David Law noted that P802.3au contained information about isolation and was created to modify 802.3af and the lack of isolation requirement in the published standard.

George Zimmerman reminded the group that some of the clauses where IEC 60950 is referenced are no longer under maintenance. Need to determine if it is acceptable to not update those sections.

It was determined that the scope of the Ad Hoc needs to be adjusted.

After concluding the agenda for the meeting the Chair adjourned the meeting at 9:36am.
