

# Comment on 55.7.3.2

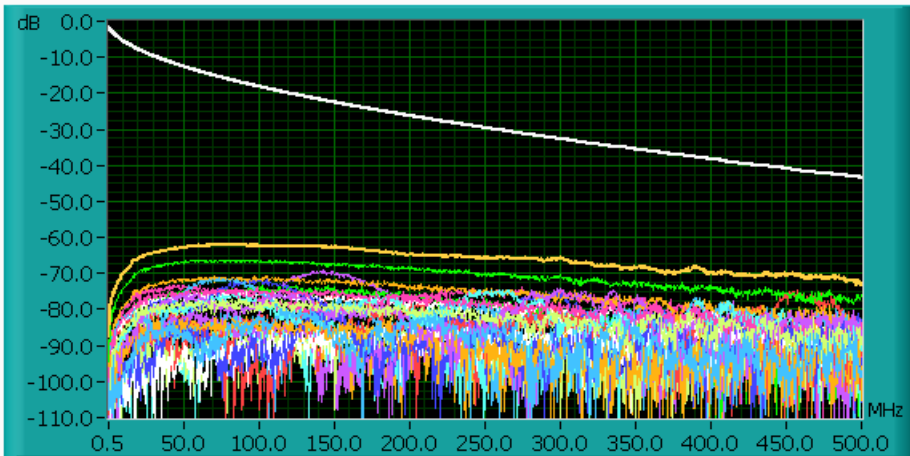

**Richard Mei**  
**SYSTIMAX® Solutions**  
**May 18, 2005**

- **PSAFEXT is close to 70dB at high frequency for 100m 6x1 channels**
- **This level is low and can be ignored**

Pair-1 IL & PSAFEXT (Closet End)

Pair-2 IL & PSAFEXT (Closet End)

