Observations

- The technical comments largely relate to proxies or time sync. These comments do not concern technical approach, but clarification of the current approach.
- Many of the remaining editorial comments are technically out of scope; however, due to the complex nature of the Joint Project, the editor would prefer to correct them now rather than during the editorial process.
- There is an additional discussion topic raised by TIACC regarding the specification of scheduled traffic and preemption. It is the editor's position that any change to this language is out of scope.

Thank you
