Liaison report from IEEE 802.3 on Cabling Guidelines for Remotely Powered Devices, WPANs and WLAN Access Points

Date: 2003-24 July
To: ISO/IEC JTC 1/SC 25/WG
From: IEEE 802.3, Bob Grow, Chair IEEE 802.3 (bob.grow@intel.com)

Subject: Cabling Guidelines for Remotely Powered Devices, WPANs and WLAN Access Points

We would like to express our appreciation to ISO/IEC JTC 1/SC 25/WG 3 for inviting IEEE 802.3 to comment on PDTR ISO/IEC XXXXX: Information technology - Customer premises cabling for wireless access points.

In sentence 423, is it the assumption of the working group that the TO may also be placed in areas that are not readily accessible to building occupants? This will frequently be the case in practice, and it would be helpful to state this explicitly.

To your specific request to review clause 9, we feel it sufficiently accommodates the needs 802.3af-2003™.

Regards,

Robert M. Grow
Chair, IEEE 802.3 Working Group
