From: IEEE 802.3 Ethernet Working Groupⁱ
Subject: Liaison letter to TIA Subcommittee TR-42.11 regarding harmonization of single-mode connection Return Loss
Date: July 18, 2013
Approval: Agreed to at 802.3 Plenary meeting, Geneva, Switzerland, 18 July 2013

Dear Mr. Kolesar and members of the TR-42.11 subcommittee,

The IEEE 802.3 Ethernet Working Group is working on next generation and higher speed Ethernet projects such as 400 Gigabit Ethernet. A consistent challenge the Working Group is seeing is the need to develop solutions that align with the industry goals of lower power and lower cost implementations. This is especially true, but not limited to, data center applications. Minimizing the implementation complexity that is necessary to overcome channel impairments is a key approach to achieving these goals of reduced power and cost application solutions.

The IEEE 802.3 400 Gb/s Ethernet Study Group met the week of July 15 at the IEEE 802 Plenary. It was highlighted in the following contribution: http://www.ieee802.org/3/400GSG/public/13_07/bhatt_400_01a_0713.pdf that an inconsistency exists between TIA and ISO/IEC with regards to return loss specifications for single-mode connections. This inconsistency could increase implementation complexity for some of these next generation Ethernet solutions.

The IEEE 802.3 Ethernet Working Group requests that, to accommodate cabling infrastructure performance requirements that may be required by future Ethernet solutions, the TR-42.11 subcommittee harmonize with the ISO/IEC 11801 Return Loss specification for single-mode connections to 35 dB, as part of the revision to TIA-568-D. The Return Loss value of 35 dB represents a balanced choice when taking into account factors like performance improvement, harmonization of global specifications, and state of the art of technology today.

We would appreciate any feedback that TR-42.11 Subcommittee may have regarding this request and look forward to any future collaboration.

Sincerely,

David Law
Chair, IEEE 802.3 Ethernet Working Group
