802.3bz Link Segment Considerations
Waikola, HI
July 2015

Chris DiMinico
MC Communications/Panduit
cdiminico@ieee.org

Summary

- **Development of baseline for 802.3bz Link Segments.**
    - **Within link segment – e.g., IL, RL, etc.**
    - **Between link segments – Alien**

- **Proposal for Link Segment specifications in Clause 126.**

802.3bz Objectives

## Next Generation Enterprise Access BASE-T PHY Objectives

- Support full duplex operation only
- Preserve the 802.3 / Ethernet frame format utilizing the 802.3 MAC
- Preserve minimum and maximum Frame Size of current 802.3 standard
- Support Auto-Negotiation (Clause 28)
- Support optional Energy Efficient Ethernet (Clause 78)
- Support local area networks using point-to-point links over structured cabling topologies
- Do not preclude meeting FCC and CISPR EMC requirements
- Support PoE (Clause 33)
  - including amendments made by 802.3bt "DTE Power via MDI over 4-Pair Task Force"
- Support MAC data rates of 2.5 Gb/s and 5 Gb/s
- Support a BER better than or equal to 10^{-12} at the MAC/PLS service interface (or the frame loss ratio equivalent)
- Select copper media from ISO/IEC 11801:2002, with any appropriate augmentation to be developed through work of 802.3 in conjunction with ISO/IEC JTC 1/SC 25/WG3 and TIA TR42
- Define a 2.5 Gb/s PHY for operation over
  - Up to at least 100m on four-pair Class D (Cat5e) balanced copper cabling on defined use cases and deployment configurations
- Define a 5 Gb/s PHY for operation over
  - Up to at least 100m on four-pair Class E (Cat6) balanced copper cabling on defined use cases and deployment configurations
  - Up to 100m on four-pair Class D (Cat5e) balanced copper cabling on defined use cases and deployment configurations

IEEE 802.3 NGEABT Objectives approved by IEEE 802.3, March 12, 2015   Berlin, DE   1

802.3bz –Link Segment Characteristics
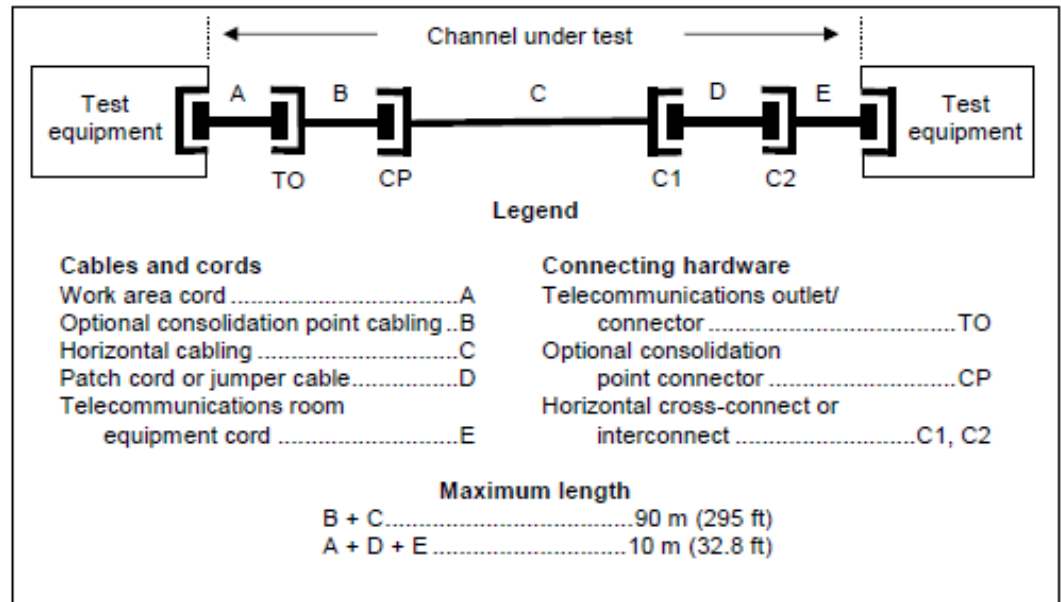

IEEE Cabling Topology

- IEEE 802.3 Twisted-Pair Link Segment

10BASE-T/100BASE-T/1000BASE-T/10GBASE-T

Channel and Permanent Link

•Channel test configuration to emulate <u>IEEE link segments</u> enabling IEEE to reference cabling standards .

