

# **TIA FO-2.2.1**

## **May 23, 2000 Update**

---

Michael J. Hackert

Chair, TIA FO-2.2.1

Task Group on Modal Dependence of Bandwidth

[HACKERTMJ@CORNING.COM](mailto:HACKERTMJ@CORNING.COM)

# 62.5 mm Multimode Fiber Development Completed

---

- ◆ **Methodology demonstrated which allows risk assessment**
  - **Enhanced performance demonstrated by combination of**
    - **RML bandwidth (per FOTP 204 - 23.5 mm launch) and**
    - **Encircled flux (per FOTP 203)**
- ◆ **Validation experiment risk assessment determined to be negligible**
  - **Results presented at 5/11/00 meeting**

# Validation Experiment Conclusion

---

- ◆ **Enhanced performance can be achieved**
  - **1 Gigabit Ethernet operation**
  - **62.5 mm fiber**
  - **500 m**
- ◆ **Through a combination of**
  - **Transmitters which have encircled flux**
    - **³75% within 30 mm diameter and**
    - **£25% within 9 mm diameter and**
  - **Fiber which has RML bandwidth <sup>³</sup>385 MHz-km**
- ◆ **Producing EMB <sup>³</sup>385 MHz-km**

## 62.5 mm Multimode Fiber Wrap up

---

- ◆ **Documentation of recommendation begun**
  - **TIA TSB author identified (John Schlager - NIST) and draft begun**
  - **FOTPs in final stages of balloting**
  
- ◆ **TIA FO-2.2.1 now focused on 50 mm development**
  - **62.5 mm development effectively completed**

# Next Generation 50 mm Multimode Fiber Development Progressing on Schedule

---

- ◆ **Activity on track to deliver a recommendation consistent with IEEE 802.3ae timing**
  - **Fiber performance measurement (11/00)**
  - **Transceiver launch requirement (11/00)**
  - **Document enhanced system performance recommendation (5/01)**

# Next Generation 50 mm Multimode Fiber Development Status

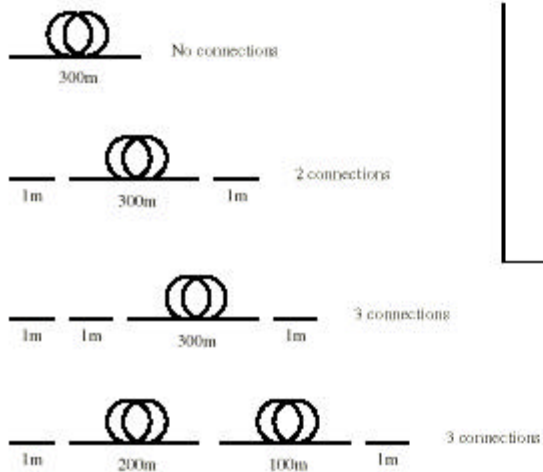

---

- ◆ **Draft proposal under consideration**
  - **Fiber characterization to control maximum allowable DMD range**
  - **Source launch requirement to minimize launch spot size**
- ◆ **Modeling demonstrates “sweet spot”**
  - **Includes impact of connector offset**
- ◆ **System test plan under development**

# 50 mm Multimode Modeling Connection Configuration

---

- Mean connection loss chosen to be 0.3dB (std dev 0.2dB) =  $4.8\mu\text{m}$  mean offset (std dev  $1.9\mu\text{m}$ )
- Buckler model relates empirical loss to offset for  $50\mu\text{m}$  fiber

Modeling results courtesy Steve Golowich, et. al., Lucent

# 50 mm Multimode Modeling

- ◆ Blue region shows “sweet spot”
- ◆ Large number of permutations evaluated

Modeling results courtesy Steve Golowich, et. al., Lucent

# TIA FO-2.2.1 Summary

---

- ◆ **62.5 mm**
  - **Recommendation complete and final documentation in progress**
- ◆ **50 mm**
  - **Proposal drafted**
  - **Powerful modeling tool available to direct development and validation**
  - **Development on schedule**
