IEEE-SA Standards Board Bylaws on Patents in Standards

6. Patents

IEEE standards may include the known use of essential patents and patent applications provided the IEEE receives assurance from the patent holder or applicant with respect to patents whose infringement is, or in the case of patent applications, potential future infringement the applicant asserts will be, unavoidable in a compliant implementation of either mandatory or optional portions of the standard [essential patents]. This assurance shall be provided without coercion and prior to approval of the standard (or reaffirmation when a patent or patent application becomes known after initial approval of the standard). This assurance shall be a letter that is in the form of either:

- a) A general disclaimer to the effect that the patentee will not enforce any of its present or future patent(s) whose use would be required to implement either mandatory or optional portions of the proposed IEEE standard against any person or entity complying with the standard; or
- b) A statement that a license for such implementation will be made available without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination.

This assurance shall apply, at a minimum, from the date of the standard's approval to the date of the standard's withdrawal and is irrevocable during that period.

Approved by IEEE-SA Standards Board – March 2003 (Revised December 2004)

Inappropriate Topics for IEEE WG Meetings

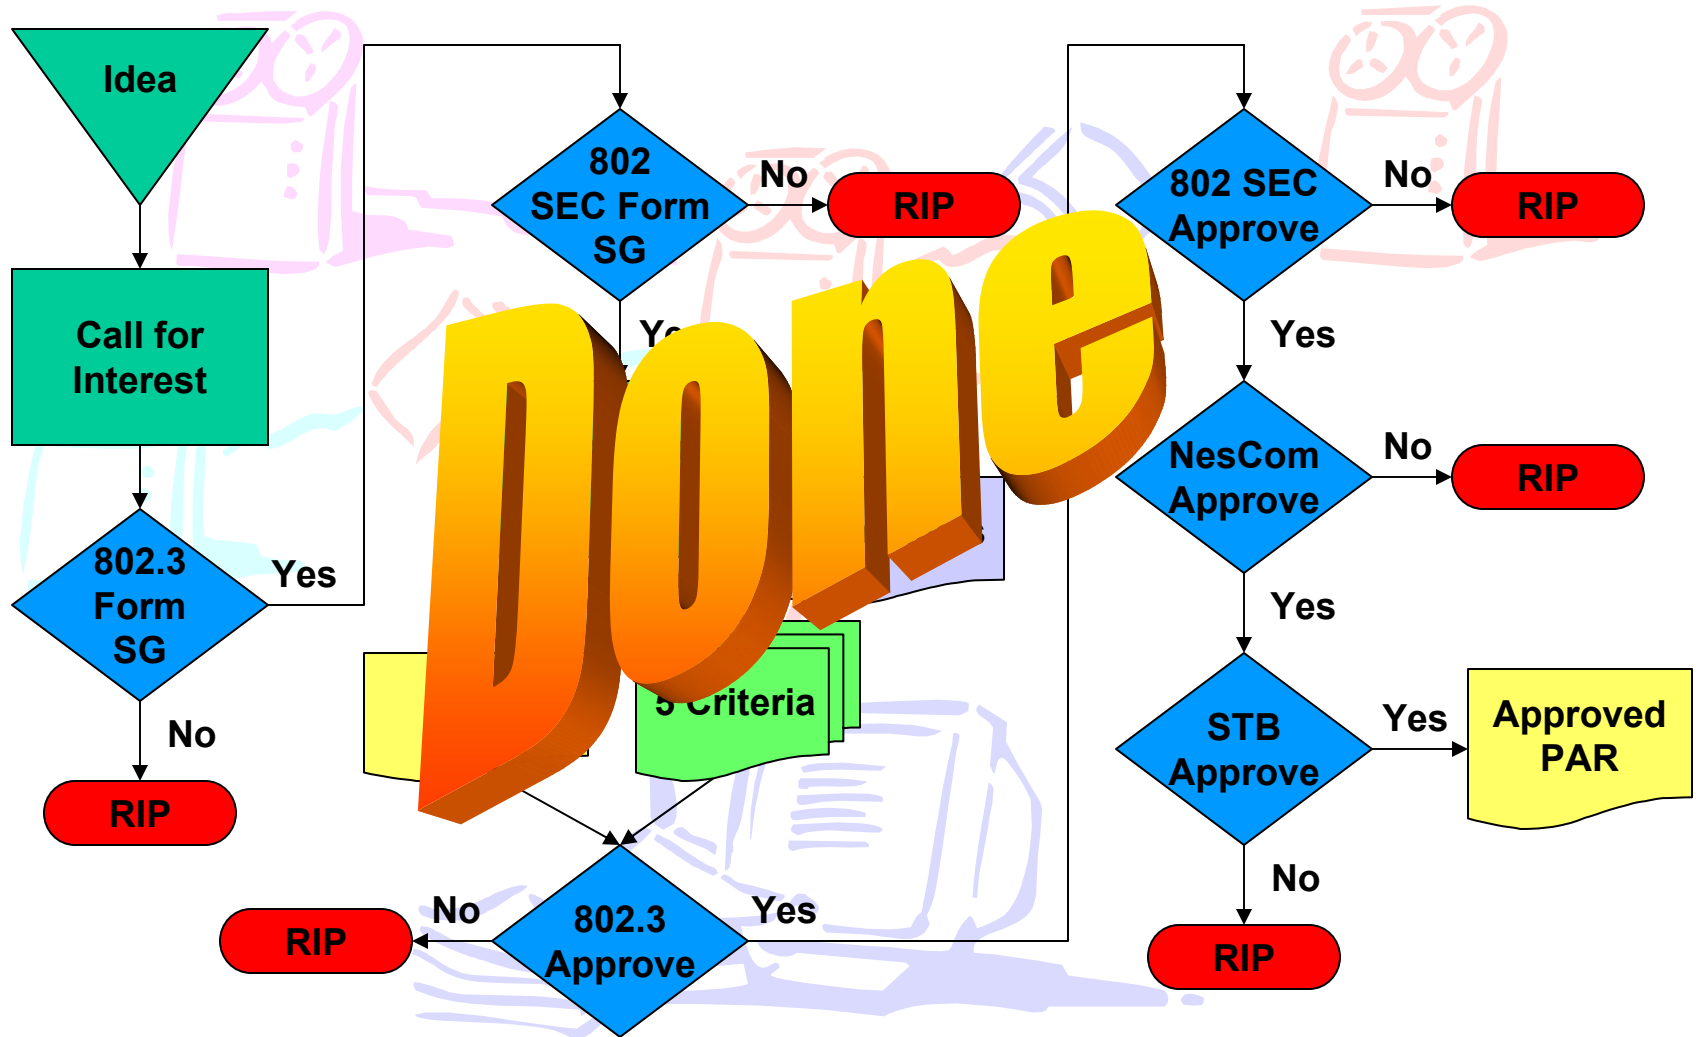

- Don't discuss licensing terms or conditions
- Don't discuss product pricing, territorial restrictions, or market share
- Don't discuss ongoing litigation or threatened litigation
- Don't be silent if inappropriate topics are discussed... do formally object.

If you have questions, contact the IEEE-SA Standards Board Patent Committee Administrator at patcom@ieee.org or visit <http://standards.ieee.org/board/pat/index.html>

