| Re: | Reporting activities of the Coexistence Correspondence Group since its establishment in July |
| Abstract | This contribution summarizes the issues discussed by the participants, including agreements and open issues. |
| Purpose | Informing 802.20 WG of the progress. |
| Notice | This document has been prepared to assist the IEEE 802.20 Working Group. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein. |
| Release | The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE’s name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE’s sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802 MBWA ECSG. |
Coexistence CG
Chair’s Report to the Singapore Meeting
IEEE 802.20 Meeting #4
Singapore, September 2003

Reza Arefi
reza.arefi@ieee.org
Coexistence CG

In July, 802.20 voted to create a “Coexistence CG” with the following charter.

Study and create a consensus recommendation on how to address issues related to the coexistence of future 802.20 systems with other wireless technologies deployed in the licensed bands below 3.5GHz.

The CG discussed the issues in two conference calls and some email activity.
Progress

- The majority of CG participants had agreement on the following issues:
  - Coexistence is an important issue and 802.20 needs to address it through performing coexistence analyses
  - In order to do so, 802.20 needs to form a Task Group focusing on the coexistence issues
  - 802.20 needs to produce a document on coexistence

- It was also generally agreed that 802.16.2 was a good model to follow
Open Issues

- Should “ability to coexist” with other technologies be an evaluation criterion?
  - The issues are timing and order of creating the coexistence document vis a vis evaluation criteria, requirements, and PHY/MAC documents since coexistence studies need to use parameters that are technology-dependent

- Should RF performance information (TX mask, RX filters, etc.) needed for the coexistence analyses be included in the PHY/MAC specifications?
  - Will the 802.20 coexistence document be a “Recommended Practice” as defined by 802?
  - Or should it be part of the Standard (PHY/MAC)?

- The level of detail in CG’s recommendation to 802.20
  - Could the recommendation include some focus areas (interference scenarios, primary bands, etc.)?
  - Or should this be left to the TG to decide?
The Plan

- The CG is scheduled to make its recommendation(s) to the WG by November meeting.

- Four more calls are scheduled:
  - Call #3: Oct. 10, 2003, 1:00-2:00 PM EDT
  - Call #4: Oct. 20, 2003, 1:00-2:00 PM EDT
  - Call #5: Oct. 31, 2003, 1:00-2:00 PM EDT
  - Call #6: Nov. 5, 2003, 1:00-2:00 PM EDT

- The call-in info will be distributed one week prior to each call through the reflector (stds-80220-coexistence@ieee.org)
