Re: Call for Contributions on IEEE 802.16m System Description Document ToC 802.16m-07_040

Abstract **Proposed ToC for the IEEE 802.16m System Description Document**

Purpose Discussion and Approval

Notice *This document does not represent the agreed views of the IEEE 802.16 Working Group or any of its subgroups. It represents only the views of the participants listed in the "Source(s)" field above. It is offered as a basis for discussion. It is not binding on the contributor(s), who reserve(s) the right to add, amend or withdraw material contained herein.*

Release The contributor grants a free, irrevocable license to the IEEE to incorporate material contained in this contribution, and any modifications thereof, in the creation of an IEEE Standards publication; to copyright in the IEEE's name any IEEE Standards publication even though it may include portions of this contribution; and at the IEEE's sole discretion to permit others to reproduce in whole or in part the resulting IEEE Standards publication. The contributor also acknowledges and accepts that this contribution may be made public by IEEE 802.16.

Patent Policy The contributor is familiar with the IEEE-SA Patent Policy and Procedures:
<http://standards.ieee.org/guides/bylaws/sect6-7.html#6> and
<http://standards.ieee.org/guides/opman/sect6.html#6.3>.

Further information is located at <http://standards.ieee.org/board/pat/pat-material.html> and

Table of Contents

1	Scope.....	6
2	References.....	6
3	Definition, Symbols, Abbreviation	6
4	Abstract.....	6
5	Overall Network Architecture (informative).....	6
6	IEEE 802.16m System Reference Model.....	6
7	IEEE 802.16m Top Level System State Diagrams.....	6
8	IEEE 802.16m Air-Interface Protocol Structure.....	6
9	Convergence Sub-Layer (CS).....	7
9.1	Data Plane Functions.....	7
9.1.1	Packet Header Compression	7
9.1.2	Packet Classification.....	7
9.1.3	CS PDU Construction.....	7
10	MAC Common Part Sub-layer.....	7
10.1	Resource Control and Management Functions.....	7
10.1.1	System Configuration Management.....	7
10.1.2	Unicast Control Plane Functions	7
10.1.2.1	Network Entry Management	7
	Connection Management.....	7
10.1.2.2	Mobility Management.....	7
	Idle Mode Management	7
10.1.2.3	7
10.1.2.4	Location Management	7
10.1.2.5	Security Management	7
10.1.3	Multicast and Broadcast Service Control Plane Functions	7
10.1.3.1	Multicast and Broadcast Service Session Management	7
10.1.3.2	Security Management	7
10.1.4	Radio Resource Management (RRM).....	7
10.1.5	Routing (New for relay)	7
10.1.6	Multi-carrier Support (New).....	7
10.1.7	Self-Configuration Procedures (New)	7
10.2	Medium Access Control Functions.....	7
10.2.1	Control Plane Functions.....	7
10.2.1.1	Sleep Mode Management	7
10.2.1.2	Data Forwarding (New for relay)	7
10.2.1.3	QoS Control.....	7
10.2.1.4	Physical Layer Control Functions	8
	10.2.1.4.1 Ranging.....	8

10.2.1.4.2 Link Adaptation	8
10.2.1.4.2.1 H-ARQ.....	8
10.2.1.4.2.2 Power Control	8
10.2.1.4.2.3 Adaptive Modulation and Coding.....	8
10.2.1.4.3 Interference Management.....	8
10.2.1.5 Logical Control Channels	8
10.2.1.6 Multi-Radio Coexistence and Coordination Mechanisms (New)	8
10.2.1.7 Scheduling and Resource Multiplexing Functions.....	8
10.2.2 Data Plane Functions	8
10.2.2.1 ARQ Functions.....	8
10.2.2.1.1 Duplicate Detection and Sequencing.....	8
10.2.2.2 MAC PDU Formation	8
10.2.2.3 MAC Headers and Sub-headers	8
10.2.2.4 SDU Fragmentation and Packing.....	8
10.3 MAC Management Messages	8
11 Security Sub-layer.....	8
11.1 Data plane security functions and protocols	8
11.1.1 Privacy and integrity	8
11.1.2 Confidentiality support for user data.....	8
11.2 Control plane security functions and protocols	8
11.2.1 Authentication	8
11.2.2 Privacy and integrity	8
11.2.2.1 User location privacy support	8
11.2.2.2 Confidentiality support for control signalling	9
11.2.3 Key Management.....	10
12 Physical Layer.....	10
12.1 Multiple Access Method	10
12.2 Duplexing Modes	10
12.3 OFDMA Numerology	10
12.4 Frame Structure	10
12.5 Channel Coding and Modulation	10
12.6 Multi-Antenna Techniques	10
12.6.1 Coding for Multi-Antennas	10
12.6.1.1 Single/Multi-Codeword to Layer Mapping	10
12.6.1.2 Layer to Antenna Mapping	10
12.6.2 Single user MIMO/Beamforming	10
12.6.3 Multi-user MIMO (New)/Beamforming	10
12.6.4 MIMO/Beamforming Mode Adaptation.....	10
12.7 Physical Layer Procedures	10
12.7.1 Measurement and Reporting	10
12.7.2 System Acquisition.....	10
12.7.3 Link Adaptation	10
12.7.3.1 Adaptive Modulation and Coding	10

