

# **50GAUI and 100GAUI C2C and C2M Baseline Proposals for 50G and 100G Ethernets**

Mike Peng Li, Adee Ran  
Intel Corporation

Richard Mellitz  
Samtec

Ali Ghiasi  
Ghiasi Quantum LLC

For IEEE 802.3cd

# Background and Motivation (I)

- In May/Whistler meeting, we have passed the following motion:

**Motion #10:** 3:31 p.m.

Move to adopt li\_3cd\_01\_0516 as the baseline for 50GAUI and CAUI-2 chip-to-chip and chip-to-module electrical I/O interfaces

- M: Mike Li
- S: Gary Nicholl
- Technical ( $\geq 75\%$ ),
- Y: 75 N: 0 A: 7
- Results: passes 3:42 p.m.

Chair clarified that baseline means that the technical details are sufficient to address an objective in the Task Force. Chair noted that “basis” used in an earlier motion indicates the general direction of the Task Force.

- We did not adopt 50GAUI-2 and 100GAUI-4 baselines due to FEC lane/distribution options were not settled then

# Background and Motivation (II)

- We have use case demand and complete PCS/FEC/PMA architecture baseline proposal (see nicholl\_3cd\_01\_0716.pdf) now which calls for additional 50GAUI and 100GAUI baseline proposals.

# 50GAUI-2 C2C and C2M Baseline Proposals for 50G Ethernet

- 50GAUI-2 (2x26.5625 Gbps, NRZ) C2C and C2M, to be consistent with the latest CDAUI-16 but with 2 rather than 16 lanes
- 50GAUI-2 (2x25.78125 Gbps, NRZ) C2C and C2M, to be consistent with the latest CAUI-4 (as defined in Annex 83D and 83E) but with 2 rather than 4 lanes

# 100GAUI-4 C2C and C2M Baseline Proposal for 100G Ethernet

- 100GAUI-4 (4x26.5625 Gbps, NRZ) C2C and C2M, to be consistent with the latest CDAUI-16 but with 4 rather than 16 lanes

# Summary: 50GAUIs C2C and C2M

## Baseline Proposals for 50G Ethernet

- 50GAUI-1 (1x53.125 Gbps, PAM4) C2C and C2M, to be consistent with the latest CDAUI-8 but with an 8<sup>th</sup> of the number of lanes
- 50GAUI-2 (2x26.5625 Gbps, NRZ) C2C and C2M, to be consistent with the latest CDAUI-16 but with 2 rather than 16 lanes
- 50GAUI-2 (2x25.78125 Gbps, NRZ) C2C and C2M, to be consistent with the latest CAUI-4 (as defined in Annex 83D and 83E) but with 2 rather than 4 lanes

Adopted

To be adopted

Added for clarity

# Summary: 100GAUIs C2C and C2M

## Baseline Proposals for 100G Ethernet

- CAUI-2 (2x53.125 Gbps, PAM4) C2C and C2M, to be consistent with the latest CDAUI-8 but with a 4<sup>th</sup> of the number of lanes
- 100GAUI-4 (4x26.5625 Gbps, NRZ) C2C and C2M, to be consistent with the latest CDAUI-16 but with 4 rather than 16 lanes
- 100GAUI-4 (4x25.78125 Gbps, NRZ) C2C and C2M, to be the same as the latest CAUI-4 (as defined in Annex 83D and 83E)