•Channel and permanent link transmission requirements developed from cables, cords, and connecting hardware transmission requirements

Deployment configuration objectives

- **Define a 2.5 Gb/s PHY for operation over**
  - **Up to at least 100m on four-pair Class D (Cat5e) balanced copper cabling on defined use cases and deployment configurations**
- **Define a 5 Gb/s PHY for operation over**
  - **Up to at least 100m on Class E (Cat6) balanced copper cabling on defined use cases and deployment configurations**
  - **Up to 100m on Class D (Cat5e) balanced copper cabling on defined use cases and deployment configurations**

1) **Use cases and deployment configurations for 2.5 Gb/s PHY for operation over**
   - **Up to at least 100m on four-pair Class D (Cat5e) balanced copper cabling**

2) **Use cases and deployment configurations for a 5 Gb/s PHY for operation over**
   - **Up to at least 100m on Class E (Cat6) balanced copper cabling**

3) **Use cases and deployment configurations for a 5 Gb/s PHY for operation over**
   - **Up to 100m on Class D (Cat5e) balanced copper cabling**

- **Use case based deployment configurations not required for PHYs demonstrating operation over "worse case" cabling configurations (4 connector with cable (6x1) tie wrapped every 8").**

802.3bz –Link Segment Characteristics

126.7 Link segment characteristics

2.5G/5GBASE-T is designed to operate over ISO/IEC 11801 Class D 4-pair balanced cabling that meets the additional requirements specified in this subclause. Each of the 2.5GBASE-T four pairs supports an effective data rate of 626 Mb/s in each direction simultaneously. Each of the 5GBASE-T four pairs supports an effective data rate of 1626 Mb/s in each direction simultaneously. The term "link segment" used in this clause refers to four twisted-pairs operating in full duplex. Specifications for a link segment apply equally to each of the four twisted-pairs. All implementations of the balanced cabling link segment specification shall be compatible at the MDI. It is recommended that the guidelines in TIA TSB-XX, ISO/IEC TR X, ANSI/TIA-568-C.2, and ISO/IEC 11801:2002/Amendment 1 be considered before the installation of 2.5/5GBASE-T equipment for any cabling system.
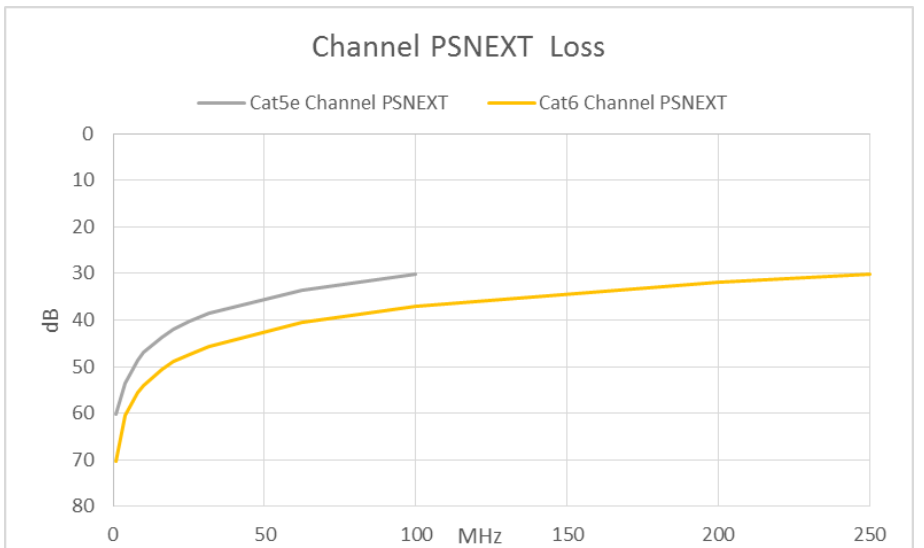

