

Upstream Probe Sequence for 802.3bn

Leo Montreuil, Broadcom

Upstream Probe Sequence (1 of 2)

- DOCSIS 3.1, section 7.4.16.3:
 - PRBS sequence $X^{12} + X^9 + X^8 + X^5 + 1$
 - Seed = 3071 d
- Recommend for 802.3bn (section 102.4.3.3):
 - Use the D3.1 sequence, seed and framing
 - 2 symbols (repeat symbol twice) using all non-excluded subcarriers
 - Seed = BFF h
 - Should we support skipping/staggering probe pattern?
 - No. There is no advantage at using staggered probe in EPoC.

Upstream Probe Sequence (2 of 2)

- Sequence of length 4096 is:

1 1 1 1 1 1 1 1 1 1 0 1 0 1 1 1 1 ..

.....

1 0 1 1 1 0 0 1 0 1 0 0 0 1 0 1

- Sequence is mapped to BPSK:

0 mapped to a BPSK pilot of +1

1 mapped to a BPSK pilot of -1

Proposed Motion

Move to adopt the Upstream Probe Sequence recommendation on pages 2 and 3 of montreuil_3bn_02_0514.pdf without staggering. Update the draft via the next comment round.

Moved:

Seconded:
