Editors note <clause>-2 style inconsistent.

SuggestedRemedy

Use Style from c75.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT.

Cl **00** *SC* **0** *P* *L* # 202424

DIAB, WAEL BROADCOM

Comment Type **TR** *Comment Status* **R** *) BE PROCESSED], , GDMO*

The GDMO definitions sectionon is missing. I would request that we complete this prior to completing WG Ballot and launching SA Ballot

SuggestedRemedy

Include Annex 30A and 30B

Response *Response Status* **U**

REJECT.
According to Motion #4 from November 2007 802.3 WG meeting, GDMO should be defined by a separate project after Clause 30 is completed. Please refer http://www.ieee802.org/3/minutes/nov07/minutes_1107.pdf.

Cl **00** *SC* **0** *P* *L* # 2429

Anslow, Pete Nortel Networks

Comment Type **E** *Comment Status* **D**

Throughout this draft there are places where the readibility can be improved by small editorial modifications that do not change the meaning. The attached PDF file contains suggested changes indicated using the "Text Edits" tool. Because the editing marks can be difficult to locate, each one has the associated line number marked with yellow highlighter. Only pages with proposed edits are included.
attached file is 3av_1109_anslow_1.pdf

SuggestedRemedy

Apply these suggested changes.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT.

Cl **00** *SC* **0** *P* *L* # 202420

DIAB, WAEL BROADCOM

Comment Type **TR** *Comment Status* **R** *[TO BE PROCESSED]*

The nomenclature used for the Gigabit technologies is inconsistant with EFM and 802.3.

SuggestedRemedy

Please change all references of 1GBASE to 1000BASE including in the 10/1GBASE so it is 10G/1000BASE

Response *Response Status* **U**

REJECT.
The nomenclature for all new PHYs was approved by the TF and presented to the 802.3 working group without significant opposition.
This is a new PMD name and does not need to use same units as 1000BASE PMDs.
10/1GBASE provides most concise name for the PMD capabilities.

Vote:
Approve this Response
For: 28
Against: 0
Abstain: 0

Added at November 2008 meeting:
The TF believes that it is important to have the same units to describe the speed in both directions.

Cl **00** *SC* **0** *P* *L* # 2546

Remein, Duane Alcatel-Lucent

Comment Type **ER** *Comment Status* **D**

Per IEEE 2007 Style Manual Section 11.1 1st paragraph pg 19 .
"... Hanging paragraphs (i.e., paragraphs following a main clause head or main subhead) should not be used since reference to the text would be ambiguous. It may be necessary to include a subhead with the title "General" to avoid instances of hanging paragraphs, as shown in Figure 2."
Our draft violates this in c76, 75A, 75B and 75C.

SuggestedRemedy

Add "General" or "Overview" section to each of the following clauses:
c76, c75A, 75B and 75C

Proposed Response *Response Status* **W**

PROPOSED ACCEPT.

Cl **00** *SC* **0** *P* **00** *L* **0** # 2460

Hajduczenia, Marek ZTE Corporation

Comment Type **ER** *Comment Status* **D**

The draft includes a number of subclause titles which were neither change nor include any changed text e.g. 1.2, 1.1 in Clause 1, 45.1, 45.2 in Clause 45 etc. Since there is no point to have them, I suggest to have the draft scrubbed against such superfluous subclauses and strike them out. DO NOT strike out subclause titles which contain modifitions e.g. 1.3, 1.4 or 1.5 in Clause 1.

SuggestedRemedy

See the suggested remedy above.

Replace "802.3-2005" with "802.3-2008"

Cl **00** *SC* **0** *P* **00** *L* **0** # 2466

Hajduczenia, Marek ZTE Corporation

Comment Type **ER** *Comment Status* **D**

This is a generic comment against the draft. There are several locations (e.g. page 266 line 25, page 267 line 5 etc. in the markup file), where there is a line break between the word Table and table number. This sometimes complicates the readability of the text.

SuggestedRemedy

Update the style of the Table and Figure cross references to include a non-breakable space between the keyword (Table/Figure) and the table/figure number. Changes to the template can be provided upon request.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT.

Cl **00** *SC* **0** *P* **1** *L* **1** # 2544

Remein, Duane Alcatel-Lucent

Comment Type **ER** *Comment Status* **D**

The use of synonymous terms;
1 Gb/s and 1G-EPON,
1/10 Gb/s and 10/1G-EPON and asymmetric-rate,
10/10 Gb/s and 10/10G-EPON and symmetric-rate,
detracts from the readability of the document.

SuggestedRemedy

Exclusively use the agreed naming conventions recommended in the resolution of comment #1981 from Seoul 2008 meeting; 1G-EPON, 10/1G-EPON and 10/10G-EPON.

Proposed Response *Response Status* **W**

Cl **00** *SC* **31.2** *P* **417** *L* **25** # 2709

Dawe, Piers Avago Technologies

Comment Type **TR** *Comment Status* **R** *SED] - delayed until Annex31*

31.2 says 'MAC Control clients may include the Bridge Relay Entity, LLC, or other applications.' If there is a purpose to the proposed Annex 31 'organization specific' transmission channel, someone must have another client in mind. Refer to unsatisfied TRs.

SuggestedRemedy

State what the new MAC Control client is. Is it an OMCI? Give a reference to the appropriate ITU-T document(s).

Response *Response Status* **W**

REJECT.
OMCI fits perfectly into the category of "other applications". No changes to the draft are believed to be needed.
[was c31, move to c00 as c31 is not in the draft]
[page number is against 802.3ay D2.3]

Cl **00** *SC* **31.7** *P* **424** *L* **52** # 2706

Dawe, Piers Avago Technologies

Comment Type **T** *Comment Status* **R** *[TO BE PROCESSED]*

31.7 says 'Since implementation of the MAC Control sublayer is optional, a MAC Control client cannot assume the existence of a MAC Control sublayer entity in a peer DTE.' 64.1 says 'The Multipoint MAC Control functionality shall be implemented for subscriber access devices containing point-to-multipoint Physical Layer devices defined in Clause 60.' 77.1 says 'The Multipoint MAC Control functionality shall be implemented for subscriber access devices containing point-to-multipoint Physical Layer devices defined in Clause 75.' These statements are contradictory. Do not know what a 'subscriber access device' is exactly, and do not see how a non-subscriber access PON device (an OLT perhaps?) could avoid MPCP, unless there were just one ONU.

SuggestedRemedy

Change sentence in 31.7 to 'For certain PHY types [or port types, or Physical Layer types], certain MAC Control functions are required (see Clause 64 and Clause 77). Apart from this, implementation of the MAC Control sublayer is optional, and a MAC Control client cannot assume the existence of a MAC Control sublayer entity in a peer DTE.'
Change 'subscriber access devices' to 'PHY types' [or port types, or Physical Layer types].