P802.3an Objectives

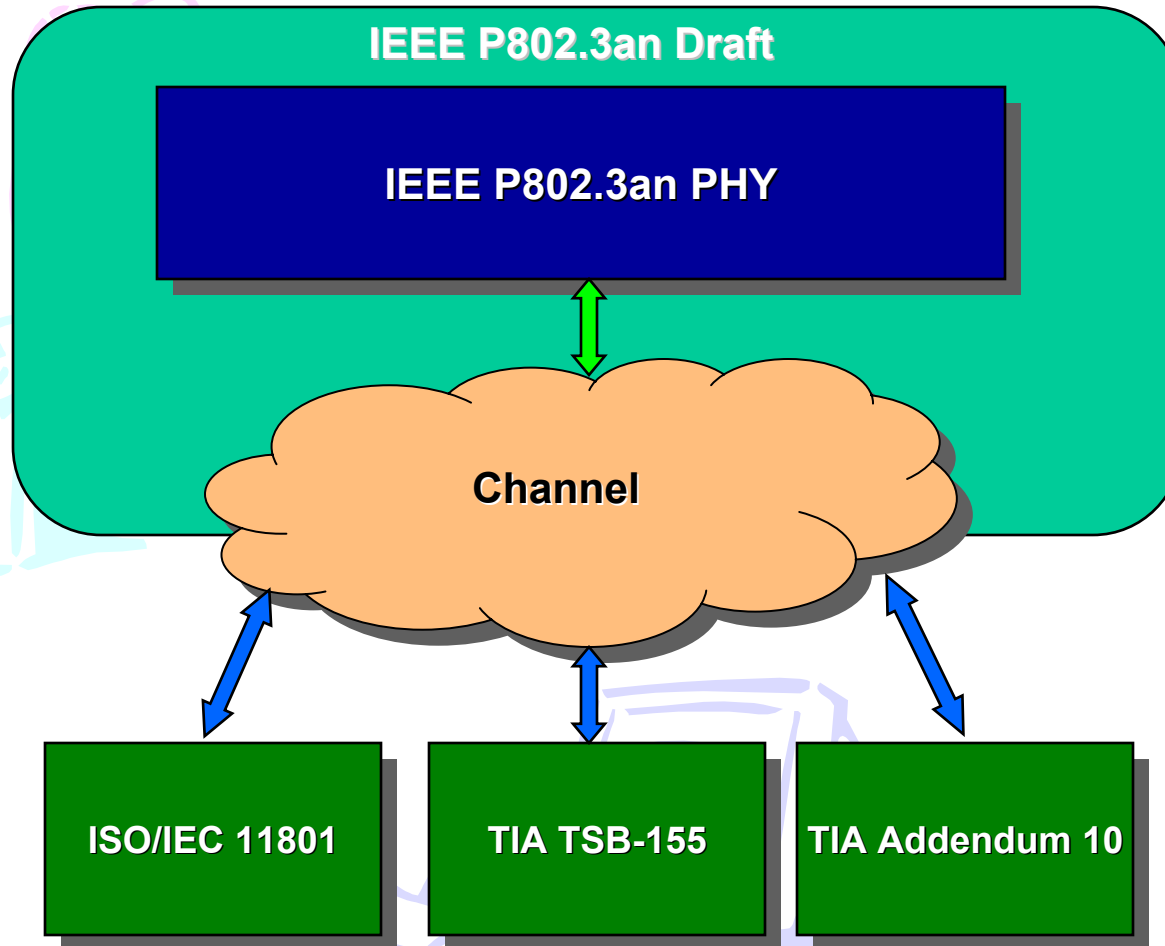

- **Preserve the 802.3/Ethernet frame format at the MAC Client service interface**
- **Preserve min. and max. frame size of current 802.3 Std.**
- **Support full duplex operation only**
- **Support star-wired local area networks using point-to-point links and structured cabling topologies**
- **Support a speed of 10.000 Gb/s at the MAC/PLS service interface**
- **Select copper media from ISO/IEC 11801:2002, with any appropriate augmentation to be developed through work of 802.3 in conjunction with SC25/WG3**
- **Support Clause 28 auto-negotiation**
- **Support coexistence with 802.3af**
- **To not support 802.3ah (EFM) OAM unidirectional operation**

Motions

Channel Diagnostics Motion

- **Motion: Direct the editors to create Optional Channel Diagnostic registers to the PMA/PMD MMD:**
 - **A) To report the “SNR Operating Margin” measured at the slicer on a per channel basis. Two sets of registers will be created to report:**
 - 1) SNR Operating Margin during normal operation
 - 2) Latched value for the lowest value observed since last read.
 - **Values for both sets of these registers will be reported with .1dB resolution to an accuracy of .5dB, range of -12.7 to 12.7dB**
 - **B) Additional register space will be reserved for vendor specific use.**

Channel Diagnostics Motion #2

- **Motion:** Direct the editors to create Optional Channel Diagnostic registers to the PMA/PMD MMD:
 - A) To report the “SNR Operating Margin” measured at the slicer on a per channel basis. Two sets of registers will be created to report:
 - 3) Receive signal power at the MDI during training
 - Values for both sets of these registers will be reported with .1dB resolution to an accuracy of .5dB, range of TBD to 5.2 dBm.