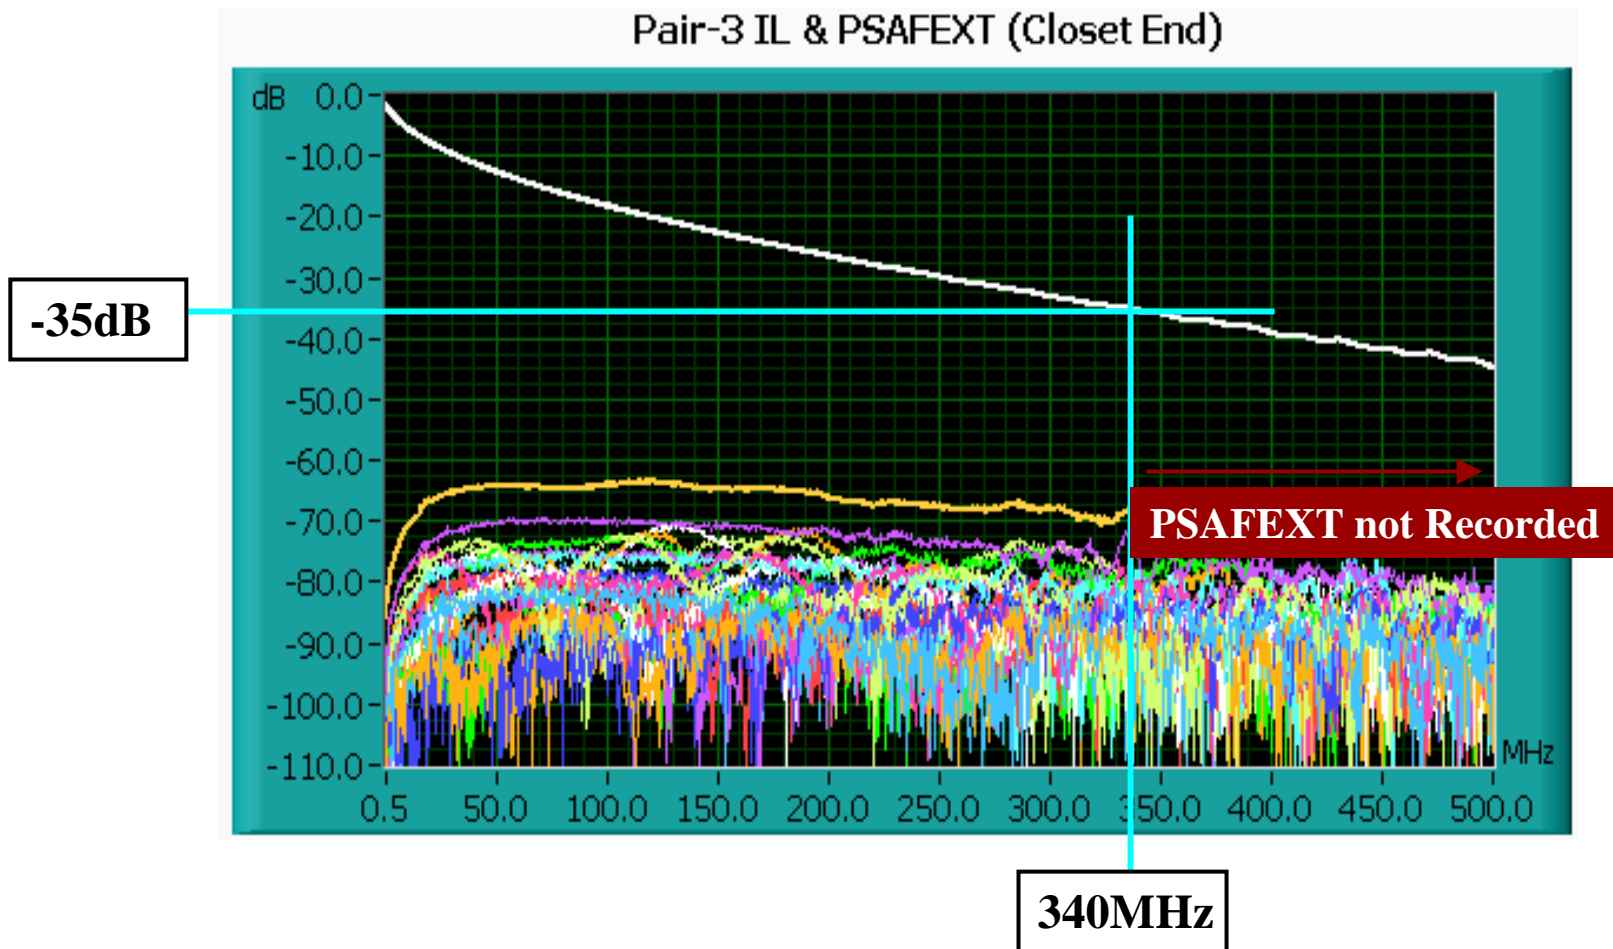

Pair-3 IL & PSAFEXT (Closet End)

Pair-4 IL & PSAFEXT (Closet End)

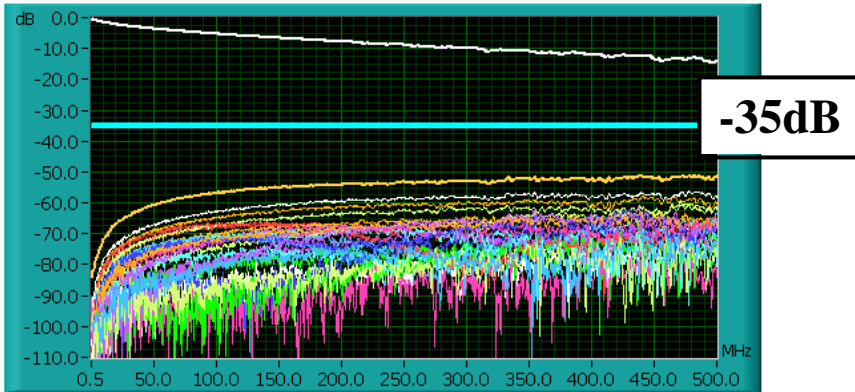

- Propose to implement an IL cap at  $-35\text{dB}$
- PSAFEXT will not be recorded beyond the corresponding frequency

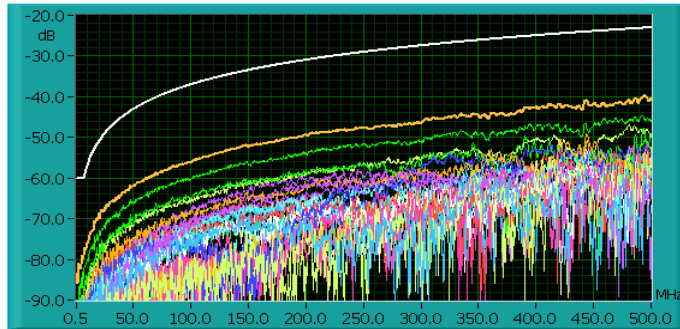

- **No impact on PSAELFEXT calculation for short 6x1 channels**

Pair-4 IL & PSAELFEXT (Closet End)

Pair-1 PSAELFEXT (Closet End)

Pair-3 PSAELFEXT (Closet End)

Minimum Margin (dB)

Pair 1	16.64
Pair 2	11.08
Pair 3	13.22
Pair 4	13.01

Pair-2 PSAELFEXT (Closet End)

Pair-4 PSAELFEXT (Closet End)

# Conclusion:

- Avoid noise floor issue
- Simplify the calculation

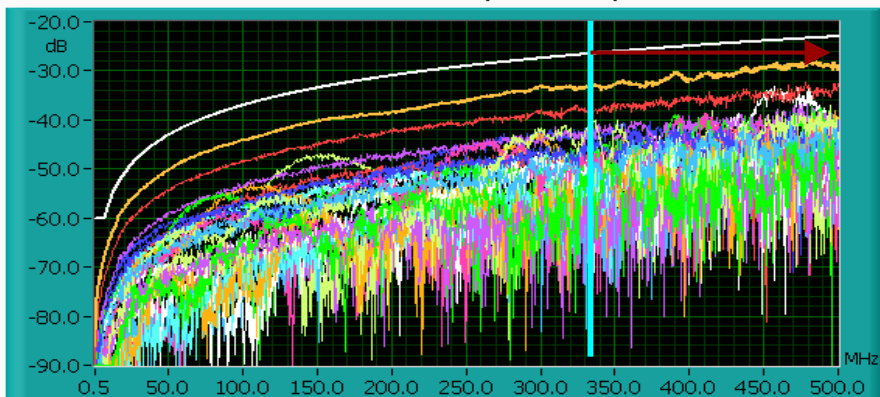

Pair-1 PSAELFEXT (Closet End)

Pair-3 PSAELFEXT (Closet End)

Pair-2 PSAELFEXT (Closet End)

Pair-4 PSAELFEXT (Closet End)
