives assurance from the patent holder or applicant with respect to patents essential for compliance with both mandatory and optional portions of the standard." Early disclosure to the Working Group of patent information that might be relevant to the standard is essential to reduce the possibility for delays in the development process and increase the likelihood that the draft publication will be approved for publication. Please notify the Chair <<mailto:chair@wirelessman.org>> as early as possible, in written or electronic form, if patented technology (or technology under patent application) might be incorporated into a draft standard being developed within the IEEE 802.16 Working Group. The Chair will disclose this notification via the IEEE 802.16 web site <<http://ieee802.org/16/ipr/patents/notices>>.

Military Deployment Scenario for 802.16m

Outline

- Introduction
- Military Deployment Scenario for 802.16m
- Military Requirements for 802.16m
- Conclusion

Introduction

- The 802.16m is in the process of soliciting contributions in the area of deployment scenario, mobile channel models, and services to be provided
- This briefing presents a military deployment scenario for 802.16m
- The briefing also presents the military requirements

Military Usage Scenarios for 802.11s

- The 802.11s (Mesh Networking) has 5 usage scenarios*
 - Military scenario is one of them (See document 802.11-04/662r6)
- Each usage scenario presents its own unique requirements
- The scenarios and their requirements are intended to help develop the standards texts and provide a baseline for network simulations

