Summary recommendations for TWDP

- The present TWDP works, enables a successful standard, and the standard should go forward
  - OMA normalization
  - Independently-determined OMA and bias
  - Long length EQ
  - Limit based on Gaussian result

- Improvements are being considered, but *unless and until* we have something demonstrably better, we should not make a change
  - If improvements are developed in a timely manner, and are agreed to be better by the majority of the committee, then and only then should a change be made