12.7.3.2	Power control	10
12.7.4	H-ARQ Procedures.....	10
13	RF Requirements.....	10
13.1	Out of Band Emissions	10
13.2	Spectral mask for mobile station.....	10
13.3	Spectral mask for the base station	11
14	Deployment Scenarios.....	11
14.1	IEEE 802.16e and 802.16m Mixed System Operation.....	11
14.2	IEEE 802.16m only System Operation	11
	Appendix A1 Feasibility Studies for New Features	12
A1.1	Scenario and Feasibility for Relay Operation	12
A1.2	Scenario and Feasibility for Self Organization Network Operation	12
A1.3	Scenario and Feasibility for Multi-carrier Operation.....	12
A1.4	Scenario and Feasibility for Multi-radio coexistence and coordination mechanisms	12
	Appendix A2 Performance Evaluation and Verification.....	12

1 Scope

2 References

3 Definition, Symbols, Abbreviation

4 Abstract

5 Overall Network Architecture (informative)

<Editors Note: Refer to WiMAX Forum Network Working Group Specifications in this section>

6 IEEE 802.16m System Reference Model

<Editors Note: This section describes system reference model in for those functions introduced in the 802.16m air interface>

7 IEEE 802.16m Top Level System State Diagrams

<Editors Note: To capture only the top level states of the mobile stations, base stations like for example: Initialization/DL Scan, Active State, Sleep Mode, Idle Mode etc. Detailed feature specific state diagrams will be captured elsewhere in the respective sections.>

8 IEEE 802.16m Air-Interface Protocol Structure

9 Convergence Sub-Layer (CS)

9.1 Data Plane Functions

- 9.1.1 Packet Header Compression
- 9.1.2 Packet Classification
- 9.1.3 CS PDU Construction

10 MAC Common Part Sub-layer

10.1 Resource Control and Management Functions

- 10.1.1 System Configuration Management
- 10.1.2 Unicast Control Plane Functions
 - 10.1.2.1 Network Entry Management
 - 10.1.2.2 Connection Management/Mobility Management
 - 10.1.2.3 Idle Mode Management
 - 10.1.2.4 Location Management
 - 10.1.2.5 Security Management
- 10.1.3 Multicast and Broadcast Service Control Plane Functions
 - 10.1.3.1 Multicast and Broadcast Service Session Management
 - 10.1.3.2 Security Management
- 10.1.4 Radio Resource Management (RRM)
- 10.1.5 Routing (New for relay)
- 10.1.6 Multi-carrier Support (New)
- 10.1.7 Self-Configuration Procedures (New)

10.2 Medium Access Control Functions

- 10.2.1 Control Plane Functions
 - 10.2.1.1 Sleep Mode Management
 - 10.2.1.2 Data Forwarding (New for relay)
 - 10.2.1.3 QoS Control

10.2.1.4 Physical Layer Control Functions

10.2.1.4.1 Ranging

10.2.1.4.2 Link Adaptation

10.2.1.4.2.1 H-ARQ

10.2.1.4.2.2 Power Control

10.2.1.4.2.3 Adaptive Modulation and Coding

10.2.1.4.3 Interference Management

10.2.1.5 Logical Control Channels

10.2.1.6 Multi-Radio Coexistence and Coordination Mechanisms (New)

10.2.1.7 Scheduling and Resource Multiplexing Functions

10.2.2 Data Plane Functions

10.2.2.1 ARQ Functions

10.2.2.1.1 Duplicate Detection and Sequencing

10.2.2.2 MAC PDU Formation

10.2.2.3 MAC Headers and Sub-headers

10.2.2.4 SDU Fragmentation and Packing

10.3 MAC Management Messages

11 Security Sub-layer

11.1 Data plane security functions and protocols

11.1.1 Privacy and integrity

11.1.2 Confidentiality support for user data

11.2 Control plane security functions and protocols

11.2.1 Authentication

11.2.2 Privacy and integrity

11.2.2.1 User location privacy support

11.2.2.2 Confidentiality support for control signalling

11.2.3 Key Management

12 Physical Layer

12.1 Multiple Access Method

12.2 Duplexing Modes

12.3 OFDMA Numerology

12.4 Frame Structure

12.5 Channel Coding and Modulation

12.6 Multi-Antenna Techniques

12.6.1 Coding for Multi-Antennas

12.6.1.1 Single/Multi-Codeword to Layer Mapping

12.6.1.2 Layer to Antenna Mapping

12.6.2 Single user MIMO/Beamforming

12.6.3 Multi-user MIMO (New)/Beamforming

12.6.4 MIMO/Beamforming Mode Adaptation

12.7 Physical Layer Procedures

12.7.1 Measurement and Reporting

12.7.2 System Acquisition

12.7.3 Link Adaptation

12.7.3.1 Adaptive Modulation and Coding

12.7.3.2 Power control

12.7.4 H-ARQ Procedures

13 RF Requirements

13.1 Out of Band Emissions

13.2 Spectral mask for mobile station

13.3 Spectral mask for the base station

14 Deployment Scenarios

14.1 IEEE 802.16e and 802.16m Mixed System Operation

14.2 IEEE 802.16m only System Operation

Appendix A1 Feasibility Studies for New Features

A1.1 Scenario and Feasibility for Relay Operation

A1.2 Scenario and Feasibility for Self Organization Network Operation

A1.3 Scenario and Feasibility for Multi-carrier Operation

A1.4 Scenario and Feasibility for Multi-radio coexistence and coordination mechanisms

Appendix A2 Performance Evaluation and Verification
