Re:	Recirculation of Working Group Review of Working Document 80216h-06_015r1	
Abstract	MATI and SATI availability detection and selection can follow similar processes as the ones proposed for CMI detection and selection. With respect to this, this contribution proposes some MATI and SATAI availability detection and selection procedures. This contribution is related to the comments #181 provided in the review [2] corresponding to the IEEE 802.16 Working Group Letter Ballot #24. The proposed text is intended to be included in a new subclause "15.4.2.5.7: MATI and SATI availability detection and selection" of the draft [1].	
Purpose	Propose contribution on MATI/SATI availability detection and selection	
Notice	This document has been prepared to assist IEEE 802.16. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.	
Release	The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE's name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE's sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802.16.	
Patent Policy and Procedures	The contributor is familiar with the IEEE 802.16 Patent Policy and Procedures < http://ieee802.org/16/ipr/patents/policy.html >, including the statement "IEEE standards may include the known use of patent(s), including patent applications, provided the IEEE receives assurance from the patent holder or applicant with respect to patents essential for compliance with both mandatory and optional portions of the standard." Early disclosure to the Working Group of patent information that might be relevant to the standard is essential to reduce the possibility for delays in the development process and increase the likelihood that the draft publication will be approved for publication. Please notify the Chair < mailto:chair@wirelessman.org > as early as possible, in written or electronic form, if patented technology (or technology under patent application) might be incorporated into a draft standard being developed within the IEEE 802.16 Working Group. The Chair will disclose this notification via the IEEE 802.16 web site < http://ieee802.org/16/ipr/patents/notices >.	

MATI/SATI Availability Detection and Selection

David Grandblaise

Motorola

Overview

MATI and SATI availability detection and selection can follow similar processes as the ones proposed for CMI detection and selection. With respect to this, this contribution proposes some MATI and SATAI availability detection and selection procedures. This contribution is related to the comments #181 provided in the review [2] corresponding to the IEEE 802.16 Working Group Letter Ballot #24. The proposed text is intended to be included in a new subclause "15.4.2.5.7: MATI and SATI availability detection and selection" of the draft [1].

Specific editorial changes

This section provides a list of changes to the draft document.

Blue text represents specific editorial additions.

~~Red strikethrough~~ text is to be deleted.

Black text is text already in the draft.

Bold italic text is editorial instructions to the editor.

Text proposal for section 15.4.2.5.7

Create the new subclause "15.4.2.5.7: MATI and SATI availability detection and selection"

TBD
