## Venue:

IEEE 802.16 New Delhi meeting

## Purpose:

For discussion at 802.16i New Delhi meeting

## Notice:

This document has been prepared to assist IEEE 802.16. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.

## Release:

The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE's name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE's sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802.16.

## IEEE 802.16 Patent Policy:

The contributor is familiar with the IEEE 802.16 Patent Policy and Procedures <<http://ieee802.org/16/ipr/patents/policy.html>>, including the statement "IEEE standards may include the known use of patent(s), including patent applications, provided the IEEE receives assurance from the patent holder or applicant with respect to patents essential for compliance with both mandatory and optional portions of the standard." Early disclosure to the Working Group of patent information that might be relevant to the standard is essential to reduce the possibility for delays in the development process and increase the likelihood that the draft publication will be approved for publication. Please notify the Chair <<mailto:chair@wirelessman.org>> as early as possible, in written or electronic form, if patented technology (or technology under patent application) might be incorporated into a draft standard being developed within the IEEE 802.16 Working Group. The Chair will disclose this notification via the IEEE 802.16 web site <<http://ieee802.org/16/ipr/patents/notices>>.

# **Mobile MIB development proposal**

Joey Chou, Intel

Xu Ling, ZTE

Zou Lan, Huawei

Jörg Schmidt, Motorola

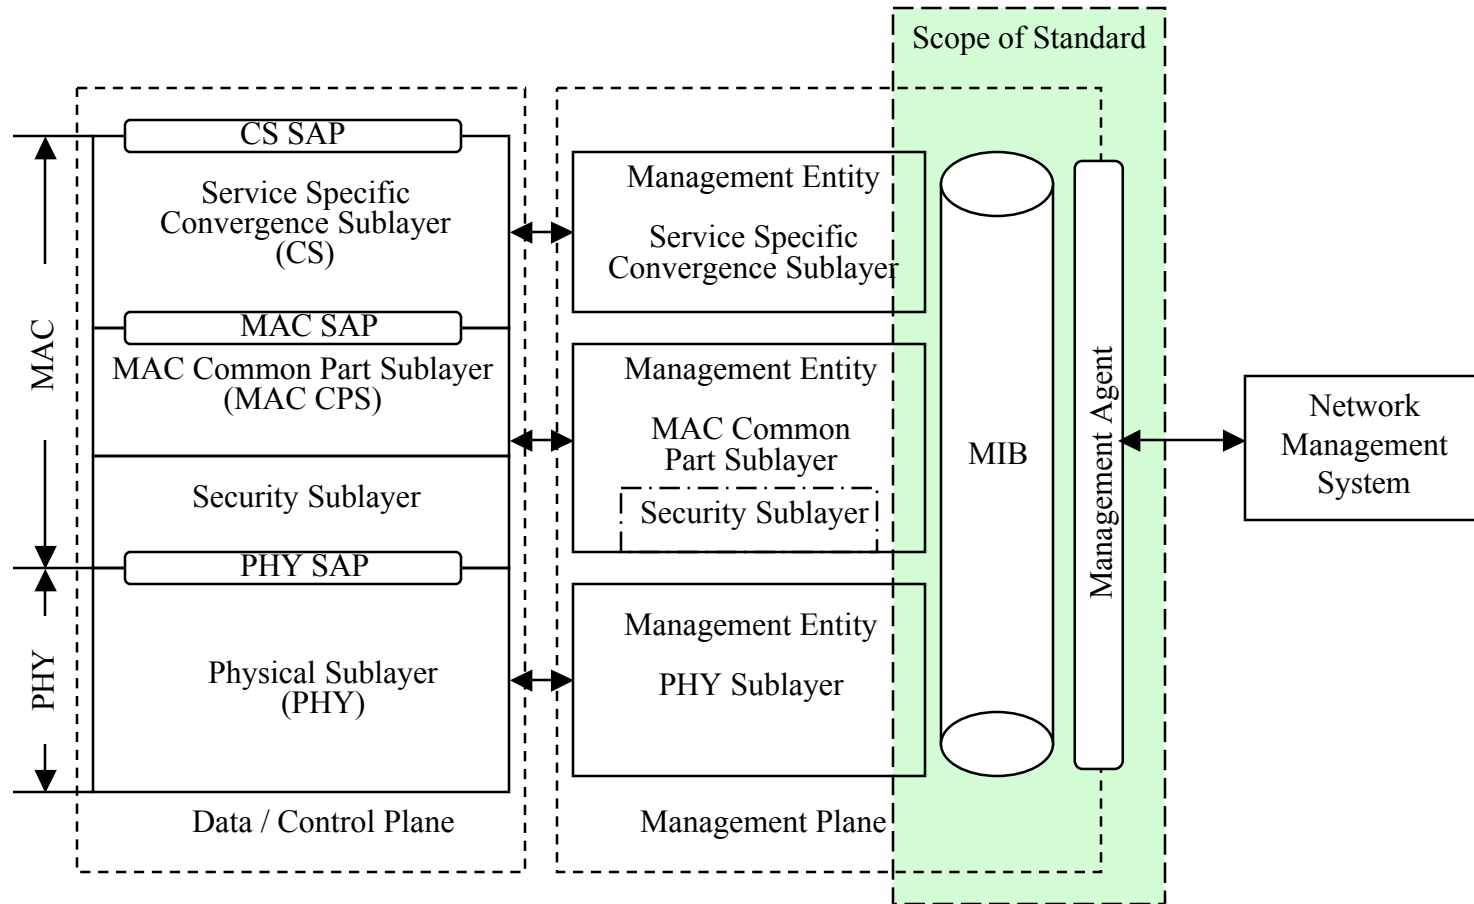

# Outline

- 802.16i PAR
- 802.16i Reference model & NM Architectures
- IRP Methodology for Management Interfaces
- 802.16i TOC
- 802.16i Tasks

# 802.16i PAR

- **SCOPE:** This document provides updates to IEEE Std 802.16's MIB for the MAC, PHY and associated management procedures in order to accommodate recent extensions to the standard. The project will use protocol-neutral methodologies for network management to develop resource models and related solution sets for the management of devices in a multi-vendor 802.16 network.
- **PURPOSE:** The purpose of this project is to provide a definition of managed objects to enable the standards-based management of 802.16 devices.
