

P802.1AS-Rev Timing and Synchronization for Time-Sensitive Applications

Resolution of Comments on
Project Authorization Request (PAR) modification

2017-07-12

From 802.3

› Comment:

6.1.b (registration activity) — This should have been answered yes on the original PAR. (The base document includes use of registry terms (e.g., OUI, Ethertype, EUI-64, EUI-48 and also includes text suggesting using a mapping from EUI-48 to EUI-64 that is now deprecated because it potentially creates duplicate EUI-64 addresses.) As long as you are doing a PAR modification, please correct this oversight with an answer of yes with an 8.1 explanation, possibly indicating: “RAC review of previously reviewed text is appropriate to assure terminology and descriptions of usage are correct; as well as review of expected text changes related to existing descriptions of deprecated EUI-48 to EUI-64 mapping.”

› Response:

The answer to 6.1.b will be changed to Yes. The suggested text will be added as explanation.

From 802.11

› Comment:

1. PAR 8.1 should explain what changes are being made to the PAR. (See NesCom Conventions #13 – “Modified PARS”).

› Response:

Added to 8.1:

#5.2: “managed objects” has been added

#6.1.b: changed to “yes”, and explanation added
