Q14/15 appreciates the coordination and support of IEEE 802.1 in the development of interoperable Ethernet OAM Management Systems. Modelling related to time synchronization and the ITU-T Q14/15 development of a telecom profile of PTP based on IETF RFC8575 would benefit from discussion with IEEE 1588. ITU-T Q14/15 will continue to host coordination virtual meetings on the following dates. Modelling experts of the receiving SDOs of this liaison statements are invited to join.

Logistics details:
