# Aggregation – Deaggregation Datapath

Picture from Rich Dubrawski

# Notes

- Discussed the Datapath aggregation
  - Single Traffic All PCP to one Traffic class
    - Fragmented and non-fragmented
    - Pull by strict priority
    - On egress original PCP comes from the original encapsulated frame
  - Two traffic classes
    - Pull by strict priority but cannot add frames from lower or higher Traffic class to the same aggregated frame (MPPDU)
  - Undecided if two or four traffic classes is required.
