5.1 Approximate number of people expected to be actively involved in the development of this project: 10

5.2.a Scope of the complete standard:The scope of this standard is to define the Media Access Control (MAC) Service provided by all IEEE 802(R) MACs, and the Internal Sublayer Service (ISS) provided within MAC Bridges, in abstract terms of the following: a) Their semantics, primitive actions, and events; and b) The parameters of, interrelationship between, and valid sequences of these actions and events.

5.2.b Scope of the project: This project adds support of the Internal Sublayer Service by the IEEE Std 802.15.6 MAC entity. This amendment also makes technical and editorial corrections in the description of existing IEEE Std 802.1AC functionality.

5.3 Is the completion of this standard contingent upon the completion of another standard? No

5.4 Purpose: This document will not include a purpose clause.

5.5 Need for the Project: Support of 48-bit MAC addressing in IEEE Std 802.15.6-2012 allows the use of MAC bridging in 802.15.6 networks.

5.6 Stakeholders for the Standard: Developers, providers, and users of networking services and equipment for data centers and portable device vendors. This includes software developers, networking integrated circuit
