

MPCP Message to a Single LLID?

Gerry Pesavento (gerry.pesavento@teknovus.com)

If a *single LLID per ONT* were chosen for the standard, could one implement an ONT with multiple LLIDs, and be interoperable and standards compliant?

Example: Can ONT2 be implemented and be interoperable with a single LLID/ONT standard?

Answer: Only if the OLT sees LLID2 and LLID3 as two “virtual ONTs”.

Requirement: Always MPCP message to a single LLID

Study: Scalability