- **REASON:** The reason for this project is to facilitate cross-vendor interoperability at the network level for the management of 802.16 devices and networks. This will provide network operators with the ability to manage multivendor networks including 802.16 devices. This project extends upon the work of IEEE 802.16f in adding MIB support for new features and functions added in IEEE 802.16e and other projects.

# 802.16i Reference Model

# Types of Network Management Interfaces

# NM Architecture Model for 802.16 (1/2)

# NM Architecture Model for 802.16 (2/2)

# IRP Methodology

1. Interface IRPs – These typically provide the definitions for IRP operations and notifications in a network agnostic manner. These enable independent development as well as reusable across the industry
2. NRM IRPs – providing the definitions for the Network Resources to be managed (commonly named "Network Resources IRPs"). These enable technology & vendor specific NRM extensions
3. Data Definition IRPs – provide data definitions applicable to specific management aspects to be managed via reusing available Interface IRPs and application to NRM IRPs as applicable. These enable a wide applicability, phased introduction capabilities & broad industry adoption.

# TOC

## **1. Overview**

### **1.1 SCOPE**

### **1.2 Purposes**

### **1.3 Reference models**

## **9. Configuration**

## **13. 802.16 MIB Structure for SNMP**

## **15. IRP Definitions for Mobile 802.16**

### **15.1: 802.16 NRM IRP IS**

### **15.2: 802.16 NRM IRP SNMP Solution Set**

### **15.3: 802.16 NRM IRP CORBA Solution Set**

### **15.4: 802.16 NRM IRP XML Solution Set**

### **15.5: Interface IRP Considerations**

# 802.16i Tasks

- **Definitions/conclusions on Protocol-neutral 802.16 Mobile Network Resource Model IRP (IS)**
  - Focus on enabling management of 802.16e,
  - using 3GPP IRP methodology
  - IS is defining the semantics/behavior, not the protocol syntax
  - reuse 802.16f as applicable, and enhance as required to support based on 802.16e
  - Retain the naming convention of wmanIfMib if possible (and if not in conflict with IRP naming conventions)
  - As feasible and applicable, 802.16f wmanIfMib tables may be used to define IRP IOC's
- **Definitions/conclusions on Solution Sets (SS) for 802.16 Mobile Network Resource Model IRP (mapping of IS into SS)**
  - **SNMP Solution Set**
    - Define where the wmanIfMib will reside in the MIB subtree
      - MIB II subtree – new IANAtype?
      - IEEE subtree – iso(1) std(0) iso8802(8802)
  - **CORBA Solution Set**
  - **XML Solution Set**
  - SS's are defining the protocol syntax, not semantics/behavior
- **Documenting guidelines on reuse of 3GPP/3GPP2 Interface IRP's**
