After the presentation of the two slides, there were questions about the referenced documents. Vijay Aluk objected to being named 2nd on the 802.18 motion. Rich Kennedy attempted to clarify the situation, but challenges to the explanation resulted in additional confusion. After 15 minutes of discussion and further questions, additional time was needed to assemble accurate factual information for consideration by the EC.

Event "T79: REPEAT" in the picture. It was discussed to use an external trigger to restart the Gate control list in order to enable use-cases with non-rational ns intervals like 1/60 second. The Cycle Timer state machine (8.6.9.1) ensures that the cycle time is maintained.
SuggestedRemedy
Remove line with T79 from the picture and use an external trigger event for the restart of the list.

5.031 ME: New PAR: IEEE P802.3bz 2.5 Gb/s and 5 Gb/s Ethernet

IEEE P802.3bz 2.5 Gb/s and 5 Gb/s Ethernet PAR and CSD responses

Title

Standard for Ethernet Amendment: Media Access Control Parameters, Physical Layers and Management Parameters for 2.5 Gb/s and 5 Gb/s Operation

Scope of project

This amendment defines Ethernet Media Access Control (MAC) parameters, physical layer specifications, and management objects for the transfer of Ethernet format frames at 2.5 Gb/s and 5 Gb/s over balanced twisted pair transmission media used in structured cabling.

IEEE P802.3bz 2.5 Gb/s and 5 Gb/s Ethernet PAR and CSD responses

Need

There is a need for greater than 1 Gb/s Ethernet connectivity over structured twisted pair wiring to serve existing and growing needs of IEEE 802.11ac based enterprise wireless access points. Availability of 2.5 Gb/s and 5 Gb/s signaling technologies enables interconnect solutions for enterprise wireless access points to switch applications to be served over structured Cat5e or better twisted pair cabling.

Challenges regarding the accuracy of the documents referened in the revised motion continues. Shellhammer wished to amend the motion. Confusion continues, the 802 Chair directs the Lynch to conduct an EC email ballot on the item with accurate background information. Upon reflection the Chair gives the instruction the EC ballot be conducted, if it fails, then Shellhammer may request the conduct of another EC email ballot to (hopefully) reach consensus.

NG60 PAR Scope

- **Supporting a maximum throughput of at least 20 Gbps**
 - Throughput is measured at the MAC data service access point
 - Expected to provide improvements of over 3 times
- **Maintaining or improving the power efficiency per station**
- **Indoor and outdoor operations in license-exempt bands above 45 GHz**
- **Enabling backward compatibility and coexistence with legacy directional multi-gigabit devices (defined by IEEE 802.11ad-2012 amendment) operating in the same band**

Need for the Project

- **Increasing demand for capacity and new applications are driving the desire to enhance throughput of 802.11ad to support these needs**
 - Enterprise, residential, operator hotspots, public scenarios
 - Video traffic is expected to be the dominant type of traffic in WLAN deployments, e.g., media appliances are moving to UHD content, driving a ten fold increase in storage capacity and bandwidth requirements
 - Lot of industry interest in fronthaul and backhaul communication using 60 GHz
- **Better support of real-time applications**
 - WLAN users demand improved performance (including throughput and power efficiency) in delivering their real-time applications
 - Operators expect sufficient user experience to offload traffic on WLAN

Usage environments

- **Environments discussed in the study group include:**
 - Crowded public spaces, e.g., airports, shopping mall, train stations
 - Enterprise and small offices
 - Data center
 - Home
 - Outdoor hotspots

New and enhanced applications

- **Applications discussed in the study group include:**
 - Augmented reality and virtual reality
 - Close-reality and interactive gaming
 - Indoor backhaul with multi-hops (e.g., in data centers)
 - Mass data distribution/video on demand systems in public spaces
 - Mobile fronthauling
 - Mobile offloading
 - Video distribution and streaming at home (e.g., 3D UHD, 8K UHD)
 - Wireless backhauling

Technical Feasibility

- **The principle of scaling the IEEE 802.11 PHY and MACs to higher throughput is well established by previous amendments, such as IEEE 802.11ac-2014 and IEEE 802.11ad-2012**
- **NG60 builds on the broad knowledge base and system design experience of IEEE 802.11ad devices.**
 - For example, NG60 will consider MIMO and channel bonding that not only significantly improve throughput, but also allow reuse of technologies and testing being used in the previous amendments.

Distinct Identify and Compatibility

- **NG60 is different from other IEEE 802 wireless standards/projects in that it is specific for 802.11 WLANs and aims to provide data rates in excess of 20 gigabits per second for point-to-point and point-to-multipoint indoor and outdoor usages for license-exempt bands above 45 GHz.**
- **NG60 will ensure coexistence and backwards compatibility with IEEE 802.11ad, thus creating a solution compatible with existing IEEE 802.11 deployments.**
- **Coexistence with other systems for license-exempt bands above 45 GHz will be evaluated and documented in Coexistence Assurance document.**

Next Steps:

- **The expected remaining unsatisfied comments supporting no votes are expect to fall into a small number (4-5) similar categories**
- **Would like to request approval via EC ballot once we have achieved unconditional approval status**
- **Expect this to be by the Vancouver Interim this May**

Heile informed the chair that he would not be requesting conditional approval, as some comments are still being resolved. He did note that he would like to request approval via EC ballot once unconditional approval status has been achieved. He thought this would be by the Vancouver Interim in May 2016.

802.15.3e PAR to NesCom 11ay Comparison

History: 802.15.3 and 802.15.3c (60GHz High Rate PHY) preceded 802.11ad and 802.11ay. 802.15.3e builds on 802.15.3 and 802.15.3c to support a new class of applications in the 802.15.3 family.

