

Introducing CFM in PBB

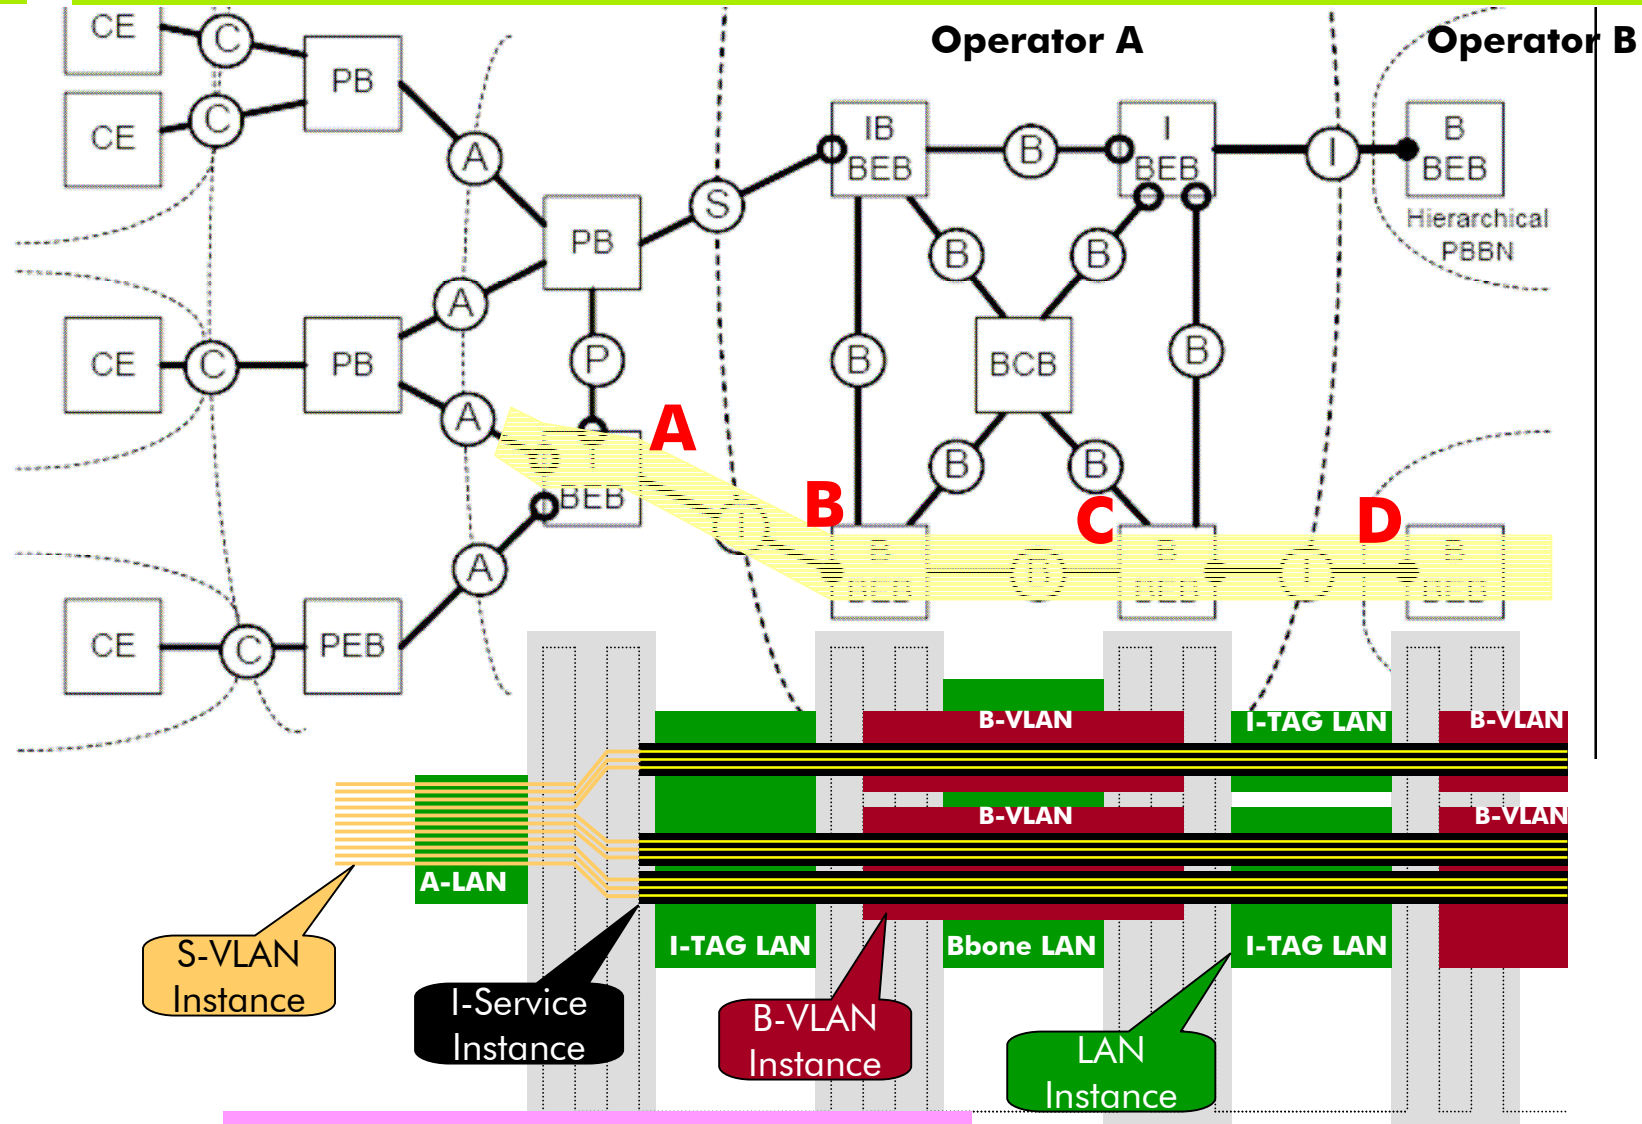

Maarten Vissers

CFM in Provider Backbone Bridge

- Draft 3.01 of 802.1ah does not specify CFM details
- Provider backbone networks expected to provide CFM
- Proposal to enhance 802.1ah with CFM specification
 - STEP 1: Identification of CFM entities in Peering and Hierarchical PBB Networks
 - STEP 2: Identification of CFM MEP and MIP locations
 - STEP 3: Locating MEP and MIP functions in PBB's I- and B-Components
 - STEP 4: Decompose PIP and CBP to prepare for CFM addition
 - STEP 5: Extending the CIP, PIP, CBP and PBP interface stacks with CFM shims
