1. Introduction

As illustrated in Figure 1, the new mobile multi-hop relay-based (MMR) network architecture imposes a demanding performance requirement on relay links, whereupon traffic collected from and distributed to multiple MSs are aggregated. Therefore, it is imperative to improve the capacity of relay links to support this inherent notion of “traffic aggregation”.

Figure 1: An illustration of performance demand on relay links in an MMR network.

Hereby, we propose to expand the HARQ channel ID (ACID) field in an adaptive manner for HARQ operation on relay links, thus helping eliminate throughput performance bottleneck.

2. Summary of Proposal

In the IEEE 802.16e standard [1], ACID is used to identify multiple HARQ channels that can operate in parallel. Current ACID field is four-bit long, implying that the maximum number of parallel HARQ channels is 16. This unfortunately prevents the total link capacity to be fully unleashed.

For example, Figure 2 depicts the performance of an 802.16e network, wherein MAC ARQ and HARQ are deployed in conjunction to provide reliable data transfer. Apparently, the throughput achieved on the relay link becomes significantly lower than the actual MAC layer capacity, as the length of ACID field decreases. A

closer examination reveals that the primary culprit of this performance degradation is the limited number of parallel HARQ channels supported at the physical layer. The major simulation parameters are shown in Table 1.

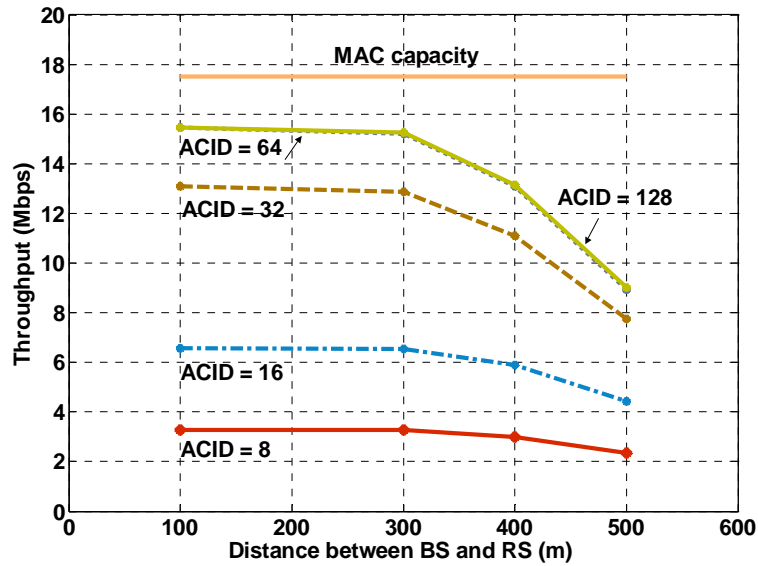

Figure 2: Performance degradation caused by limited ACID size.

HARQ Mode	Maximum HARQ retransmission	Number of ACID	Fragmentation at HARQ layer
IR	3	16	Disabled
Coding	AMC	Frame duration	PDU SN Extended SH
CTC 1/3	64 QAM	5 ms	Not used

Table 1: Key PHY and MAC parameters.

To address the aforementioned problem, we propose to expand the ACID field in an adaptive manner. More specifically,

- The ACID field is extended to 8 bits in the related MAC message.
- The actual number of parallel HARQ channels to be used is adaptively selected during the network entry/re-entry process, subject to the constraint of the given capability of the BS and RS devices.

3. Proposed Text Changes

8. PHY

8.4.5.3.21 HARQ DL MAP IE

Change the Table 286m as follows:

Table 286m – DL HARQ Chase sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
}		
<u>ACID</u>	<u>8 bits</u>	<u>The ACID field is extended to 8 bits</u>
AI SN	1 bit	
ACK disable	1 bit	
Dedicated DL Control Indicator	2 bits	
<u>Reserved</u>	<u>4 bits</u>	
...		

Change the Table 286n as follows:

Table 286n – DL HARQ IR CTC sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
SPID	2 bits	
<u>ACID</u>	<u>8 bits</u>	<u>The ACID field is extended to 8 bits</u>
AI SN	1 bit	
ACK disable	1 bit	
<u>Reserved</u>	<u>6 bits</u>	
...		

Change the Table 286o as follows:

Table 286o – DL HARQ IR CC sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
}		
<u>ACID</u>	<u>8 bits</u>	<u>The ACID field is extended to 8 bits</u>
AI SN	1 bit	
SPID	2 bits	
ACK disable	1 bit	
Dedicated DL Control Indicator	2 bits	
<u>Reserved</u>	<u>6 bits</u>	
...		

Change the Table 286p as follows:

Table 286p – MIMO DL Chase HARQ sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
<i>If (ACK Disable == 0) {</i>		
<u><i>ACID</i></u>	<u><i>8 bits</i></u>	<u><i>The ACID field is extended to 8 bits</i></u>
<i>AI SN</i>	<i>1 bit</i>	
<u><i>Reserved</i></u>	<u><i>4 bits</i></u>	
<i>}</i>		
...		

Change the Table 286q as follows:

Table 286q – MIMO DL IR HARQ sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
<i>SPID</i>	<i>2 bits</i>	
<u><i>ACID</i></u>	<u><i>8 bits</i></u>	<u><i>The ACID field is extended to 8 bits</i></u>
<i>AI SN</i>	<i>1 bit</i>	
<u><i>Reserved</i></u>	<u><i>4 bits</i></u>	
<i>}</i>		
...		

