Re:	Recirculation Ballot #14b Announcement	
Abstract	To be in line with CID_update in REG-RSP in current IEEE 802.16e/D3, SAID_update is defined and appended to the RNG-RSP.	
Purpose	Discuss and Adopt	
Notice	This document has been prepared to assist IEEE 802.16. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.	
Release	The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE's name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE's sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802.16.	
Patent Policy and Procedures	The contributor is familiar with the IEEE 802.16 Patent Policy and Procedures < <a href="http://ieee802.org/16/ipr/patents/policy.html">http://ieee802.org/16/ipr/patents/policy.html</a> >, including the statement "IEEE standards may include the known use of patent(s), including patent applications, provided the IEEE receives assurance from the patent holder or applicant with respect to patents essential for compliance with both mandatory and optional portions of the standard." Early disclosure to the Working Group of patent information that might be relevant to the standard is essential to reduce the possibility for delays in the development process and increase the likelihood that the draft publication will be approved for publication. Please notify the Chair < <a href="mailto:chair@wirelessman.org">mailto:chair@wirelessman.org</a> > as early as possible, in written or electronic form, if patented technology (or technology under patent application) might be incorporated into a draft standard being developed within the IEEE 802.16 Working Group. The Chair will disclose this notification via the IEEE 802.16 web site < <a href="http://ieee802.org/16/ipr/patents/notices">http://ieee802.org/16/ipr/patents/notices</a> >.

## Addition of SAID\_update

*Dongkie Lee, DongRyul Lee, Dongll Moon, JongKuk Ahn  
SK Telecom*

### 1. Problem Statements

IEEE 802.16e/D3 defined CID\_update attribute which is used as shorthand method for replacing the active connections used by the MSS in its previous Serving BS. But with same analogy, it's possible that SA be reused therefore SAID should be updated according to the Target BS security policy configuration.

### 2. Overview of Proposed Solutions

Per the handoff ad-hoc's consensus, when bit 1 of Handoff Process Optimization is set to 1, which means PKM procedure maybe skipped, it's probable that SAID be updated according to the target BS security configuration. In this case, SAID\_update attribute shall be appended to RNG-RSP as CID\_update is appended to REG-RSP. But if the crypto-graphic suite negotiated between MSS and serving BS is not supported by target BS, PKM procedure shall not be skipped without doubt.

### 3. Proposed Changes to IEEE 802.16e/

#### 6.3.2.3.6 Ranging Response(RNG-RSP) message

**Service Level Prediction** — This value indicates the level of service the MSS can expect from this BS. The following encodings apply:

- 0 = No service possible for this MSS.
- 1 = Some service is available for one or several Service Flow authorized for the MSS.
- 2 = For each authorized Service Flow, a MAC connection can be established with QoS specified by the AuthorizedQoSParamSet.
- 3 = No service level prediction available.

Service Level prediction may be accompanied by a number of Service Flow Encodings as specified in 11.13 sufficient to uniquely identify the AuthorizedQoSParamSet associated with the predicting Service Level Prediction (SLP). If Service Flow Encodings are included, then the SLP response is specific to the presented AuthorizedQoSParamSet defined by the associated encodings. Included Service Flow Encodings are restricted to the following parameters only:

- Global Service Class Name
- Service Flow QoS parameter set encodings as defined in 11.13 such that the combination of Global Service Class Name and any Service Flow modifying parameters fully defines an AuthorizedQoSParamSet profile being assessed
- Service Flow Identifier

If individual AuthorizedQoSParamSet profiles are provided for multiple Service Level Predictions, then each Service Level Prediction is specific to its associated AuthorizedQoSParamSet profile and shall include only response options '0' or '2'.

[SAID\\_update - The SAID\\_update is a compound TLV value that provides a shorthand method for renewing](#)

active SAs used by the MSS in its previous Serving BS. The TLVs specify SAID in the Target BS that shall replace active SAID used in the previous Serving BS. Multiple iterations of these TLVs may occur in the RNG-RSP suitable to re-creating and re-assigning all active Security Associations for the MSS from its previous Serving BS including Primary, Dynamic and Static SAIDs. If any of the Security Associations parameters change, then those Security Associations parameters encoding TLVs that have changed will be added.

## 11.6 RNG-REQ/RSP TLVs for re-establishment of Service Flows

[Add the following before section 11.7]

### 11.6.1 SAID update encodings

This field provides a translation table that allows an MSS to update its security associations so that it may continue security service after a hand-over to a new serving BS.

Name	Type (1 byte)	Length (1 byte)	Value (Variable length)
SAID_update	20	variable	Compound

The following TLV values shall appear in each SAID\_update TLV.

Name	Type (1 byte)	Length (1 byte)	Value (Variable length)
New_SAID	20.1	2	New SAID after hand-over to new BS
Old_SAID	20.2	2	Old SAID before hand-over from Old BS
