Re:	1802.16.2-03/01 Call for comments and contributions regarding C1802.16.2-03/01r1.	
Abstract	Edited Structure Section to be more in line with rest of document.	
Purpose	Replace current section 6.5.7	
Notice	This document has been prepared to assist IEEE 802.16. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.	
Release	The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE's name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE's sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802.16.	
Patent Policy and Procedures	The contributor is familiar with the IEEE 802.16 Patent Policy and Procedures < http://ieee802.org/16/ipr/patents/policy.html >, including the statement "IEEE standards may include the known use of patent(s), including patent applications, provided the IEEE receives assurance from the patent holder or applicant with respect to patents essential for compliance with both mandatory and optional portions of the standard." Early disclosure to the Working Group of patent information that might be relevant to the standard is essential to reduce the possibility for delays in the development process and increase the likelihood that the draft publication will be approved for publication. Please notify the Chair < mailto:chair@wirelessman.org > as early as possible, in written or electronic form, if patented technology (or technology under patent application) might be incorporated into a draft standard being developed within the IEEE 802.16 Working Group. The Chair will disclose this notification via the IEEE 802.16 web site < http://ieee802.org/16/ipr/patents/notices >.	

Replacement TSS&TP Section 6.5.7

0.0.1 Clock Comparison - BS

0.0.1.1 Capabilities

Table 1 Clock Comparison - **Capabilities**

TP/BS/CCC/CCC/CA-000	<p>Reference: Initial condition: Base station is operational. Stimulus: At a minimum, before the first UGS connection is established, but may be performed earlier. Expected behavior: BS transmits, every 50 ms, a CLK-CMP message on the Broadcast connection.</p>
TP/BS/CCC/CCC/CA-001	<p>Reference: Initial condition: BS has initiated UGS connection and is transmitting CLK-CMP messages. BS is using different sources for symbol and network clock. Stimulus: Vary the network clock. Expected behavior: The values in the CLK-CMP message should change accordingly.</p>

0.0.1.2 Valid Behavior

There are no BV category tests for Clock Comparison at the BS.

0.0.1.3 Invalid Behavior

There are no BI category tests for Clock Comparison at the BS.

0.0.1.4 Inopportune Behavior

There are no BO category tests for Clock Comparison at the BS.

0.0.1.5 Timer

There are no TI category tests for Clock Comparison at the BS.

0.0.1.6 Message Formats

For all TP/BS/CCC/CCC tests ensure that messages transmitted by the BS contain the correct parameters in the correct order.
