Re:	Response to Chair request for action to create proper Editorial instructions for Table 55a to resolve issue with Technical Binding comment #280 in comment database IEEE 802.16-04/69r1, at Session 34	
Abstract	Table 55a Editorial Instructions	
Purpose	Provide proper Editorial instructions for Table 55a in IEEE P802.16e/D5 to resolve issue with Technical Binding comment #280 in comment database IEEE 802.16-04/69r1, at Session 34	
Notice	This document has been prepared to assist IEEE 802.16. It is offered as a basis for discussion and is not binding on the contributing individual(s) or organization(s). The material in this document is subject to change in form and content after further study. The contributor(s) reserve(s) the right to add, amend or withdraw material contained herein.	
Release	The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE's name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE's sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802.16.	
Patent Policy and Procedures	The contributor is familiar with the IEEE 802.16 Patent Policy and Procedures < http://ieee802.org/16/ipr/patents/policy.html >, including the statement "IEEE standards may include the known use of patent(s), including patent applications, provided the IEEE receives assurance from the patent holder or applicant with respect to patents essential for compliance with both mandatory and optional portions of the standard." Early disclosure to the Working Group of patent information that might be relevant to the standard is essential to reduce the possibility for delays in the development process and increase the likelihood that the draft publication will be approved for publication. Please notify the Chair < mailto:chair@wirelessman.org > as early as possible, in written or electronic form, if patented technology (or technology under patent application) might be incorporated into a draft standard being developed within the IEEE 802.16 Working Group. The Chair will disclose this notification via the IEEE 802.16 web site < http://ieee802.org/16/ipr/patents/notices >.	

Table 55a Editorial Instructions

Phillip Barber

Broadband Mobile Technologies

Problem:

According to comment #280 regarding Table 55a in IEEE P802.16e/D5, “The editorial instruction is totally wrong. Not all changes are shown with revision marks. Also the proposed change breaks the fixed standard. A MSS is a SS but the reverse is not true.”

Remedy:

Provide proper Editorial instructions for Table 55a in IEEE P802.16e/D5 to resolve issue with Technical Binding comment #280 in comment database IEEE 802.16-04/69r1, at Session 34

Remedy 1:

[In 6.3.2.3.26 De/Re-register Command (DREG-CMD) message, page 29, line 21, replace Table 55a with table below including corrected Editorial instruction]:

Table 55a— Action Codes and actions

Action Code	Action
0x00	SS shall <u>immediately terminate service with the BS</u> leave the current channel and attempt <u>network entry</u> to access another <u>BS</u> channel .
0x01	SS shall listen to the current channel <u>BS</u> but shall not transmit until an RES-CMD message or DREG_CMD with an Action Code <u>0x00</u> that allows transmission is received.
0x02	SS shall listen to the current channel <u>BS</u> but only transmit on the Basic, Primary Management, and Secondary Management Connections.
0x03	SS shall return to normal operation and may transmit on any of its active connections.
0x04	SS shall terminate current Normal Operations with the BS; the BS shall transmit this action code only in response to any SS DREG-REQ message.
<u>0x05</u>	<u>require MSS de-registration from Serving BS and request initiation of MSS Idle Mode</u>
<u>0x06</u>	<u>The MSS may retransmit the DREG-REQ message after the time duration (REQ-duration) provided in the message</u>
<u>0x07</u>	<u>The MSS shall not retransmit the DREG-REQ message and shall wait the DREG-CMD message</u>
0x05 <u>0x08</u> – 0xFF	<i>reserved</i>
