- Work done:
 - Comment resolution for .3br D3.0 (details see next slides)

Report of the joint 802.3br/802.1TSN

MAC Sec Standards:

There is an identified customer need to support strict-in-order secure delivery over provider bridged networks, and this is being addressed by P802.1AEcg. This proposed standard enables multiple, per traffic class, transmit secure channels for MAC and thus will also meet strict ordering requirements (within traffic class, with express or preemptable transmission being selected for all the priorities allocated to a traffic class) for preemption.

802.1 TSN: IEEE 802.1Qbu is ready for RevCom but not submitted due to dependency on IEEE 802.3br.
