What Ethernet Offers

- Better connectivity to the enterprise systems
 - Recipes and build instructions
 - Content data logging
 - Material content
 - Operator content
 - Inspection
 - Testing/sorting
 - “Go - No Go” comparisons
 - Work-in-process availability
 - Inventory and distribution
- Better transportation for large messages
- A more truly international standards because of IEEE

What Do Industrials Want?

- All Temperature All Weather Ruggedness
 - Suggestions to other organization
 - Temperature & Environmental Ingress can be dovetail with ethernet to the home requirements
 - Vibration, Insertion Count, Noise - Industrials need to enhance
- Determinism
 - Full Duplex and Priority Messaging enables enough determinism for cell level control
 - If EPONs or other technology is used that makes use of Time Multiplexing
 - Fixed attendance and fixed length TDMA at phy level would enable determinism at a control level for industrials
 - Maybe this could dovetail with video delivery to the office/home

What Do Industrials Want?

- Timestamp (use of a system clock or GPS clock)
 - Useful in process application to know when an action starts and rates
 - Possible suggestions to other IEEE 802 groups for recording service levels and for billing
- VLAN
 - Industrials are just starting to appreciate the value of VLANs
 - More standardization if possible
 - Won't object to more VLANs - quantity