 - STEP 6: Reduced CFM in internal PIP/CBP in IB-BEB
- Proposal based on
 - ah-vissers-802.1-pb-pbb-models-1006-02
 - ah-vissers-802.1-impact-of-cfm-on-pbb-1106-01

Decompose shim 6.8/802.1ah

I-Component

Page 8

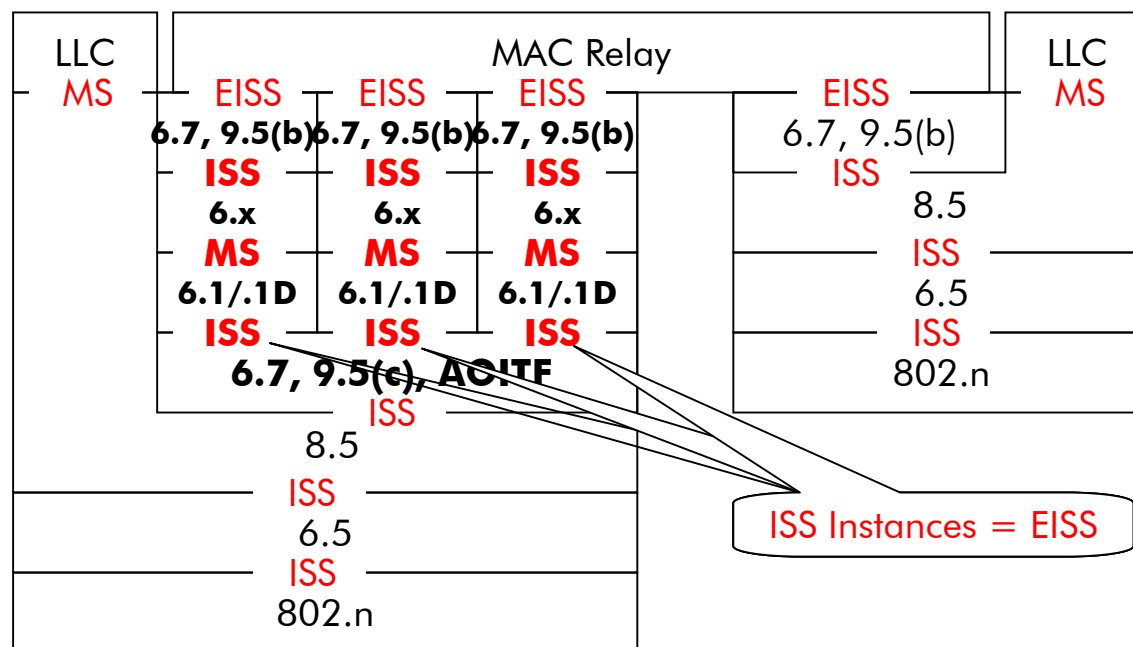

EISS Instances

Current specification in
802.1ah D3.01

- shim 6.8 decomposed into:
- Nx shim 6.7, 9.5(b)
 - Nx new shim 6.x "ISS⇔MS"
 - Nx shim 6.1/.1D
 - shim 6.7, 9.5(c) AOITF

note: ISSs may be supported by
6.10 shim (ISS within a system) or
by 6.11 shim (ISS by additional
technologies)

ISS Instances = EISS

Decompose shim 6.9/802.1ah