Change the Table 286r as follows:

Table 286r – MIMO DL IR HARQ for CC sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
<i>If (ACK disable == 0) {</i>		
<u><i>ACID</i></u>	<u><i>8 bits</i></u>	<u><i>The ACID field is extended to 8 bits</i></u>
<i>AI SN</i>	<i>1 bit</i>	
<i>SPID</i>	<i>2 bits</i>	
<u><i>Reserved</i></u>	<u><i>4 bits</i></u>	
<i>}</i>		
...		

Change the Table 286s as follows:

Table 286s – MIMO DL STC HARQ sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		

<i>If (ACK disable == 0) {</i>		
<u><i>ACID</i></u>	<u><i>8 bits</i></u>	<u><i>The ACID field is extended to 8 bits</i></u>
<u><i>Reserved</i></u>	<u><i>4 bits</i></u>	
<i>}</i>		
...		

8.4.5.4.24 HARQ UL MAP IE

Change the Table 302k as follows:

Table 302k – UL HARQ Chase sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
<i>Duration</i>	<i>10 bits</i>	
<u><i>ACID</i></u>	<u><i>8 bits</i></u>	<u><i>The ACID field is extended to 8 bits</i></u>
<i>AI SN</i>	<i>1 bit</i>	
<i>ACK disable</i>	<i>1 bit</i>	
<u><i>Reserved</i></u>	<u><i>5 bits</i></u>	
<i>}</i>		

Change the Table 302I as follows:

Table 302I – UL HARQ IR CTC sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
<i>SPID</i>	<i>2 bits</i>	
<u><i>ACID</i></u>	<u><i>8 bits</i></u>	<u><i>The ACID field is extended to 8 bits</i></u>
<i>AI SN</i>	<i>1 bit</i>	
<i>ACK disable</i>	<i>1 bit</i>	
<u><i>Reserved</i></u>	<u><i>7 bits</i></u>	
<i>}</i>		

Change the Table 302m as follows:

Table 302m – UL HARQ IR CC sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
<i>SPID</i>	<i>2 bits</i>	
<u><i>ACID</i></u>	<u><i>8 bits</i></u>	<u><i>The ACID field is extended to 8 bits</i></u>
<i>AI SN</i>	<i>1 bit</i>	

<i>ACK disable</i>	<i>1 bit</i>	
<u><i>Reserved</i></u>	<u><i>7 bits</i></u>	
}		

Change the Table 302n as follows:

Table 302n – MIMO UL Chase HARQ sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
<i>If (ACK disable == 0) {</i>		
<u><i>ACID</i></u>	<u><i>8 bits</i></u>	<u><i>The ACID field is extended to 8 bits</i></u>
<i>AI SN</i>	<i>1 bit</i>	
<u><i>Reserved</i></u>	<u><i>4 bits</i></u>	
}		
...		

Change the Table 302o as follows:

Table 302o – MIMO UL IR HARQ sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
<i>If (ACK disable == 0) {</i>		
<i>SPID</i>	<i>2 bits</i>	
<u><i>ACID</i></u>	<u><i>8 bits</i></u>	<u><i>The ACID field is extended to 8 bits</i></u>
<i>AI SN</i>	<i>1 bit</i>	
<u><i>Reserved</i></u>	<u><i>4 bits</i></u>	
}		
...		

Change the Table 302p as follows:

Table 302p – MIMO UL IR HARQ for CC sub-burst IE format

<i>Syntax</i>	<i>Size</i>	<i>Notes</i>
...		
<i>If (ACK disable == 0) {</i>		
<u><i>ACID</i></u>	<u><i>8 bits</i></u>	<u><i>The ACID field is extended to 8 bits</i></u>
<i>AI SN</i>	<i>1 bit</i>	
<i>SPID</i>	<i>2 bits</i>	
<u><i>Reserved</i></u>	<u><i>4 bits</i></u>	
}		

...		
-----	--	--

Change the Table 302q as follows:

Table 302q – MIMO UL STC HARQ sub-burst IE format

Syntax	Size	Notes
...		
<i>If (ACK disable == 0) {</i>		
<u>ACID</u>	<u>8 bits</u>	<u>The ACID field is extended to 8 bits</u>
<u>Reserved</u>	<u>4 bits</u>	
<i>}</i>		
...		

11 TLV Encodings

11.8.3.7.2 OFDMA SS demodulator

Change the description in this subclause as follows:

This field specifies the number of downlink H-ARQ channels (n) the SS supports, where $n = \underline{1..255}$. The value of the TLV shall be set to \underline{n} . *When the length of the TLV is 1 byte, it indicates that bits 8–15 are zero.*

11.8.3.7.3 OFDMA SS modulator

Change the description in this subclause as follows:

This field specifies the number of uplink H-ARQ channels (n) the SS supports, where $n = \underline{1..255}$. The value of the TLV shall be set to \underline{n} .

11.13.32 HARQ Service Flows

Change the description in this subclause as follows:

Type	Length	Value	Scope
[145/146].44	1	0 = Non HARQ (default) <u>1 = HARQ Connection,</u> <u>Support 1 HARQ channel</u> <u>2 = HARQ Connection,</u> <u>Support 2 HARQ channels</u>	DSA-REQ, DSA-RSP, REG-REQ, REG-RSP

		<u>...</u> <u>255 = HARQ Connection,</u> <u>Support 256 HARQ channels</u>	
--	--	---	--

The HARQ Service Flows TLV not only indicates whether the connection uses HARQ or not, but also conveys the number of HARQ channels that the HARQ transmitter desires to use.
