Goals of Protocol

- **Discovery of DCB capability in a peer**
 - Mechanism to know if the peer device supports a particular feature such as Priority Groups (PG) or Priority-based Flow Control (PFC)
- **DCB feature misconfiguration detection**
 - Detect misconfiguration of a feature between the peers on a link
- **Peer configuration of DCB features**
 - Provide basic peer to peer configuration

DCBX Deployment Scenario

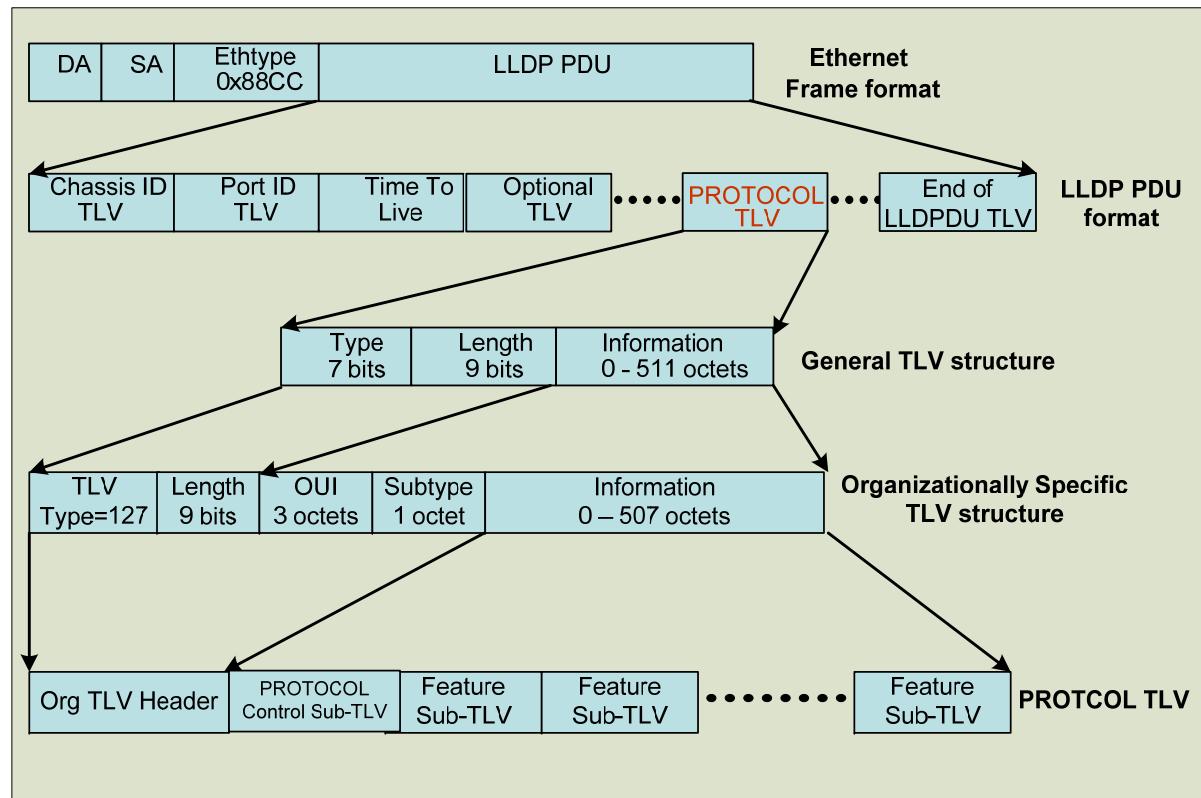

DCBX Exchange Overview

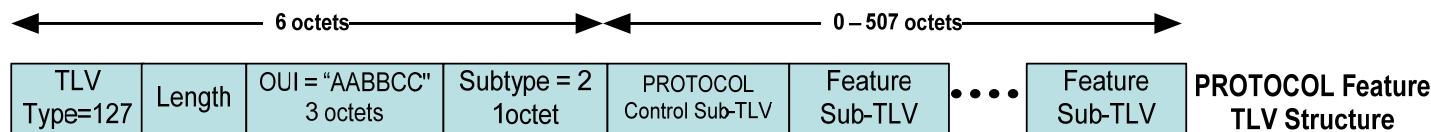

- **Exchanged parameters:** Exchanged parameters are sent to the peer
 - Administered parameters
 - Operational parameters
- **Local parameters:** Local parameters are not exchanged in LLDP messages

LLDP and DCBX

- **Uses LLDP for exchange information between link peers**
- **Adds control protocol above LLDP to ensure synchronization between peers for information**
 - Additional mechanism for reliability and synchronization
- **Defines protocol to (optionally) provide desired configuration to link peer**

DCBX Control and Protocol TLVs

DCBX Control TLV Definition

DCB Feature TLV

EN=Enabled

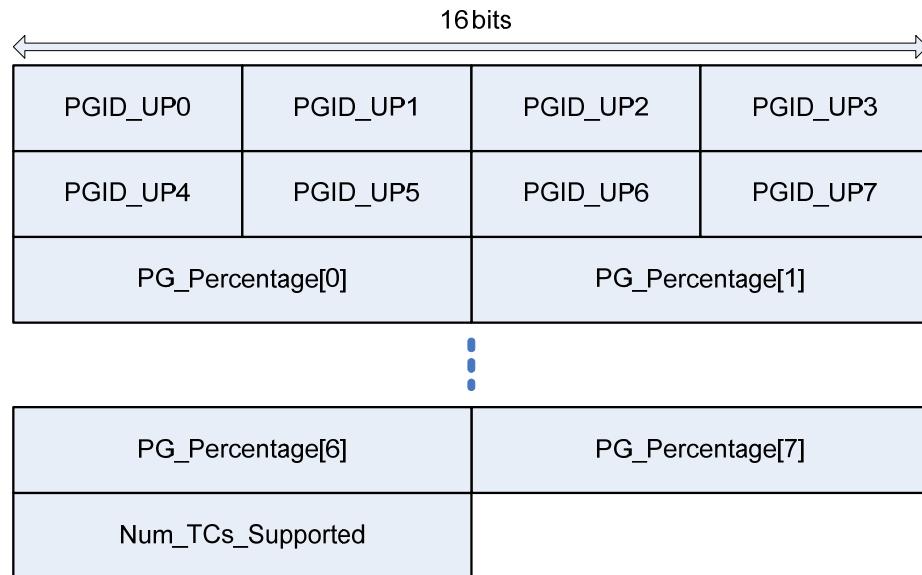

ER = Error

W=Willing

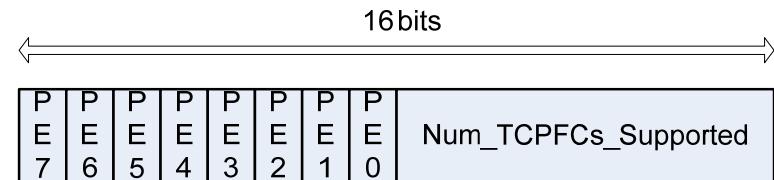

SIZE=6 Octets

- **Each feature carries its version number, subtype and configurability information**

DCBX : PG and PFC TLVs

Priority Group Parameters Structure

Priority-based Flow Control Parameters Structure

Details of proposal

- <http://www.ieee802.org/1/files/public/docs2008/laz-wadekar-dcbx-capability-exchange-discovery-protocol-0608-v1.0.pdf>
- Includes additional state machine and other details that are not covered in this presentation
- Comments/Questions/Suggestions are welcome

Thank You!
