

Comment (Figure 145-31, page 207 line 22)

Per the latest changes we did to include equipment connector in the PSE PI and in the PD PI for unbalance tests, Figure 145-31 and NOTE 1 in line 33 need some adjustments.

Proposed remedy:

1. Replace figure 145-31 with the following attached.

1.1 Editor: Don't miss the rectangular dashed line, The PD PI label and PD PI dashed border line. They are the significant changes.

1.2 Change NOTE 1 from:

"NOTE 1— $R_{source}$  includes the connector resistance at the PD PI, for which the maximum recommended value is 20 m $\Omega$  per contact."

To:

"NOTE 1— $R_{source\_min}$  and  $R_{source\_max}$  include all the test verification model components up to the PD PI"
