

Stressed sensitivity - Nom. Sensitivity if constant Rx noise

Specped by stressed sensitivity: favours fast receivers by up to 0.4 dB on fast links?

Spec'ed by nominal sensitivity: favours slow receivers by up to 0.4 dB on slow links?

**Spec'ed by sensitivity at 1.5 dB VECP: favours fast receivers
by up to 0.3 dB on fast links?**

Generally more accurate and practical but jitter need to add