Differences wrt 11ay:

- 15.3e has a very focused scope (high data rate closed-proximity applications) whereas the scope of 11ay is much broader. The focused approach yields in a much less complex solution optimized to the needs of this specific class of applications.
- Also, the speeds, use cases, connection model, and spatial density model are completely orthogonal.
 - Speeds: 11ay = 20 Gbps,
15.3e = 100 Gbps
 - Use cases: 11ay = higher throughput wireless LAN, cellular offload, wireless docking, wireless display and outdoor/indoor wireless backhaul
15.3e = rapid large multimedia data downloads and file exchanges between two close proximity devices, i.e. mobile devices, stationary devices (kiosks, ticket gates, etc.), and other wirelessly enabled data storage devices
 - Connection model: 11ay = fixed, portable, and moving stations (STAs) within a local area
15.3e = close proximity (typically 10cm or less), fast setup (2ms or less), and point-to-point.
 - Spatial Density: 15.3e proposes to achieve spatial density without beam forming, consistent with the lower complexity theme.

In short, these are very different standards which happen to be using the same unlicensed spectrum. It boils down to the need for a point to point link that is stripped of CSMA, beacons, or anything else to eliminate wasted time. 802.11 can have a high data rate but it has requirements for association times, CSMA delays, beacons overhead, etc which disallow its use for this class of application.

802.24.2 IoT Task Group Formation

Background

- 802.24 has been hosting meetings for IoT cross 802 WG interest since March 2014.
- In July, the Executive Committee adopted rules for creating Task Groups in 802.24.
 - Currently, there is one 802.24 Task Group, 802.24.1 Smart Grid Task Group
- We now seek to create a new Task Group, IEEE 802.24.2 IoT Task Group
- Response to comment period in in 24-15-0010-01

New TG process (1)

- An individual(s) requests time for a presentation (the best is a tutorial slot) that describes the new application category. The presentation should be:
 - Application focused
 - Supported by multiple members and multiple companies
- If the response from the presentation is favorable, the individual(s) requests that the IEEE 802.24 TAG form a subgroup to write a proposed TG scope document for that application category (the current form is 24-14-0014-01). Approval for forming a subgroup is a majority vote. The IEEE 802.24 TAG Chair will inform the Sponsor of the formation of the group.
- When the subgroup has achieved consensus, the Chair of the subgroup will make a motion to approve the proposed TG scope document in the IEEE 802.24 TAG. Approval requires a 75% majority vote according to the IEEE 802 LMSC Policies and Procedures.
- The IEEE 802.24 TAG Chair submits the proposed TG scope document to all IEEE 802 WGs for review following the review and comment process in the “Plenary review” subclause of IEEE 802 LMSC Operations Manual. Note that a PAR is not being created.

New TG process (2)

- The 802.24 subgroup gets a motion in a minimum of 2 IEEE 802 WGs (not TAGs) that expresses support for adding this application category. The WGs that approve the motion may identify specific topics of that application category that are relevant to that WG.
- The 802.24 chair brings a motion to the EC to approve adding the area to IEEE 802.24.
- If the EC approves the formation of the TG, the TG may begin operation immediately.
- The IEEE 802.24 TAG may request that the EC rescind the scope of a TG, thereby dissolving the TG.

- **Interest continues to be high in the Study Group**
 - An average of 3 meeting slots assigned every F2F meeting
 - Average attendance per time slot is in the neighborhood of 70
- **Completed**
 - PAR and CSD approved by the Working Group in January 2015
 - The documents are now under review by 802 EC and NesCom
- **In Progress**
 - Discussions related to usage scenarios and channel modeling
 - Several submissions addressed specific technologies to enhance performance relative to previous IEEE 802.11ad-2012 amendment
- **Justification for SG Extension**
 - In case extra time is necessary to respond to comments from 802 EC and NesCom

Proposed response to China NB comment on 802.1AEbn-2011

- IEEE thanks the China NB for its comment on the 802.1AE/FDAmD 1 ballot.
- However, this amendment is based on IEEE 802.1AE, MAC Security, and not IEEE 802.1X, Port Based Network Access Control as asserted in the China NB's comment.
- The purpose for this amendment is to specify and support optional use of an additional cipher suite: AES-256 for MAC Security using GCM (Galois Counter Mode).

IEEE 802.3 Industry Connections NG-EPON report approval

Charter

The activity has been chartered to generate a report which will detail: (a) operators' requirements, (b) technological and economic tradeoffs of various approaches to next generation EPON, (c) the state of the art for optical subscriber access network technology, and (d) potential solutions that merit further consideration

Process

Developed in IEEE 802.3 Industry Connections NG-EPON ad hoc

Held 9 meetings, circulated 9 drafts for comment

Report approved by vote of IEEE 802.3 Working Group

Approval

Subclause 8.3.2 'Subgroup public statements' of the IEEE 802 LAN/MAN Standards Committee (LMSC) Policies and Procedures. As well as requiring the subgroup approval it also states that 'Such public statements also require approval of the Sponsor'.

Summary

- 802 views on “food for thought”
 - 1 (fees) - Existing process works fine (requesting a meeting fee waiver per meeting)
 - 2 (joint) – This should be based on the WG interest. But more importantly a success is needed before a general policy is considered.
 - 3 (resolution) – The current process of leadership interacting if there is an issue works fine, as there are not many issues. No objection to sharing links to new work items.
 - 5 (edu) – ITU is not participating in IEEE standards education...
- 802 has no specific comments on new process documents
 - Supportive of ITU collaboration/cooperation with IEEE 802 in a reciprocal manner based on mutual respect.