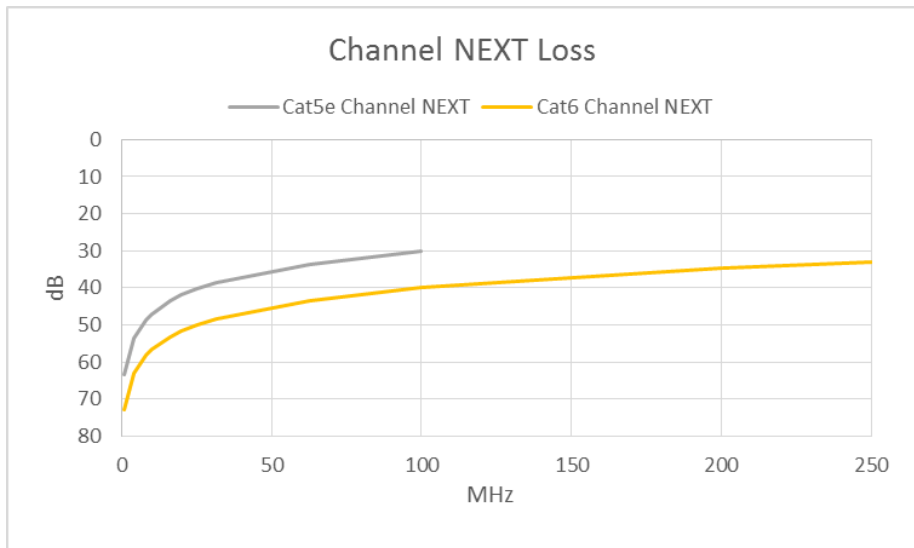

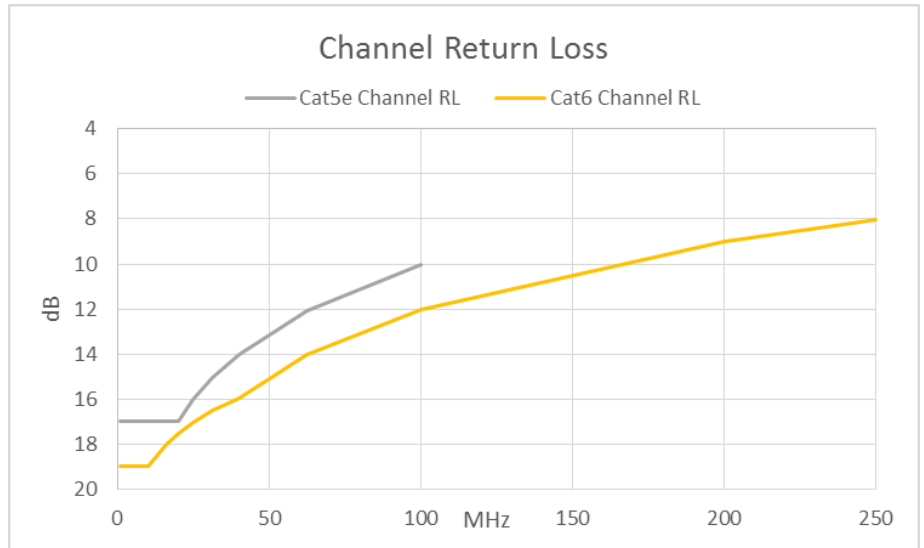

126.7.1 Cabling system characteristics

2.5/5GBASE-T requires 4 pair Class D cabling with a nominal impedance of 100 Ω, as specified in ISO/IEC 11801:2002. Operation on other classes of cabling may be supported if the link segment meets the requirements of 126.7.
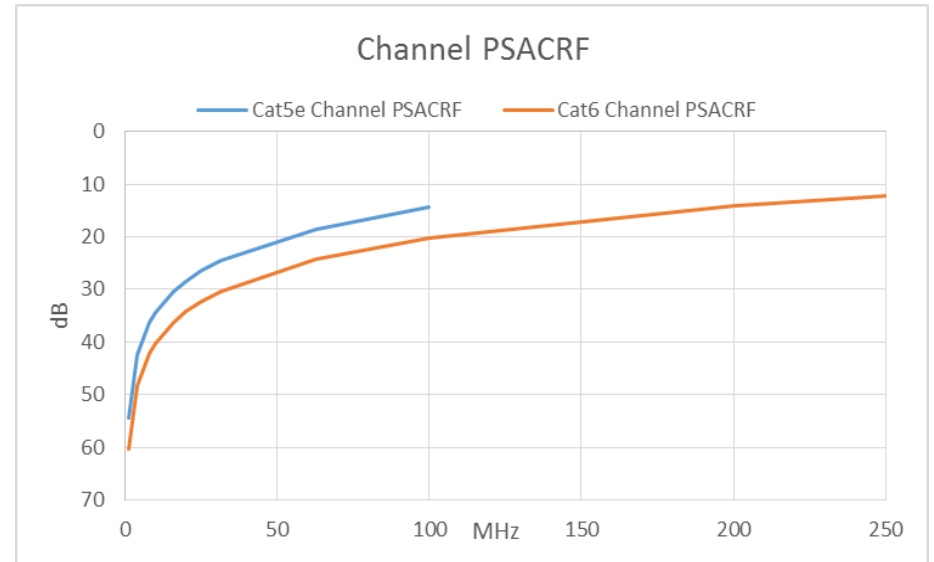

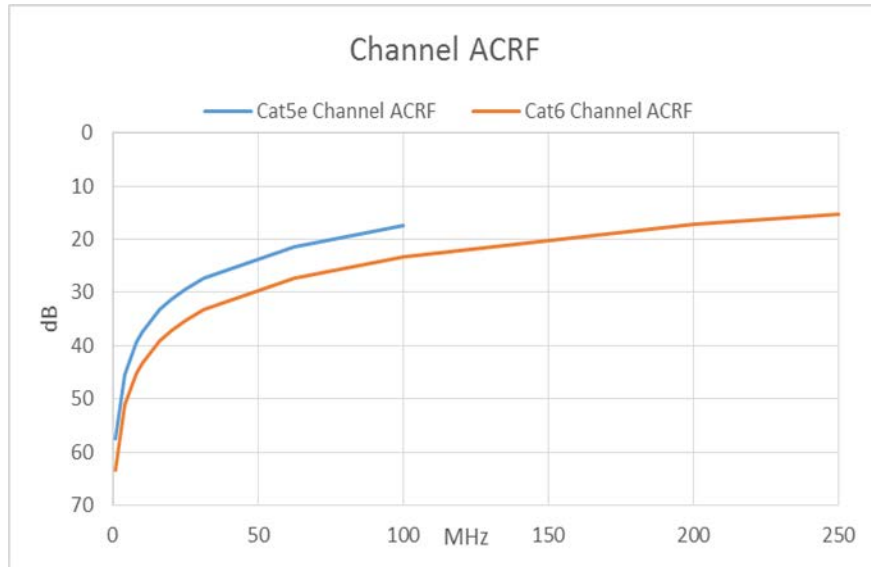

Additionally:

a) 2.5GBASE-T is an ISO/IEC 11801-2002 Class D application, with additional installation requirements and transmission parameters specified in this clause.
b) 5GBASE-T is an ISO/IEC 11801-2002 Class D application, with additional installation requirements and transmission parameters specified in this clause, including extended frequency performance beyond that specified for Class D Channels.
c) The use of shielding is outside the scope of this specification.

Category 5e and Category 6 Cabling

Channel Insertion Loss — Cat5e Channel IL, Cat6 Channel IL

Channel Return Loss — Cat5e Channel RL, Cat6 Channel RL

Channel NEXT Loss — Cat5e Channel NEXT, Cat6 Channel NEXT

Channel PSNEXT Loss — Cat5e Channel PSNEXT, Cat6 Channel PSNEXT

Category 5e and Category 6 Cabling

126.7 Link Segment Specification

• **Define a 2.5 Gb/s PHY for operation over**
  – **Up to at least 100m on four-pair Class D (Cat5e) balanced copper cabling on defined use cases and deployment configurations**

  ▪ **Link Segment option**
    ✓ **Category 5e Cabling**

• **Define a 5 Gb/s PHY for operation over**
  – **Up to at least 100m on Class E (Cat6) balanced copper cabling on defined use cases and deployment configurations**
  – **Up to 100m on Class D (Cat5e) balanced copper cabling on defined use cases and deployment configurations**

