5.1 Approximate number of people expected to be actively involved in the development of this project: 15

5.2 Scope: The scope of this standard is to specify provision of connectionless user data confidentiality, frame data integrity, and data origin authenticity by media access independent protocols and entities that operate transparently to MAC Clients.

5.3 Is the completion of this standard dependent upon the completion of another standard: No

5.4 Purpose: This standard will facilitate secure communication over publicly accessible LAN/MAN media for which security has not already been defined, and allow the use of IEEE Std 802.1X, already widespread and supported by multiple vendors, in additional applications.

5.5 Need for the Project: This revision project is needed to incorporate approved amendments IEEE Stds 802.1AEbn, 802.1AEbw, and 802.1AEcg. It will also resolve any maintenance items submitted on IEEE Std 802.1AE.

5.6 Stakeholders for the Standard: Developers and users of networking equipment.
