

Wake-up and sleep timing measurements on the FOT Rx over temperature from -40 to 85deg

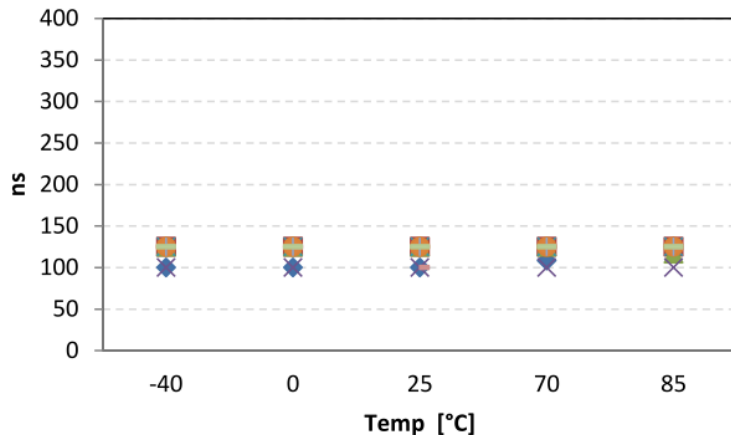

Sample size: 9 samples consisting of 3 x 3 different lots

Modulation: NRZ modulation (PAM0-PAM15) at 125 Mbit/s

Triggering: Rx disable threshold voltage

Time detection: From disable-threshold-voltage until either "zero" or "full" amplitude

Shutdown Time to Powersaving

Startup Time from Powersaving