  ▪ **Link Segment options**
    ✓ **Category 5e cabling with appropriate augmentation**
    ✓ **Category 6**

126.7 Link Segment Specification Options

- **2.5/ 5 Gb/s PHY Link Segment**
  - **Category 5e cabling with appropriate augmentation on defined use cases and deployment configurations**

- **2.5 Gb/s PHY Link Segment**
  - **Category 5e cabling on defined use cases and deployment configurations**
- **5 Gb/s PHY Link Segment**
  - **Category 6 on defined use cases and deployment configurations [satisfies up to 100m Class D (Cat5e) m(TBD)]**
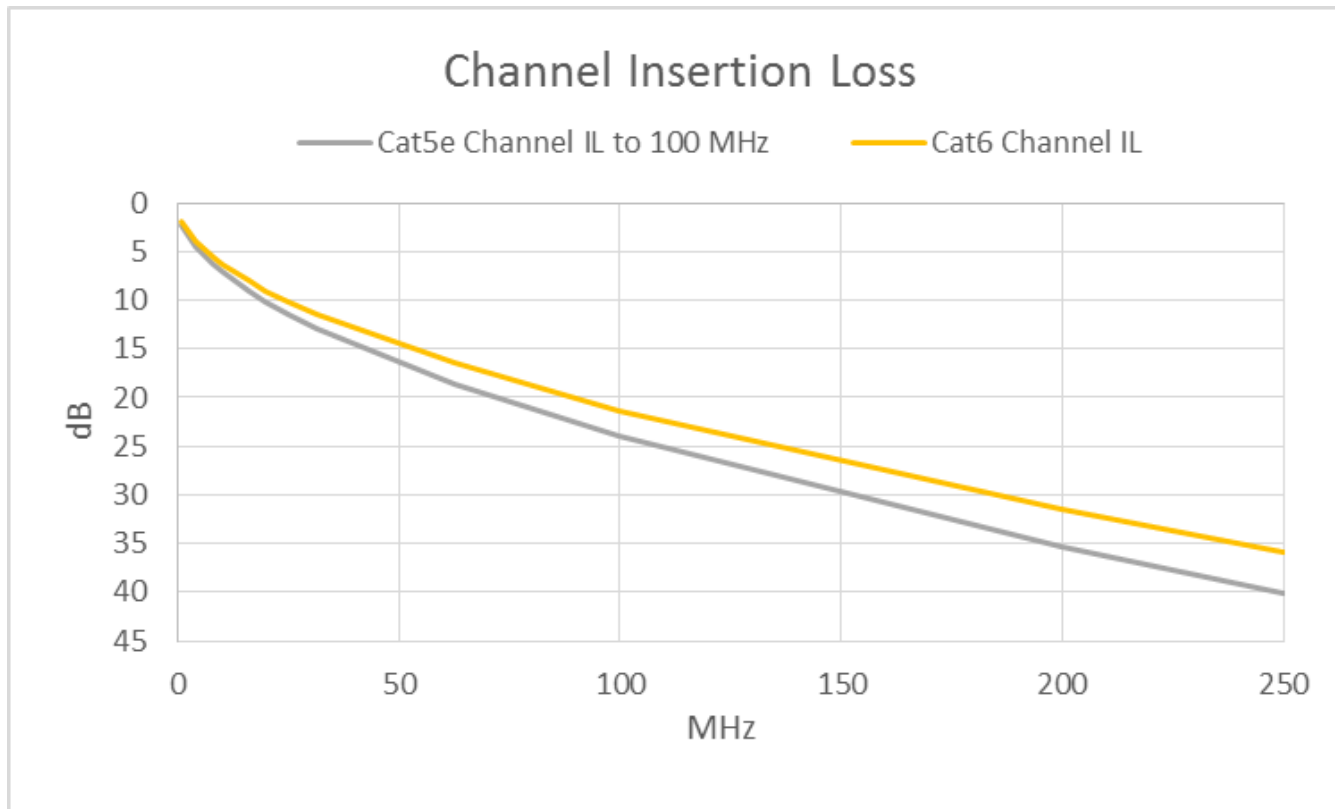