Residential / Consumer Electronics

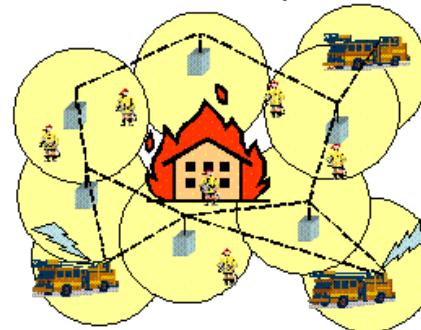

Campus/Community/Public Access

Military

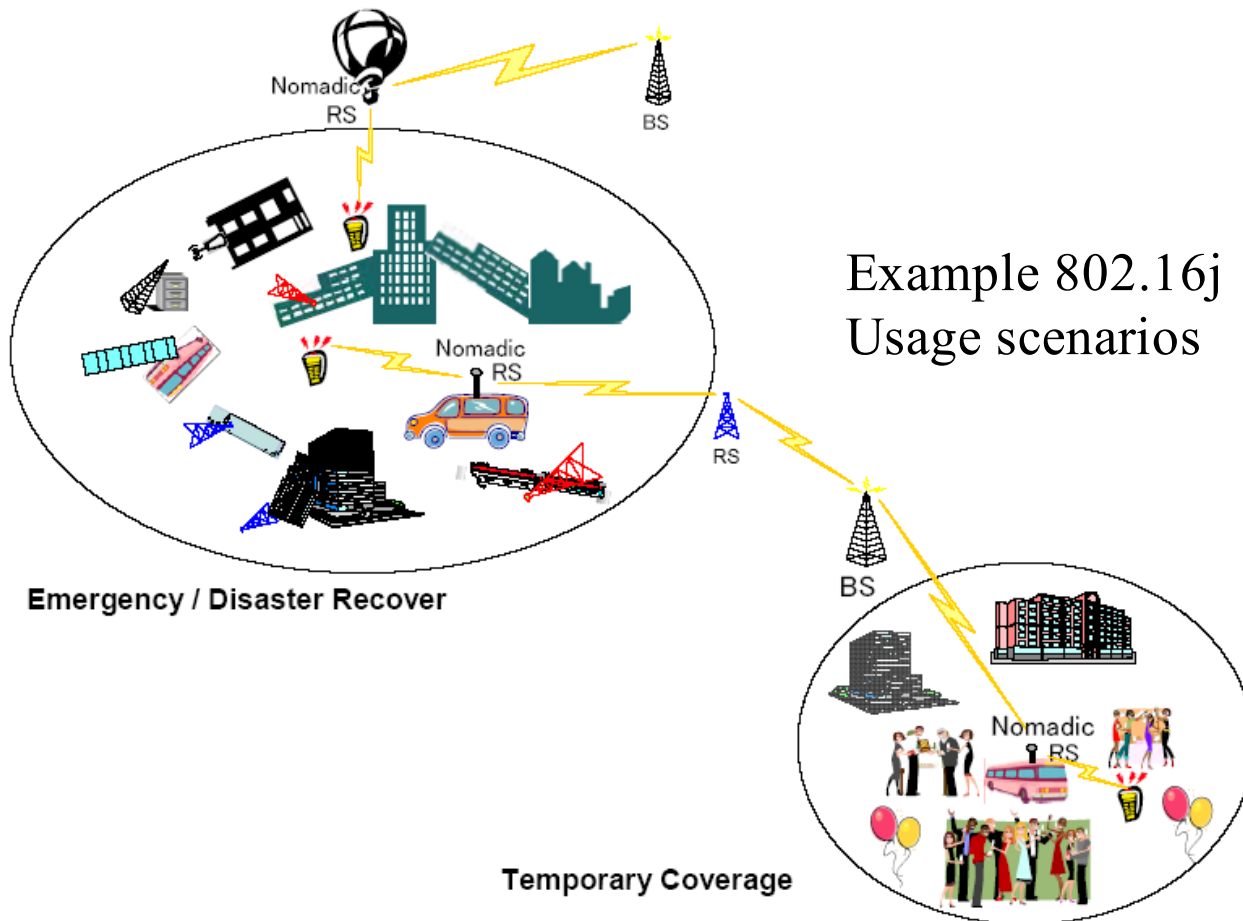

Public Safety

Military Usage Scenario in 802.16j

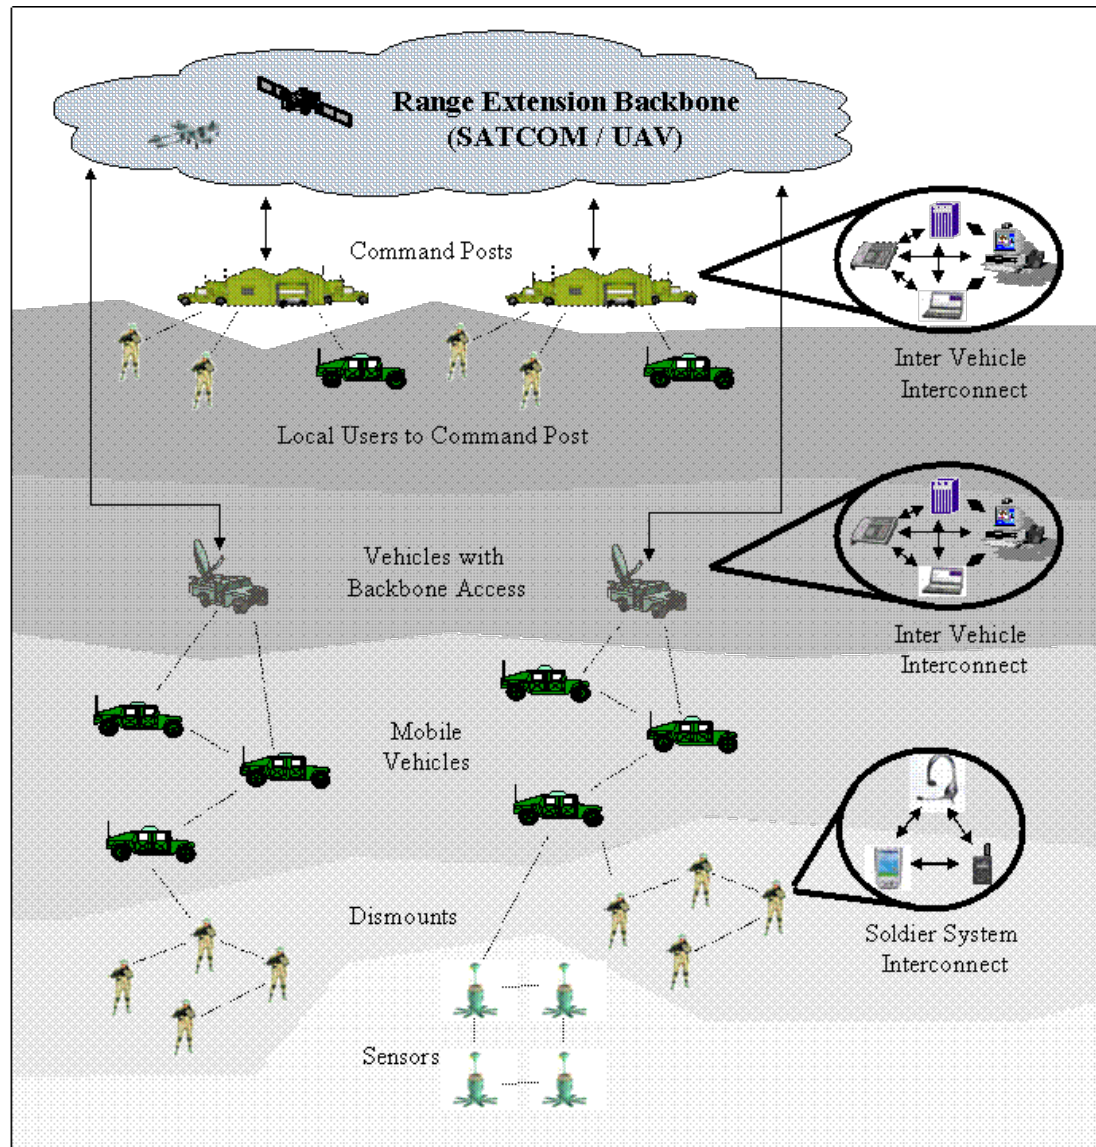

- The 802.16j (Multihop Relay) has 4 usage scenarios*
 - Military needs have been considered in those scenarios
 - See document 80216j-06_015

Why Consider a Military Deployment Scenario for 802.16m?

- Military has a strong buying power if the 802.16m products meet their requirements
 - Government would like to leverage commercial products as much as possible (with some military enhancements)
- Military helps advance the technological envelope
 - ARPANET Internet
 - MANET
 - 802.11s
 - 802.16j
 - Spread spectrum commercial CDMA
- Today's military requirements could become tomorrow's civilian requirements
 - Public safety and first responders

Military Deployment Scenario for 802.16m

Military Requirements for 802.16m

- Support multi-hop communications
 - The majority is 2 hops from the BS with a small number being 3 hops
- Support BS/relay mobility
- Support handover with relay
- Security/Survivability and QOS (for different applications)
- Support multicast traffic
- Compensate for variable radio link capacity
- Minimize battery power consumption
- Support the frequency bands within the current 802.16d/e/j framework that do not interfere with the other technologies that are part of IMT.
- Priority and preemption
- Simplify the design of multi-mode devices

Conclusion

- It is a win-win situation (for commercial and military) if the 802.16m adopts military deployment scenario
- Consider military requirements when developing the deployment scenario for 802.16m
