Subject: Submissions for 60802 Joint Project Inclusion

Dear Mr. Parsons and Mr. Winkel:

The purpose of this liaison is to provide Avnu Alliance content for review and inclusion in the IEC/IEEE 60802 TSN Profile for Industrial Automation as the IEC/IEEE 60802 Joint Project sees fit.

The content consists of:

1. The Avnu Alliance™ “Best Practices Industrial Theory of Operations for TSN-enabled Systems”, Version 1.0. This document is a copyrighted document which is freely downloadable to anyone via the following link, however, they are required to provide a name and email address.

<http://avnu.org/theory-of-operation-for-tsn-enabled-industrial-systems/>

This document may be placed in the IEEE private website accessible with user password. I include a copy of the document with this letter for your convenience. A “Copyright Permission Form” is also being submitted for this document.

2. A derivative presentation from the Avnu “Marketing Requirements Document for Industrial Bridged and non-Bridged End Stations” draft version 0.017. This presentation is entitled “Bridged and non-Bridged End Stations.pdf” and will be uploaded separately. This presentation may be posted on the IEEE public website.

We are pleased to share this information with the IEC/IEEE 60802 Joint Project and any feedback is most welcome as well.

Respectfully submitted,

Kevin B. Stanton, Ph.D.
Avnu Alliance Chairman
