

# **802.1Qau Frame Format Discussion and Link Aggregation**

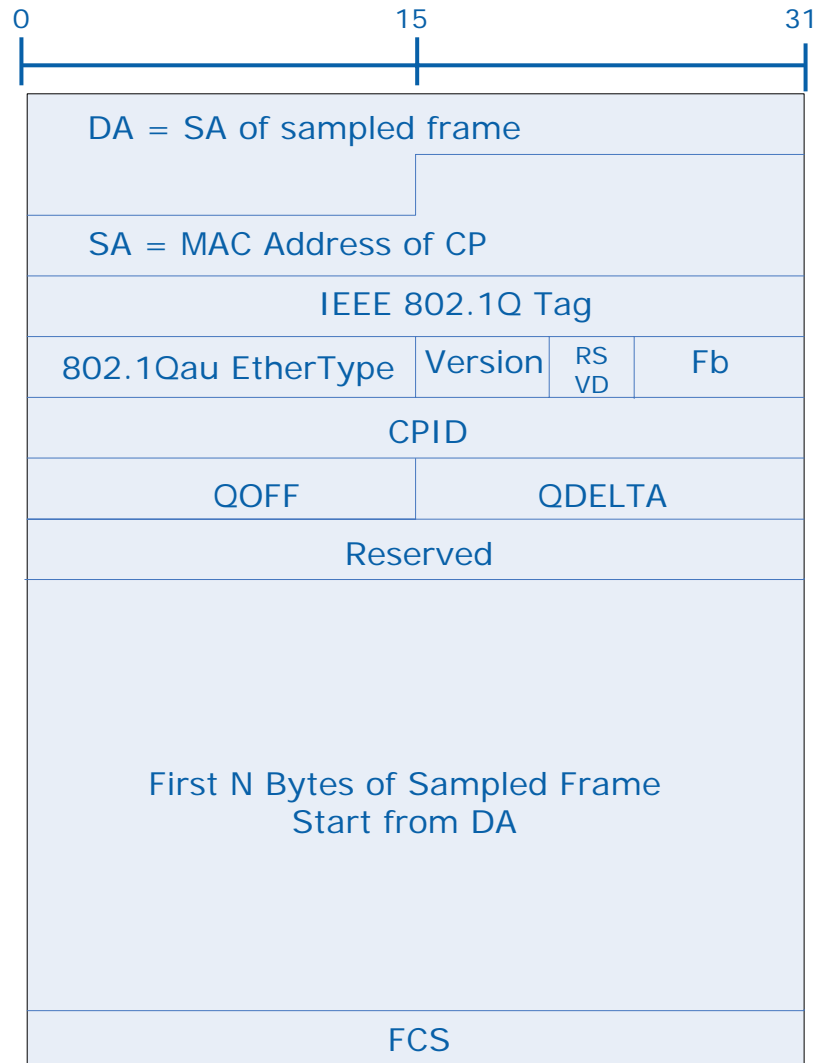

Manoj Wadekar

January 2008

# 802.1Qau Frames

- This is a starting point for discussion – not the end
- Control Packets: Congestion Notification
  - Generated by CP to RP
  - Based on Sampled Frame (to congested queue)
  - Carries fragment of culprit frame
  - Needs to go back to SA of culprit frame: Unicast packet
  - CN frame will carry special EtherType
  - Carries congestion feedback:
    - Fb
  - Discussion: Should CN carry following information:
    - Qoff, Qdelta and CPID

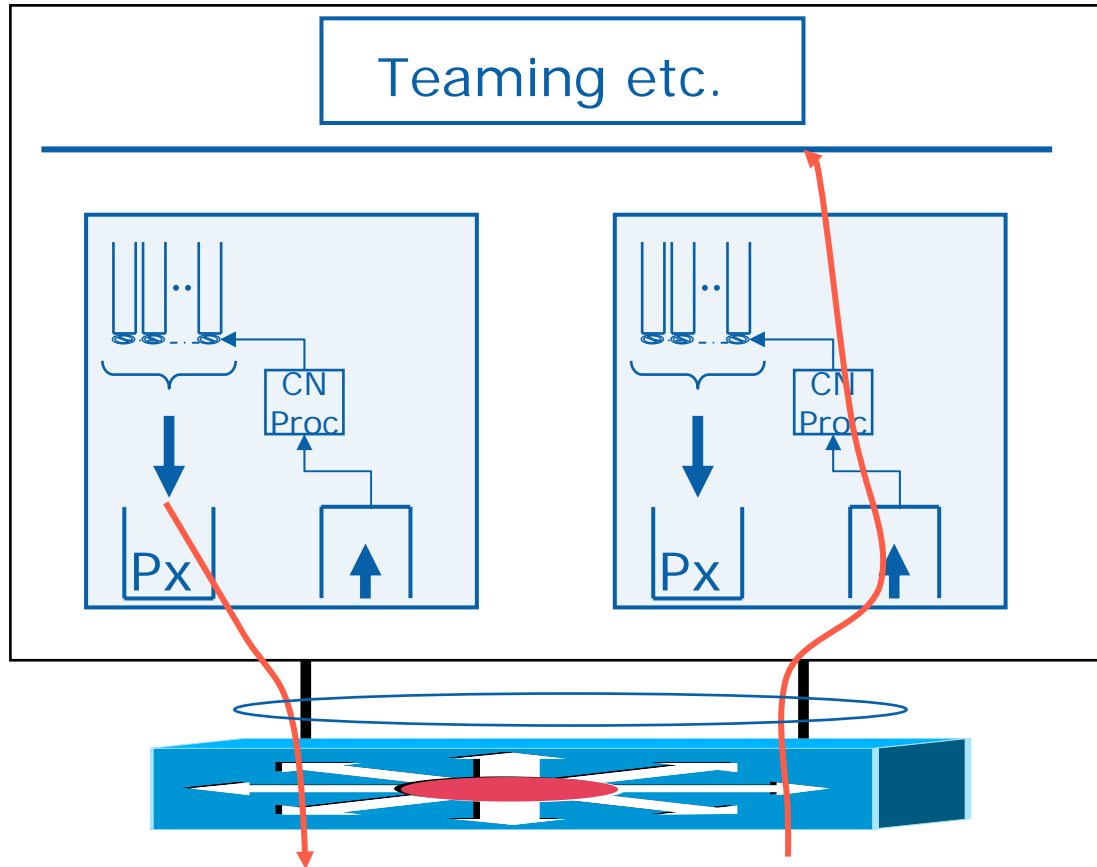

# CN Frame Format

N=28

# Discussion about link aggregation

- Stating the problem – not a solution: Something to think about
- How can one deliver CN to same port on which flow is being transmitted?
