1.2.4 Technical Feasibility

To make clear that ‘x’ in the text below means multiplication, we suggest using the multiplication sign from the MS Word symbol template (i.e. ‘×’). If the ‘x’ does not mean multiplication, then further clarification is needed.

“Supporting bandwidths from 20-160 MHz and with 1 to 4 transmit and receive streams, these devices demonstrate a computation complexity similar to that expected from a 320 MHz waveform with an equivalent number of spatial **streams x bandwidth** waveforms.”