Response *Response Status* **C**

REJECT.
Clause 31 is not open for commenting.
MAC Control client does not make this make this assumption but if it succeeds at the registration, then it knows that a DTE has a MAC Control sublayer.

Kramer, Glen Teknovus, Inc.

Comment Type **T** *Comment Status* **A** *[TO BE PROCESSED]*

Instead of being added to list of abbreviations, the following items should be added to list of definitions:
10G/10G-EPON,
10G/1G-EPON,
10G-EPON,
1G-EPON

SuggestedRemedy

Add to definitions and expand the description to show which rates are used in which direction

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Add the following definitions to section 1.4:

10G/10G-EPON - An EPON architecture operating at 10 Gb/s data rate in both downstream and upstream directions (symmetric rate).

10G/1G-EPON - An EPON architecture operating at 10 Gb/s data rate in downstream direction and at 1 Gb/s data rate in upstream direction (asymmetric rate).

10G-EPON - An EPON architecture operating at 10 Gb/s data rate in either one or both directions. This term collectively refers to 10G/10G-EPON and 10G/1G-EPON architectures (see definitions above).

1G-EPON - An EPON architecture operating at 1 Gb/s data rate in both downstream and upstream directions.

Remove existing abbrev. From section 1.5 (10G/10G-EPON, 10G/1G-EPON, 10G-EPON and 1G-EPON).

It's impossible to tell from the color and underlining what is actually being modified in the base standard unless the plain version of the draft is read side by side the marked up version. Since we aren't supposed to comment on that version, it makes it rather difficult to properly review this text.

SuggestedRemedy

Come up with an alternative editing scheme so that it is clear, in the draft we are commenting against, what changes are needed to the base document.

Response *Response Status* **C**

REJECT.
Editors are more than willing to accept suggestions but keep in mind that as the amount of manual intervention increase the likelyhood of an error increases. Therefore any suggestion must require minimal manual intervention on the part of the Editors.
Note: Editors should not be overburdened with correcting problems caused by the tool.

Comment Type **T** *Comment Status* **D**

In clauses 30.3.7.1.2 through 30.3.7.1.8 the definitions come from clause 65 or clause 76 depending on the EPON type. The wording used for this choice is "65.1.3.x.x and 76.1.6.1.x.x, where appropriate"
Since this is a choice, it would be better worded as "65.1.3.x.x or 76.1.6.1.x.x, as appropriate"

SuggestedRemedy

change "65.1.3.x.x and 76.1.6.1.x.x, where appropriate"
to "65.1.3.x.x or 76.1.6.1.x.x, as appropriate" in 15 places

Dawe, Piers Avago

Comment Type **TR** *Comment Status* **R** *[TO BE PROCESSED]*

31.1 Overview says "Non-realtime, or quasistatic control (e.g., configuration of MAC operational parameters) is provided by Layer Management." The new 31A and 31C appears to be an attempt to overturn that, and not restricted to PON.

SuggestedRemedy

Needs proper debate in 802.3. If we agree that we want to do go ahead, the sentence quoted would need changing.

Response *Response Status* **U**

REJECT.
[Subclause number was fixed]
[Page number was fixed]
Annex 31A and 31C are not an attempt to overturn that "Non-realtime, or quasistatic control". It will be used for real-time control.
This mechanism was added by directive of the 802.3 WG - please see motion number #3 in minutes_0708.pdf.

Cl **31C** *SC* **31.5.3.4** *P* **32** *L* **32** # 2699

Dawe, Piers Avago Technologies

Comment Type **T** *Comment Status* **A** *[TO BE PROCESSED]*

31C.3 page 32 line 32 says 'The functions specified in this subclause ... define the function called by the INITIATE MAC CONTROL FUNCTION state of Figure 31-4 (See 31.5.3).'
Figure 31-4 INITIATE MAC CONTROL FUNCTION says 'Perform opcode-specific operation, See note.'
NOTE says 'The opcode-specific operation (per Annex 31A and Annex 31B, and Clause 64)'
If 31C has any purpose, one could extend the note to include Annex 31C. Also, the note appears to be a necessary part of the definition of MAC Control, and should be normative, not an informative NOTE. Further, putting long NOTEs inside figures is bad.

SuggestedRemedy

Move the NOTE to regular text, mention Annex 31C in it.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
[changed page, line and subclause numbers ; was c31, move to c31C as c31 is not in the draft]
[page number is against 802.3ay D2.3, page 424, line 20]

Clause 31 was defined in such a way that it would not require any changes when new opcode-specific functions are added. Opcode-specific functions are summarized in Annex 31A for ease of reference. Adding references to clauses containing opcode-specific functions to Clause 31 is a bad idea, as this clause will need to be opened for every new opcode-specific function.

Since Clause 31 is currently not open for our project, a maintenance request will be submitted to remove references to clauses containing opcode-specific functions from Clause 31.

Cl **31C** *SC* **31C.1** *P* **31** *L* **21** # 2708

Dawe, Piers Avago Technologies

Comment Type **TR** *Comment Status* **A** *[TO BE PROCESSED]*

Text says 'The extension operation is used to provide a standardized means for organizations to define their own MAC Control protocols outside the scope of this standard.'
This is far wider than the ITU-T liaison letter asked for. D2.0 comment 1923 and others apply.

SuggestedRemedy

Find out/decide what the EXTENSION communication subsystem is for, and write it down. Is it to allow _remote_ management (of what? the whole port? of the whole DTE?), using OMCI? some other ITU-T thing? Phone company proprietary protocol(s)?
Change to 'The extension operation is used to provide a standardized means for other standards development organizations, in particular ITU-T, to define their own MAC Control protocols outside the scope of this standard. The first application of this is to enable PLOAM messages related to protection switching, low-level performance monitoring, and management channel set-up (see ITU-T G.G.984 and G.983 (?).'. [Or whatever the intention actually is.]

Response *Response Status* **W**

ACCEPT IN PRINCIPLE.
Change the offending text to
"The extension operation is used to provide a standardized means for other standards development organizations, in particular ITU-T, to define their own MAC Control protocols outside the scope of this standard. The first application of this is to enable Physical Layer Operations, Administration, and Management (PLOAM) messages related to protection switching, low-level performance monitoring, and management channel set-up (see ITU-T G.984 and ITU-T G.983)."

Dawe, Piers Avago Technologies

Comment Type **TR** *Comment Status* **A** *[TO BE PROCESSED]*

0708_ITU_SG15_to_802_3_LS01.pdf asked for the MPCP message channel to be augmented to be able to carry PLOAM messages related to protection switching, low-level performance monitoring, and management channel set-up. What we have in this draft allows anyone with an OUI (even a stolen one) to transmit anything, for any purpose. Which is too wide. Note unsatisfied D2.0 comment 1923.

SuggestedRemedy

Change bullet d from:
The remainder of the mac_service_data_unit is set equal to the concatenation of the Extension Opcode, the Organizationally Unique Identifier, and the Organization specific data.
to:
d) The remainder of the mac_service_data_unit is set equal to the concatenation of the Extension Opcode, ITU-T's Organizationally Unique Identifier, and the organization-specific data. See ITU-T G.984 and G.983 (?) for further information on the organization-specific data.
and change the footnote to:
The OUI for ITU-T is 00-19-A7.

Response *Response Status* **W**

ACCEPT IN PRINCIPLE.
Change bullet d) to
"The remainder of the mac_service_data_unit is set to the concatenation of the Extension Opcode, ITU-T's Organizationally Unique Identifier (00-19-A7), and the organization-specific data. "

Cl **31C** *SC* **31C.3.1** *P* **33** *L* **6** # 2710

Dawe, Piers Avago Technologies

Comment Type **TR** *Comment Status* **R** *[TO BE PROCESSED]*

Draft says 'Upon reception of EXTENSION frames, the frame is sent
to the MAC CONTROL client.' 31.2 says 'MAC Control clients may include the Bridge Relay Entity, LLC, or other applications.' I don't believe the intended recipient is Bridge Relay Entity, LLC, or the other applications imagined in the base standard. Note unsatisfied TRs in this area.

SuggestedRemedy

Change 'the MAC CONTROL client' to wherever you want these frames to go. One could call it 'the MAC Control organization specific extension client' and add another sentence to 31C.1 'The intended client for the MAC Control organization specific extension is an OMCI? remote management subsystem (see ITU-T G.984 and G.983?).'

Response *Response Status* **W**

REJECT.
OMCI fits perfectly into the category of "other applications". No changes to the draft are believed to be needed.

Hajduczenia, Marek ZTE Corporation

Comment Type **E** *Comment Status* **D**

The text reads "(...) a BER greater than the configurable threshold. When read as a zero, bit 3.81.0 indicates that the receiver is detecting a BER lower than the configurable threshold. (...)". In 45.2.3.2.2 we use additiionally terms line (high BER state) and (low BER state) accordingly.

SuggestedRemedy

Change the indicated text to read "(...) a BER greater than the configurable threshold (high BER state). When read as a zero, bit 3.81.0 indicates that the receiver is detecting a BER lower than the configurable threshold (low BER state). (...)

Proposed Response *Response Status* **W**

PROPOSED ACCEPT.
Insert " (high BER state)" and "(low BER state)" as suggested.

Cl **45** *SC* **45.2.3.29** *P* **44** *L* **26** # 2701

Dawe, Piers Avago Technologies

Comment Type **T** *Comment Status* **R** *SSED], FEC Correction Mode*

I believe that a lot of the power taken by FEC goes on error correction (the stage beyond error detection). A receiver that is happy with its received BER can switch the correction off, with no need for handshaking with the transmitter. This still gives excellent error detection, and remains compatible with PCS error indication.

SuggestedRemedy

Add another register bit in Table 45-107,
3.74.2
FEC error correction disable ability
A read of 1 in this bit indicates that the 10 Gb/s FEC decoder component of the 10/1GBASE-PRX or 10GBASE-PR PCS is able to operate while detecting but not correcting received errors. In a 10/1GBASE-PRX OLT, this bit is undefined.
RO
Insert new 45.2.3.29.1 10 Gb/s FEC error correction disable ability (3.174.3)
When read as a one, bit 3.74.2 indicates that the 10GBASE-PR 10 Gb/s FEC decoder is able to operate while detecting but not correcting received errors (see 76.?.?.?). When read as a zero, the 10GBASE-PR FEC decoder is not able to operate while detecting but not correcting received errors.
Add another register bit in Table 45-108,
3.75.2
FEC error correction disable
A write of 1 to this bit configures the 10 Gb/s FEC decoder to operate while detecting but not correcting received errors. In a 10/1GBASE-PRX OLT, this bit is ignored.
R/W
Insert new 45.2.3.30.1 10 Gb/s FEC error correction disable (3.175.3)
This bit instructs the 10 Gb/s FEC decoder component of the 10GBASE-PR and 10/1GBASE-PRX PCS to operate while detecting but not correcting received errors (see 76.?.?.?)
When bit 3.74.2 written as a one, the 10GBASE-PR 10 Gb/s FEC decoder shall operate while detecting but not correcting received errors (see 76.2.3.3). When bit 3.74.2 is written as a zero, the 10GBASE-PR FEC decoder shall correct as well as detect but received errors according to 76.2.3.3.
The default value of bit 3.74.2 is zero.

Farmer, Jim Wave7 Optics

Comment Type **TR** *Comment Status* **R** *'OCESSED], wavelength plan*

Use of 1590 nm as downstream wavelength for PR(X)10, 20 was removed at last meeting.

This occurs in Table 75-1, 75-5, 75-11, 75-12, 75-13, and 75-20, and throughout section 75.6.1.1

SuggestedRemedy

This goes back to the resolution of comment #2158 at the Seoul meeting, in which the 1590 +/-10 nm downstream wavelength was deleted for Pr(X)10 and 20 PMDs. We seek reconsideration of this action. It is not likely that the narrow wavelength band of 1577 +/-3 nm is going to accommodate all needs. We are concerned about the complexity of the wavelength stabilization circuitry that will have to be added. Also, since this wavelength is closer to the 1550 nm broadcast downstream wavelength, which as a practical matter extends to 1560 nm, the filter needed at the ONU to separate the two wavelengths is going to be more complex. Allowing the use of 1590 nm will help alleviate this problem.

We concur with leaving the wavelength for PR(X)30 at 1577 nm, so this option is not precluded.

Response *Response Status* **C**

REJECT.
Elimination of the 1580 - 1600 nm band was discussed and voted on at September meeting - see #2158 in 3av_0809_comments_d2_0_accepted.pdf.

SAEKI, NAOTO NEC Corporation

Comment Type **TR** *Comment Status* **A** *velength plan - once resolved*

The downstream wavelength for PR10 and PR20 should not be changed without any discussion for power budget. Considering long histry of discussion for PMD, especially wave length and power budget, in 802.3av TF, combination of power budget and wave lenghth in D2.0 were the only solution for convergence of the discussion.

SuggestedRemedy

If wave length change is required, OLT transmitter launched power and ONU receiver sensitivity for PR20 should also be changed as below.
OLT transmitter average launched power: 2 to 5 dBm (same as PR30)
ONU receiver sensitivity (max): -28.5 dBm (same as PR30)
(related parameters will be also changed.)
In this solution, we can reduce the downstream PMD class. (from 3 to 2 classes)
In addition, we ca use same ONU receiver for PR20 and 30 by changing condition of FEC.
(same receiver with FEC for PR30, without FEC for PR20)

Comment Type **TR** *Comment Status* **R**

In this draft, the transmitter and receiver specification is defined by OMA and average power method. This can have a relaxed extinction ratio and lower transmitter cost. Current E-PON(1000BASE-PX-10/20) and 10G(10GBASE-LR) are also along with this manner. The benefit of appling this to ONU tranmitter is relatively large because of its high volume in PON system. This also has a good techinical/cost balance between OLT and ONU.

SuggestedRemedy

Modify the Extinction ratio (min) of 10GBASE-PR-U1 and 10GBASE-PR-U3 to 4.5dB."

Response *Response Status* **U**

Comment Type **TR** *Comment Status* **A** *PROCESSED], dual-rate term*

It is very confusing to use the term 'dual-rate' operation to mean something other that 10/1Gb/s operation supported by 10/1GBASE-PRX PHYs. What is described here seems instead to be dual-mode operation - or coexistence of EPON and 10GEPON - although it is not clear if dual-rate refers to [a] the coexistence of 10GBASE-PR and 10/1GBASE-PRX, [b] the coexistence of 10GBASE-PRX with 1000BASE-PX, [c] 10/1GBASE-PRX and 1000BASE-PX or [d] any of the above.

Also it is not clear why it has to be stated that TDMA techniques have to be used specifically in the case of coexistence to avoid collisions since, as far as I understood, TDMA always has to be used in PONs to avoid collisions.

Finally the term channel is used to refer to the Fibre optic cable plant - see for example Figure 75-3 and Table 75-1 (channel insertion loss).

SuggestedRemedy

Change the text 'An OLT supporting both upstream channels must use TDMA techniques to avoid collisions between transmissions originating from different ONUs, resulting in a dual-rate, burst mode transmission as discussed in Subclause 75.7.' to read 'For implemeantion information related to an OLT that supports both upstream wavebands see subclause 75.7.'. The details of the coexistence should be described in that subclause.

Elsewhere in the draft change 'dual-rate' to read 'coexistence'.

Response *Response Status* **U**

ACCEPT IN PRINCIPLE.

Where appropriate replace term "channel" with "data rate".

In the draft, 10/1GBASE-PRX is referred to as "asymmetric-rate" PHY. The term "dual-rate" is exclusively reserved for OLT Rx being able to receive 10G and 1G signals.
TF believes that term "dual rate" is more specific than term "coexistence" and should be retained.

Implement together with #2373 and #2347.

Frazier, Howard Broadcom

Comment Type **TR** *Comment Status* **A** *mative Annexes, Hidden shall*

This entire subclause, while well written and informative, is tutorial in nature. It discusses implementation choices, not interoperability requirements.
The exception is the shall statement in the last paragraph of the subclause which deals with the damage threshold of a dual rate receiver. A shall statement should not appear in a subclause that is labled "informative", so this requirement should be moved to a normative subclause.

SuggestedRemedy

Delete the subclause and move the damage threshold requirement to a normative subclause.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

This section is informative and deemed useful, thus should be retained.

"Shall" statement was removed per comment #1599. Section can be moved to a separate annex pending resolution to comment #2373.

Comment Type **T** *Comment Status* **A**

Conventions, Conventions, Conventions ...
The phrase "The notation used in state diagrams follow the conventions of 21.5." or something like this is used is 4 separate subclauses in c76. Given that we need to introduce the clause with a "General" paragraph it is suggested that all verbiage addressing "conventions" be move to the introductory material.

SuggestedRemedy

Move subclause heading and text at 76.2.1.3 Pg 162 ln 32 to new subclause 76.1.1, reword to apply to all of c76:
"The notation used in the state diagrams in this clause follows the conventions in 21.5. State diagram variables follow the conventions of 21.5.2 except when the variable has a default value. Should there be a discrepancy between a state diagram and descriptive text, the state diagram prevails. The notation ++ after a counter indicates it is to be incremented by 1. The notation -- after a counter indicates it is to be decremented by 1. The notation -= after a counter indicates that the counter value is to be decremented by the following value. The notation += after a counter indicates that the counter value is to be incremented by the following value. Code examples given in this clause adhere to the style of the "C" programming language."

Remove "convention" text at the following locations:
Pg 179 ln 26 - remove paragraph
Pg 196 ln 25 - remove paragraph
Pg 200 ln 13 - remove paragraph

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
Move subclause heading and text at 76.2.1.3 Pg 162 ln 32 to new subclause 76.1.1, "Conventions"
with the following text:
"The notation used in the state diagrams in this clause follows the conventions in 21.5. Should there be a discrepancy between a state diagram and descriptive text, the state diagram prevails. The notation ++ after a counter indicates it is to be incremented by 1. The notation -- after a counter indicates it is to be decremented by 1. The notation += after a counter indicates that the counter value is to be incremented by the following value. Code examples given in this clause adhere to the style of the "C" programming language."

Cl **76** *SC* **76.2.1.3** *P* **162** *L* **37** # 2712

Dawe, Piers Avago Technologies

Comment Type **TR** *Comment Status* **R** *C Code*

Draft says 'Code examples given in this clause adhere to the style of the "C" programming language.' This is a particularly bad choice, because C is notorious for being too cryptic and compact. D2.0 comment 1962 pointed out that the standard is supposed to be written in English, or state machine notation, or, only when desperate, specified programming languages with references so that the reader can find what the syntax actually means (Pascal and Matlab have been used and are MUCH more readable), and that code should if possible be executable by a machine.

SuggestedRemedy

Be sure that you state anything the reader needs to know, preferably in words, failing that in state diagrams, Pascal or Matlab. Avoid short fragments. Say which takes precedence if English and pseudo-code disagree.

Response *Response Status* **W**

REJECT.
1) The task force pays strong attention to clarity and readability of the produced draft.
2) Many studies show that today, programming language "C" is the most popular language. For example, see http://www.langpop.com/
3) C-style notation was adopted by many other programming environments, for example, Verilog. The TF believes that the C-style notation would be easiest to understand to a largest fraction of potential standard users.
4) Pascal was developed in 1968 and its popularity peaked around 1980. Since then, both popularity and user base of Pascal has been continuously shrinking. Today, Pascal's popularity is far behind C. In fact, studies show it to be in the same category with languages like Delphi, Ada, Scheme. Again, please, refer to http://www.langpop.com/.
5) Pascal programming language is no longer a mandatory course in computer science curriculum (for about 10-15 years now) while C programming language is widely studied. Pascal constructs today may appear unclear and confusing to many engineers who graduated in the past decade.
6) The IEEE Style Manual places no requirements of which programming language to use.
7) The task force believes that the draft development should reflect objective realities of technology development and evolution. Continued use of Pascal language in the draft will make a negative impression on potential users of the standard. The standard may unnecessarily be perceived as obsolete, not being in sync with modern technologies, and may turn potential users to use alternative
standards developed by other SDOs.
8) Use of "C" language is consistent with code examples given in other projects for example see clause 61A.3.

Kramer, Glen Teknovus, Inc.

Comment Type **T** *Comment Status* **A** *Fig 76-10*

Few issues in state giagram 76-10:

1) in state CLASSIFY_VECTOR_TYPE, "DelectCount" should be "DelCount"
2) T_TYPE function expects a 72-bit vector and should not be used on a 36-bit column? Previously, we had "C_TYPE()" defined for that, but it was delected in D2.1.
3) Assigning a column to "Idle" is undefined and ambiguous.
4) Do we want to remove "if" constucts from state code and use states and transitions instead (per comment 202256)?

SuggestedRemedy

1) Replace "DelectCount" with "DelCount"

2) Replace "T_TYPE" (ONLY INSIDE STATE CLASSIFY_VECTOR_TYPE) with "C_TYPE". Add definition of C_TYPE to subclause "76.2.2.1.3 Functions". (Use the definition given in D2.0, subclause 76.1.6.1.5).

3) Replace "Idle" with "IDLE_COLUMN". Add the following definition to subclause "76.2.2.1.1 Constants"
IDLE_COLUMN
TYPE: 36-bit binary
This constants represents a 36-bit column (one XGMII transfer) containing four Idle characters.

4) If we agree to remove "if" constructs from C76 (3 state diagrams are affected), replace state diagrams 76-9, 76-10, and 76-21 with functionally-equivalent diagrams given in 3av_0811_kramer_1.pdf.

In the response to D2.0 comment 2376 you claim that
G(x) = ... is not an equation used for calculation. I don't believe you. Obviously it is an equation, so the style manual applies. If the equations in 76.2.2.4.1 are just window dressing then there is no definition for FEC encoding, as Annex 76A, though very welcome, is only an example and is informative. All we have for normative text is this in 76.2.2.4.2: 'The FEC encoder then prepends 29 "0" padding bits to the 27 twenty-seven 65-bit blocks to form the 223-byte payload portion of an FEC codeword. This data is then FEC-encoded, resulting in the 32-byte parity portion of the FEC codeword.' OK, so where is the normative definition for 'data is FEC-encoded'? As I pointed out in D2.0 comment 1959, it's missing.

SuggestedRemedy

Add a section with a blow-by-blow recipe for creating the parity portion. You might make use of the equations in 76.2.2.4.1. Explain what x is and what L is.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
See proposal in 3av_0811_hirth_3.pdf

Dawe, Piers Avago

Comment Type **TR** *Comment Status* **A**

"This data is then FEC-encoded, resulting in the 32-byte parity portion of the FEC codeword." Apart from some waffly jargon in 76.2.2.4.1, there is no information given for how to create the parity. This standard is supposed to be unambiguous, and in English (or state machine notation). It's not a patent; it needs to be intelligible to customers and testers, not just those very "skilled in the art".

SuggestedRemedy

Add a section with a blow-by-blow recipe for creating the parity portion.

Response *Response Status* **W**

ACCEPT.
See comment #2715 for resolution.

Comment Type **T** *Comment Status* **A**

"To ensure the start of a burst aligns to lane 0 of the XGMII, the PCS is extended to allow removal of leading Idle control characters"
The above sentence is technically incorrect. First, this text talks about Idle Deletion state machine, which in ONU aligns /S/ character not just to lane 0 of XGMII transfer, but to lane 0 of column 0 of a 72-bit vector (as was already explained on page 163, line 38). Second, while the state machine does delete idle vectors to accomodate parity, to do the alignment of the /S/ character it actually insers one idle column (4 bytes), not deletes it.

SuggestedRemedy

Replace the above sentence with the following: "To ensure the start of a burst aligns to lane 0 of column 0, the Idle Deletion process may insert one column consisting of Idle characters, as explained in 76.2.2.1."

Cl **76** *SC* **76.2.2.5.1** *P* **179** *L* **51** # 2742

Ben-Amram, Haim PMC-Sierra

Comment Type **T** *Comment Status* **R**

In previous discussions, it was agreed that using consecutive '1' followed by consecutive '0' pattern for AGC and 1010. pattern for CDR can speed 10G upstream locking significantly.

Consequently, it's most reasonable to separate the Sync Pattern (76.2.2.5.1 Constants paragraph line.50) into "Gain Pattern"(for AGC) and "Sync Pattern"(for CDR)

SuggestedRemedy

In section 76.2.2.5.1 Constants, define a "Gain Pattern" as: 10 followed by 0x FF FF FF 00 00 00 C5 49 (10 1111 1111 1111 1111 1111 1111 1111 0000 0000 0000 0000 0000 0000 0011 1010 0010 1001) and "Sync Pattern" as: 0x 55 55 55 55 55 55 55 55 (10 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010).

Adding "Gain Time" to:
Page 131 ' Figure 76-14
Page 190 ' lines 6, 17, 26,
Page 191 ' line 6
Page 194 ' lines 28, 39
Page 198 ' lines 14, 22
Page 215 ' line 27
Page 216 ' lines 40, 52
Page 222 ' lines 14, 35
Page 223 ' line 26
Page 224 ' line 19

Revert to the Burst Delimiter designed for Hamming Distance from the 1010... pattern.

In the data detector, add an additional state which transmits the Gain Pattern for the amount of time indicated by Gain Time.

In Figure 76-17 line 13, need to add additional state for Gain Pattern (see slide)

Response *Response Status* **C**

REJECT.
The selected sync pattern is deamed a reasonable compromise to achiev both gain setting and synchronization.
[changed subclause from blank to 76.2.2.5.1, Page from 132 to 179 and Line from 50 to 51]

Dawe, Piers Avago

Comment Type **TR** *Comment Status* **A**

This standard is supposed to be written in English, or state machine notation, or, only when desperate, specified programming languages with references so that the reader can find what the syntax actually means (Pascal and Matlab have been used), and that code should if possible be executable by a machine. You can't just insert snippets of unattributed pseudo-code in I don't know what syntax.