Link Segment 2.5/5 Gb/s PHY considerations

Next Generation Enterprise BASE-T Access

Between 1G and 10G, There's Lots of Room for BASE-T PHYs

IEEE 802.3 Call For Interest – November 2014 San Antonio

Link Segment 5 Gb/s PHY considerations

- **5 Gb/s PHY Link Segment BW > 200 MHz**
 - **Cat 6 - ~4 dB margin at 200 MHz from Cat5e extended to 250 MHz**

Proposal: Link Segment IL

Link Segment =1.02*(1.967*SQRT(f)+0.023*(f)+0.05/SQRT(f))+4*0.04*SQRT(f) 1 < /= f </= 250 MHz

Proposal: Link Segment RL

$RL =- 17$ $1 </= f < 100$ MHz
         $17- 10*log(f/20)$ $20 < /= f </= 250$ MHz

Please note: Validated with TR42 RL models
To be provided in update

Proposal: Link Segment NEXT/PSNEXT

$NEXT = -20*LOG(10^{\wedge}(-(35.3-15*LOG(f/100)) /20) +2* 10^{\wedge}(-(43-20*LOG(f/100)) /20))$ $1 </= f </= 100$ MHz
$-20*LOG(10^{\wedge}(-(35.3-15*LOG(f/100)) /20) +2* 10^{\wedge}(-(43-40*LOG(f/100)) /20))$ $100 < f </= 250$ MHz

$PSNEXT = -20*LOG(10^{\wedge}(-(32.3-15*LOG(f/100)) /20) +2* 10^{\wedge}(-(40-20*LOG(f/100)) /20))$ $1 </= f </= 100$ MHz
$-20*LOG(10^{\wedge}(-(32.3-15*LOG(f/100)) /20) +2* 10^{\wedge}(-(40-40*LOG(f/100)) /20))$ $100 < f </= 250$ MHz

802.3bz –Link Segment Characteristics

Proposal: Link Segment ACRF/PSACRF

$ACRF = -20*LOG(10\wedge(-(23.8-20*LOG(f/100)) /20) +4* 10\wedge(-(32.1-20*LOG(f/100)) /20))$ $1 </= f </= 100 \text{ MHz}$
TBD $100 < f </= 250 \text{ MHz}$

$PSACRF = -20*LOG(10\wedge(-(20.8-20*LOG(f/100)) /20) +4* 10\wedge(-(32.1-20*LOG(f/100)) /20))$ $1 </= f </= 100 \text{ MHz}$
TBD $100 < f </= 250 \text{ MHz}$

Alien Crosstalk – 10GBASE-T

55.7.3 Coupling parameters between link segments

- **55.7.3.1.1 Multiple disturber power sum alien near-end crosstalk (PSANEXT) loss**

    - **55.7.3.1.2 PSANEXT loss to insertion loss ratio requirements**

    - **PSANEXT limits specified in 55.7.3.1.1 [Equation (55–23) and Equation (55–25)]**

- **55.7.3.2 Multiple disturber alien far-end crosstalk (MDAFEXT) loss**

    - **55.7.3.2.1 Multiple disturber power sum alien equal level far-end crosstalk (PSAELFEXT)**
    - **55.7.3.2.2 PSAELFEXT to insertion loss ratio requirements**

    - **PSAELFEXT limits specified in 55.7.3.2. [Equation (55–32) and Equation (55–34)]**

Alien Crosstalk – 10GBASE-T

- **55.7.3.3 Alien crosstalk margin computation**

The alien crosstalk margin computation can be applied in the event that the PSANEXT limits specified in 55.7.3.1.1 [Equation (55–23) and Equation (55–25)] or the PSAELFEXT limits specified in 55.7.3.2. [Equation (55–32) and Equation (55–34)] are not met. T he alien crosstalk margin is specified for each of the individual 4-pairs as well as the average "across the 4-pairs".

Proposal: Alien Crosstalk

- **Use Salz SNR as basis for link segment alien crosstalk specifications (alternative to ACMC)**

- **Alien crosstalk cabling limits are not specified for Cat5e or Cat6**

- **Normative alien crosstalk cabling limits are not necessary to consider PHY performance**

- **Salz SNR is used among PHY developers (and others of course) to assess link performance**
