Responses.

Draft P802.1DC Comments from 802.11

802.1DC - Standard - Quality of Service Provision by Network Systems, PAR Extension

- **PAR – Number of years seems to be a bit long at 3 years to fix up references.**
- **The Description may need to expand on explaining why 3 years is needed and remember the audience of the paragraph is not the 802.1 group that understands the underlying reasons.**
- **The Document is already at 70%, so please explain what the scope of the changes are that require 3 years.**
- **Given your RevCom target of July 2023, 1 year would be enough, but you could nominally ask for 2 years to buffer.**

Response

- Times are uncertain. We estimate that 70% of the document is finished, but balloting may reveal otherwise. We do not want to return for another PAR extension. There is no penalty for overestimating the time required to finish the document. We ask for a 3-year extension.