SuggestedRemedy

If this pseudo-code fragment says anything that the preceding sentence doesn't, replace it with another sentence, in English. If it doesn't, delete it. Similarly in 76.2.3.1.3, 76.2.3.3.3

Response *Response Status* **U**

ACCEPT IN PRINCIPLE.
Insert at end of 76.1.6.1.4
"Code examples given in c76 adhere to the style of the "C" programming language."
Move 76.1.6.1.4 to new subclause 76.2.1.3

Dawe, Piers Avago Technologies

Comment Type **T** *Comment Status* **R** *FEC Correction Mode*

I believe that a lot of the power taken by FEC goes on error correction (the stage beyond error detection). A receiver that is happy with its received BER can switch the correction off, with no need for handshaking with the transmitter. This still gives excellent error detection, and remains compatible with PCS error indication.

SuggestedRemedy

Change
The FEC decoder corrects or confirms the correctness of the twenty-seven 66-bit blocks contained in the FEC codeword based on the four 66-bit blocks of parity information.
to
In the default mode of operation, the FEC decoder corrects or confirms the correctness of the twenty-seven 66-bit blocks contained in the FEC codeword based on the four 66-bit blocks of parity information. If FEC error correction is disabled, the FEC decoder confirms the correctness of the FEC codeword but does not attempt to correct the FEC codewords.

Response *Response Status* **C**

REJECT.
An implementation which wishes to save power in this manner may choose to silently disable the FEC Correction block as long as the implementation complies with the standard.

The Read_outbuffer(i) C code and the corresponding text in p194, "If the variable decode_failures is set to be 1, then all each sync headers for header of the received payload blocks of in the FEC codeword is set to take a value of {SH.0,SH.1} = binary 00." does not match.

SuggestedRemedy

Change the C code as the following,

```
Read_outbuffer[i]
    {
    int offset = 29+i*65
       for(j=0, j<65, j++)
          {
          rx_coded_corrected<j+1> = outbuffer[j+offset]
          }
       if (!decode_success AND mark_uncorrectable)
          {

          rx_coded_corrected<1>=0
          rx_coded_corrected<0>=rx_coded_corrected<1>
          }
       else
          {
          rx_coded_corrected<0>=!rx_coded_corrected<1>
          }
    BlockToDescrambler()
    }
```

Hajduczenia, Marek ZTE Corporation

Comment Type **TR** *Comment Status* **A**

The pseudo code of the Read_outbuffer[i] function has a few issues with it:
(1) on page 194, lines 53-54 we say that "If the variable decode_failures is set to 1, then each sync headers for header of the received payload blocks in the FEC codeword is set to a value of binary 00.". Yet, in Read_outbuffer[i] function we use "!decode_success" variable
(2) it would make much more sense (and much safer) if the missing bit [0] in the SH was constructed explicitly instead of implictly.

SuggestedRemedy

(1.a) change "if (!decode_success AND mark_uncorrectable)" to "if (decode_failures >= 1 AND mark_uncorrectable)"
(1.b) Change "If the variable decode_failures is set to 1, then each sync headers for header of the received payload blocks in the FEC codeword is set to a value of binary 00." to "If the decode_failures counter is greater or equal to 1, each sync headers for header of the received payload blocks in the FEC codeword is set to a value of binary 00."
(2.a) Change "rx_coded_corrected<0>=rx_coded_corrected<1>" to
"rx_coded_corrected<0> = 0
rx_coded_corrected<1> = 0"
(2.b) Change "rx_coded_corrected<0>=!rx_coded_corrected<1>" to
"rx_coded_corrected<0> = 0
rx_coded_corrected<1> = 1"

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.
At page 194 line 53:
Replace "decode_failures" with "decode_success" (2 places) and change "1" to "0" (1 place).
(2) On page 196 line 9 Change "rx_coded_corrected<0>=rx_coded_corrected<1>" to
"rx_coded_corrected<0> = 0
rx_coded_corrected<1> = 0"

Kramer, Glen Teknovus, Inc.

Comment Type **T** *Comment Status* **A** *[TO BE PROCESSED]*

Refering to Figures 77-13 and 77-14.

In calculating the packet_initiate_delay values, the MPCP always assumes 12 bytes of IPG. In reality, IPG after MAC/RS may vary from 9 to 15 bytes. This often causes the packet_initiate_delay to undercount the required FEC overhead and results in 32 byte times of delay for the consequent packet(s). For more details, see 3av_0811_kramer_2.pdf

SuggestedRemedy

Modify FEC_Overhead() function to account for possible IPG increase in MAC/RS. The exact modifications are presented in 3av_0811_kramer_2.pdf.

Response *Response Status* **C**

ACCEPT.

Straw Poll #6

Kramer, Glen Teknovus, Inc.

Comment Type **T** *Comment Status* **A** *BE PROCESSED], byteTime*

OLT Control Multiplexer (Figure 77-13) calculates packet_initiate_delay to guarantee "no-delay" transfer for the next packet. However, the employed mechanism only works if the next packet is available from higher layers when the packet_initiate_delay expires. Simulations show that in case of light load, the next packet may become available during intervals when the PCS is transmitting parity blocks. These packets will experience delay variability of 1.6 TQ (32 byte times). For more explanation, see 3av_0811_kramer_2.pdf.

SuggestedRemedy

We can either
1) accept this variability and increase guard bands (contrary to previous efforts)

2) Fix it by delaying a frame before timestamping it in MPCP until the parity blocks are sent. The exact proposed modifications are presented in 3av_0811_kramer_2.pdf.

Comment Type **T** *Comment Status* **A** *BE PROCESSED], byteTime*

ONU Control Multiplexer (Figure 77-14) calculates packet_initiate_delay to guarantee "no-delay" transfer for the next packet. However, the employed mechanism only works if the next packet is available from higher layers when the packet_initiate_delay expires. Simulations show that in case of light load, the next packet may become available during intervals when the PCS is transmitting parity blocks. These packets will experience delay variability of 1.6 TQ (32 byte times). For more explanation, see 3av_0811_kramer_2.pdf.

SuggestedRemedy

We can either
1) accept this variability and increase guard bands (contrary to previous efforts)

2) Fix it by delaying a frame before timestamping it in MPCP until the parity blocks are sent. Exact proposed changes are shown in 3av_0811_kramer_2.pdf

Comment Type **TR** *Comment Status* **R** *SSED], delayed to after lunch*

Figure 77-29, Figure 77-23 need changes along with the accompanying set of variables.
General outline of the problem:
(1) if ONU DBA client denies registration, NACK state is entered on Figure 77-23. Variable "registered" is false.
(2) in the result of a denied registration, this ONU should send a REGISTER_ACK MPCPDU with NACK flag set. For this, a time slot is necessary
(3) OLT allocates a slot for this ONU to send a REGISTER_ACK MPCPDU with NACK flag set. GATE MPCPDU with this slot reaches an ONU and is dropped (register flag is false, discovery is also false).
(4) ONU cannot effectively send a REGISTER_ACK MPCPDU with NACK flag set.
See suggested remedy field for suggested remedy.

SuggestedRemedy

(1)
Add a new variable to 77.3.3.2:
register_nack
TYPE: Boolean
This variable indicates whether registration was denied by ONU DBA client. It is set to true in NACK state in Figure 77-23 and set to false in REGISTER_ACK state in Figure 77-23.
DEFAULT: false

(2)
Modify Figure 77-23:
(1) add "register_nack <= false" in state REGISTER_ACK
(2) add "register_nack <= true" in state NACK

(3)
Modify Figure 77-29:
modify condition
"else if (!discovery * registered * grant_number > 0)"
to read
"else if (!discovery * (registered + register_nack) * grant_number > 0)"

(4)
add a new entry in 77.3.5.2
register_nack
This variable is defined in 77.3.3.2.

(5)
change the name of state "NACK" in Figure 77-23 to "REGISTER_NACK" - it does not have to coincide with the MPCPDU name but be descriptive

See 3av_0811_hajduczenia_3.pdf for new format of Figure 77-23 and 77-29 with the implemented changes, along with the editorial instructions for the remaining changes.

Response *Response Status* **C**

Cl **77** *SC* **77.3.5.6** *P* **293** *L* **15** # 2600

Kramer, Glen Teknovus, Inc.

Comment Type **TR** *Comment Status* **D** *Figure 77-30*

In state diagram 77-30, calculation of maxDelay is incorrect. The registering ONU will always transmit one full FEC codeword, even though inside it may have just one REGISTER_REQ MPCPDU. Currently, the formula overestimates the maximum allowed delay and may result in ONU transmitting outside of the discovery window.

SuggestedRemedy

1) Use the following formula in state RANDOM WAIT:

maxDelay <= currentGrant.length - laserOnTime - syncTime - laserOffTime - discoveryGrantLength

2) redefine discoveryGrantLength as follows:

"This constant represents the duration of ONU's transmission during discovery attempt. discoveryGrantLength is equal to one FEC codeword (see FEC_CODEWORD_SIZE in 77.2.2.1) expressed in units of time_quanta.
VALUE: 13"

Kozaki, Seiji Mitsubishi Electric

Comment Type **T** *Comment Status* **A** *PROCESSED], Figure 77-30*

In figure 77-30, Delimiter and IDLE aren't subtracted from stopTime.

SuggestedRemedy

Modify START_TX as below.
stopTime = currentGrant.start + currentGrant.length - laserOnTime - LaserOffTime - syncTime - ((BURST_DELIMITER + END_BURST_DELIMITER + 2*IDLE)/tqSize)

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Define a new variable as follows:
BurstOverhead
TYPE: integer
This variable represents the burst overhead and equals the sum of laserOnTime, laserOffTime, syncTime and an additional two time_quanta to account for END_BURST_DELIMITER and two leading IDLE vectors of the payload. This variable is expressed in units of time_quanta.

Modify START_TX as below.
stopTime = currentGrant.start + currentGrant.length - BurstOverhead

The REGISTER_REQ Discovery information field (Table 77-6) does not match the GATE Discovery Information field (Table 77-3)

In GATE, bit 0 means:
"0 - OLT does not support 1 Gb/s reception
1 - OLT supports 1 Gb/s reception"

In REGISTER_REQ, bit 0 means:
"0 - ONU transmitter is capable of 1 Gb/s
1 - ONU transmitter is not capable of 1 Gb/s"

Same for bit 4.

SuggestedRemedy

make bits meanings uniform. Change bits 0 and 4 in table 77-6 as below;

bit 0:
"0 - ONU transmitter is not capable of 1 Gb/s
1 - ONU transmitter is capable of 1 Gb/s"

bit 4:
"0 - 1 G registration is not attempted
1 - 1 G registration is attempted"

Also for bits 4 and 5, change "G" to "Gb/s"

Response *Response Status* **C**

ACCEPT.

Cl **77** *SC* **77.3.6.4** *P* **305** *L* **23** # 2744

Hajduczenia, Marek ZTE Corporation

Comment Type **TR** *Comment Status* **A** *], laserOnTime / laserOffTime*

(1) Current definition of the laserOnTime and laserOffTime in REGISTER MPCPDU does not match what is done in Figure 77-23. In 77.3.6.4 we have the following definition:
"Echoed Laser On Time. This is an unsigned 8 bit value signifying the Laser On Time for the given ONU transmitter. The value is expressed in the units of time_quanta. The value is delivered to the ONU for confirmation purposes only and its utilization is not prescribed in this specification."
"Echoed Laser Off Time. This is an unsigned 8 bit value signifying the Laser Off Time for the given ONU transmitter. The value is expressed in the units of time_quanta. The value is delivered to the ONU for confirmation purposes only and its utilization is not prescribed in this specification."
According to Figure 77-23, laserOnTime and laserOffTime is compared with laserOnTimeCapability and laserOffTimeCapability and recorder only if the assigned value is <= than what ONU can do. This means that the values delievered in REGISTER MPCPDU do not necessarily be an echo of the value delivered by the ONU in the REGISTER_REQ MPCPDU
(2) Text on page 255, line 24 "Also, the OLT echoes the maximum number of pending grants, laser on time and laser off time." also needs a change accordingly.
(3) Figure 77-15 on page 256, line 18 needs to be updated to correct "echo of Laser On Time" and "echo of Laser Off Time"
(4) Figure 77-35 on page 306, lines 20-24 needs to be updated to correct "Echoed Lased On Time" and "Echoed Lased Off Time"
(5) update description of laserOnTime and laserOffTime on page 266, lines 29-36 in the MA_CONTROL.request(DA, REGISTER...) primitive

