

notes by Dave Dwelley

meeting opened 8am Friday 1/16/15 by Dave Dwelley

meeting closed 8:45 - gave room to Kousi

consolidate to simplify transitions, including simple transition names - to restore meaningful names when task is done

break into 6 top states (from oPSE variable)

- stop here and review on reflector - by Feb 8

- point out that we are aligned with the MIB variables (aPSEP...D...Status)

is this enough or do we need more high level states? tentatively no

break "searching" state into detect, class, 4PID states

what else needs to go here?

add new BT arcs

test the new machine against the old machine!

move original state machine into an annex at the back for reference
