SNR Budget Analysis for 25 Gb/s over Backplane Channels

***IEEE 802.3 100GCU Study Group
Interim Meeting, Incline Village, NV***

Ziad Hatab
May 24-25, 2011

Outline

- ▶ IEEE 100GCU Channel Analysis:
 - ▶ Consider TE connectivity channel models¹:
 - 29.8” simulated Backplane (BP) channel with Megtron-6 material
 - 42.8” simulated BP channel with Megtron-6 material
 - 29.8” simulated BP channel with Nelco4000-6 material
 - 42.8” simulated BP channel with Nelco4000-6 material
 - 27” measured BP channel with Megtron-6 material
 - Revised 27” measured BP channel with Megtron-6 material
 - ▶ Consider FCI channel models¹:
 - 27.6” simulated BP 8 channels with Megtron-6 and Nelco4000-13SI material
 - ▶ Compare SNR margins at 25 Gb/s using NRZ and PAM-4
 - ▶ Investigate performance at 25-28 Gb/s
- ▶ Proposals on reach objectives

TE STRADA Whisper Megtron-6 Channels: 29.8" & 42.8"

TE STRADA Whisper Nelco4000-6 Channels: 29.8" & 42.8"

TE STRADA Whisper Megtron-6 Channel: 27"

Revised TE STRADA Whisper Megtron-6 Channel: 27"

FCI Megtron-6/Nelco400013SI Channel: 27.6"

Simulations Parameters

| Channel | Channel | Link | Transmitter | Receiver |
|---|---|--|---|---|
| Transmitter | Receiver | | | |
| Device Package: Pkg35mm_T21mm115ohm LoXtalk_BGALoXtalk.s8p | Device Package: Pkg35mm_T21mm115ohm LoXtalk_BGALoXtalk.s8p | Bit Rate: 25 Gb/s | Test Pattern: 64B/66B | Random Noise: -140 dBm/Hz (1.18 mv RMS PAM-4) (1.67 mv RMS NRZ) |
| Device Package Crosstalk: NA | Device Package Crosstalk: NA | Modulation: PAM-4 NRZ | Vpp: 1.0 v | Deterministic Jitter: NA |
| R₁: 50 ohm | R₂: 50 ohm | Signaling Rate: 12.5 GHz 25 GHz | De-Emphasis: NA | Random Jitter: NA |
| C₁: 0 F | C₂: 0 F | Number of symbols simulated: 50000 | Deterministic Jitter: 11.3 ps (peak-to-peak) Sinusoidal at 5 MHz | CT Filter: NA |
| Near-End Crosstalk: 6 aggressors (TE) 4 aggressors (FCI) Asynchronous Victim Tx replicated | | Target symbol error ratio: 10 ⁻¹⁵ | DCD: NA | Equalizer Structure: DFE: 12 FFE: 8 (T-Spaced) LMS |
| Far-End Crosstalk: 2 aggressors (TE) 3 aggressors (FCI) Asynchronous Victim Tx replicated | | | Random Jitter: 6.6 ps (RMS) | CDR: Ideal |

SNR Margin Results at 25 Gb/s

- ▶ For Megtron-6 Channels:
 - ▶ PAM-4 and NRZ have comparable performance:
 - $7 \text{ dB} \leq \text{IL at } f_{\text{Nyquist-PAM4}} - f_{\text{Nyquist-NRZ}} \leq 10 \text{ dB}$
- ▶ For Nelco4000-6 Channels:
 - ▶ PAM-4 has 3 dB of additional SNR margin over NRZ at 43".
 - ▶ PAM-4 has 1.5 dB of additional SNR margin over NRZ at 30".

SNR Margin Results for 25-28 Gb/s

- ▶ There is about 0.6 dB of SNR margin loss per 1Gb/s.
- ▶ Simulated levels of crosstalk, return loss, and insertion loss deviation from TE STRADA Whisper Nelco channels are relatively low:
 - ▶ Actual 10GBASE-KR channels expected to have higher impairment levels.
 - ▶ 25Gb/s Nelco margins may be lower.
 - ▶ Account for this uncertainty by increasing required margin.

Summary

| Channel | Channel Data Type | Total Length (inches) | Materials (Line Card Backplane) | Line Code | IL at 6.25 GHz (dB) | IL at 12.5 GHz (dB) | Required FEC NCG ¹ for 0 dB margin at 10 ⁻¹⁵ BER (dB) | Required FEC NCG for 3 dB margin at 10 ⁻¹⁵ BER (dB) |
|------------------|-------------------|-----------------------|---------------------------------|-----------|---------------------|---------------------|---|--|
| TE Whisper | Simulated | 42.8 | Nelco 4000-6 Nelco 4000-6 | PAM-4 | -27 | -49 | 9.3 | 12.3 |
| TE Whisper | Simulated | 29.8 | Nelco 4000-6 Nelco 4000-6 | PAM-4 | -19 | -34 | 4.0 | 7.0 |
| TE Whisper | Simulated | 42.8 | Megtron-6 Megtron-6 | NRZ | -16 | -26 | 2.9 | 5.9 |
| TE Whisper | Simulated | 29.8 | Megtron-6 Megtron-6 | NRZ | -11 | -18 | 0 | 1.7 |
| FCI | Simulated | 27.6 | Megtron-6 Nelco 4000-13SI | NRZ | -10 | -18 | 0 | 2.5 ² |
| TE Whisper | Measured | 27 | Megtron-6 Megtron-6 | NRZ | -11 | -20 | 0 | 2.8 |
| TE Whisper (Rev) | Measured | 27 | Megtron-6 Megtron-6 | NRZ | -11 | -20 | 0 | 2.3 |

¹: Net Coding Gain

²: Average over 8 channels

Improving SNR Margins

- ▶ Given nature of channels provided, not much can be done to improve performance on Nelco channels:
 - ▶ Low crosstalk levels
 - ▶ Low insertion loss deviation (ILD) levels
 - ▶ Low return loss (RL) levels
 - ▶ 8FFE/12DFE equalizer is very close to optimum
- ▶ Need to increase V_{pp} beyond 1v to improve SNR margins on Nelco channels in particular above 30”.
- ▶ $V_{pp} = 1v$ seems adequate for Megtron channels up to 40” and Nelco channels up to 30”.

Proposed Reach Objectives

► Proposal 1:

- Support for 10GBASE-KR channels up to 40" (1m):
 - PAM-4
 - Higher V_{pp}
 - FEC with NCG according to V_{pp}
- Support for 100GCU channels up to 40" (1m):
 - NRZ
 - $V_{pp} = 1v$
 - FEC with NCG of 6 dB

► Proposal 2:

- Support for 10GBASE-KR channels up to 30" (0.75m) and 100GCU channels up to 40" (1m) :
 - NRZ
 - $V_{pp} = 1v$
 - FEC with NCG of 7 dB
 - On measured 10GBASE-KR channels with higher levels of crosstalk, return loss, and reflections, V_{pp} and the required FEC NCG may need to increase or 30" reach needs to decrease.

The background is a dark blue gradient with abstract white and light blue line art, including circles and horizontal lines. A large, light blue rounded rectangle is centered on the page, containing the text 'BACKUP SLIDES'.