SuggestedRemedy

Change bullet "g)" in REGISTER MPCPDU to read as follows:
"Target Laser On Time. This is an unsigned 8 bit value, expressed in the units of time_quanta, signifying the Laser On Time for the given ONU transmitter. This value may be different from Laser On Time delivered by the ONU in the REGISTER_REQ MPCPDU during the Discovery process. The ONU updates the local laserOnTime variable per state diagram Figure 77-23. Further utilization of this variable is not prescribed in this specification."
Change bullet "h)" in REGISTER MPCPDU to read as follows:
"Target Laser Off Time. This is an unsigned 8 bit value, expressed in the units of time_quanta, signifying the Laser Off Time for the given ONU transmitter. This value may be different from Laser Off Time delivered by the ONU in the REGISTER_REQ MPCPDU during the Discovery process. The ONU updates the local laserOffTime variable per state diagram Figure 77-23. Further utilization of this variable is not prescribed in this specification."
(2) Change the indicated text to read as follows "Moreover, the OLT echoes the maximum number of pending grants. The OLT sends also the target value of laser on time and laser off time, which may be different than laser on time and laser off time delivered by the ONU in the REGISTER_REQ MPCPDU."
(3) in Figure 77-15, change "echo of Laser On Time" to "target Laser On Time"; change "echo of Laser Off Time" to "target Laser Off Time"

(4) in Figure 77-35 on page 306, lines 20-24, change "Echoed Lased On Time" to read "Target Lased On Time"; and "Echoed Lased Off Time" to "Target Lased Off Time"
(5) (5) update description of laserOnTime and laserOffTime on page 266, lines 29-36 in the MA_CONTROL.request(DA, REGISTER...) primitive, where "laserOnTime" parameter should read "this parameter carries the target value of Laser On Time for the given ONU transmitter. This value may be different than the laserOnTime value carried in the REGISTER_REQ MPCPDU received from the same MAC during Discovery stage. This parameter has the default value of 0." and "laserOffTime" parameter should read "this parameter carries the target value of Laser Off Time for the given ONU transmitter. This value may be different than the laserOffTime value carried in the REGISTER_REQ MPCPDU received from the same MAC during Discovery stage. This parameter has the default value of 0."

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Change bullet "g)" in REGISTER MPCPDU to read as follows:
"Target Laser On Time. This is an unsigned 8 bit value, expressed in the units of time_quanta, signifying the Laser On Time for the given ONU transmitter. This value may be different from Laser On Time delivered by the ONU in the REGISTER_REQ MPCPDU during the Discovery process. The ONU updates the local laserOnTime variable per state diagram in Figure 77-23."

Change bullet "h)" in REGISTER MPCPDU to read as follows:
"Target Laser Off Time. This is an unsigned 8 bit value, expressed in the units of time_quanta, signifying the Laser Off Time for the given ONU transmitter. This value may be different from Laser Off Time delivered by the ONU in the REGISTER_REQ MPCPDU during the Discovery process. The ONU updates the local laserOffTime variable per state diagram in Figure 77-23."

(2) Change the indicated text to read as follows "Moreover, the OLT echoes the maximum number of pending grants. The OLT also sends the target value of laser on time and laser off time, which may be different than laser on time and laser off time delivered by the ONU in the REGISTER_REQ MPCPDU."

(3) in Figure 77-15, change "echo of Laser On Time" to "target Laser On Time"; change "echo of Laser Off Time" to "target Laser Off Time"

(4) in Figure 77-35 on page 306, lines 20-24, change "Echoed Laser On Time" to read "Target Laser On Time"; and "Echoed Laser Off Time" to "Target Laser Off Time"

(5) update description of laserOnTime and laserOffTime on page 266, lines 29-36 in the MA_CONTROL.request(DA, REGISTER...) primitive, where

"laserOnTime" parameter should read "this parameter carries the target value of Laser On Time for the given ONU transmitter. This value may be different than the laserOnTime value carried in the REGISTER_REQ MPCPDU received from the corresponding ONU MAC during Discovery stage. This parameter has the default value of 0."

"laserOffTime" parameter should read "this parameter carries the target value of Laser Off Time for the given ONU transmitter. This value may be different than the laserOffTime value carried in the REGISTER_REQ MPCPDU received from the corresponding ONU MAC during Discovery stage. This parameter has the default value of 0."

Lynskey, Eric Teknovus

Comment Type **E** *Comment Status* **D**

The line numbers on the front matter have not been raised, as requested in comment 2172 against D2.0.

SuggestedRemedy

Raise line numbers in front matter.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.
It appears that there are line number in the front matter for both th eplain and the marked-up versions.

Cl **99** *SC* *P* **iii** *L* **23** # 2732

Lynskey, Eric Teknovus

Comment Type **E** *Comment Status* **D**

The front matter in D2.0 followed the note on page 3 of D2.0 and all of the front matter was numbered using arabic page numbers. Somehow, this has been reverted back to Roman numerals for D2.1. I searched through the accepted comment database for D2.0 and could find no such change requested. Please be consistent with the note in the front matter and use arabic numbers or remove the note and use Roman numerals.

SuggestedRemedy

Revert to page numbering of D2.0.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT.
Change to numbers.

Hajduczenia, Marek ZTE Corporation

Comment Type **ER** *Comment Status* **D** *Draft Ref*

Inconsistent draft number. Title states it is D2.1 and in frontmatter, we still have D1.802.

SuggestedRemedy

Change "Draft D1.802 is prepared" to "This draft is prepared" or "Draft D2.1 is prepared". In the latter case, make sure You use external draft version reference file, which we use for the file template

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.

Thanks for updating this table

SuggestedRemedy

Please put pi in alphabetical order, between mu and omega (omega is the last letter, the o before p is omicron). Also, table says 'Upper case Pi' but not 'Upper case Omega': either describe all the Greek letters as upper case or lower case as appropriate, or none of them.

Proposed Response *Response Status* **W**

PROPOSED ACCEPT IN PRINCIPLE.
Will place pi between mu and omega

Comment Type **TR** *Comment Status* **R** *[TO BE PROCESSED]*

This abstract avoids telling the reader that there is a draft new transmission scheme in Annex 31C, unrelated to anything described here.

SuggestedRemedy

Either remove the draft new transmission scheme in Annex 31C or add text here to mention it. This could be done by an additional objective.

Response *Response Status* **W**

REJECT.
Front matter is not part of the published standard.
Independently of that, the abstract does not need to list every minor mechanism added to the draft. The EXTENSION MAC Control message was added at the directive of 802.3 Working Group at the July 2008 plenary meeting. Please review meeting minutes.

Response accepted by voice vote without opposition.

'As such, the 10G-EPON extends the network architecture of P802.3ah 1G-EPON'
I do not know what 'As such' means here. Has the network architecture really been extended? As 802.3ah was approved, should the P be dropped? But as this document is written as an amendment to P802.3ay/D2.2, there is no separate 802.3ah anyway.

SuggestedRemedy

10G-EPON uses the network architecture of IEEE Std 802.3's 1G-EPON
